2020-2021

1.1.3 Average percentage of courses having focus on employability/ entrepreneurship/ skill development offered by the institution during the last five years (10)

Sl.No.	Programme code	Programme name	Course name	Course code		Year of Introductio	Link to the relevant
1	CE	CIVIL ENGINEERING	Technical English	118ENT01	Employability - This course will enhance the nuances of language skills where students can identify and rectify their errors in language.	2018-2019	
2	CE	CIVIL ENGINEERING	Engineering Mathematics-I	118MAT02	Employability-This course will help the students to model the real life problems	2018-2019	
3	CE	CIVIL ENGINEERING	Engineering Graphics	118EGT05	Employability- The fundamentals and application of Engineering Graphics drive the students as an Engineer since drawing is the language of Engineers.	2018-2019	
4	CE	CIVIL ENGINEERING	Enginering Practice Laboratory	118EPP08	Skill Development- This course will make the students to practice with basic engineering practices like carpentry, welding foundry, electrical and electronics.	2018-2019	
5	CE	CIVIL ENGINEERING	Communicative English	218ENT01	Employability - This course will help students develop their communication skillsskills	2018-2019	
6	CE	CIVIL ENGINEERING	Engineering Mathematics-II	218MAT02	Employability-This course will help the students to model the real life problems	2018-2019	
7	CE	CIVIL ENGINEERING	Engineering Mechanics	218EMT04	Employability- Concepts of Engineering Mechanics and its applications are enabling the students to perform better as an engineer during their employability.	2018-2019	
8	CE	CIVIL ENGINEERING	Physics for Civil Engineering	218BSE05	Employability - Content in the syllabus will help to Integrate the principles in the projects undertaken in field of Civil Engineering	2018-2019	
9	CE	CIVIL ENGINEERING	Problem Solving and Python Programming	218CDP05	Skill development - Course helps to learn the fundamental concepts in python language	2018-2019	
10	CE	CIVIL ENGINEERING	Engineering Mathematics-III	318MAT01	Employability-This course will help the students to model the real life problems	2019-2020	
11	CE	CIVIL ENGINEERING	Mechanics of Solids	318CET02	Employability-gain knowledge on stress,strain and material properties used in construction industry	2019-2020	
12	CE	CIVIL ENGINEERING	Mechanics of Fluids	318CET03	Employability-gain knowledge in behaviour and design of hyrdualic structures	2019-2020	
13	CE	CIVIL ENGINEERING	Construction Materials &Structural Geology	318CET04	Entrepreneurship--gain knowledge in various building materials and construction techniques and geology of earth	2019-2020	
14	CE	CIVIL ENGINEERING	Engineering Survey	318CET05	Entrepreneurship/Skill Develoment-gain knowledge in various surveying techniques and equipments whuich enhances employment opportunities	2019-2020	
15	CE	CIVIL ENGINEERING	Value Education Program	318CET06	Employability- to understand engineering ethics and human values which is important in career throughout	2019-2020	
16	CE	CIVIL ENGINEERING	Engineering Survey Laboratory	318CEP07	Skill Develoment-gain knowledge in various surveying techniques and equipments whuich enhances employment opportunities	2019-2020	
17	CE	CIVIL ENGINEERING	Building Materials & Construction Practices Laboratory	318CEP08	Skill Develoment-gain knowledge in testing of various building materials used in construction	2019-2020	
18	CE	CIVIL ENGINEERING	Building Planning & Drawing	318CEP08	Skill Develoment- gain knowledge in preparing plan and building drawings	2019-2020	
19	CE	CIVIL ENGINEERING	Numerical Methods	418MAT01	Employability-This course will help the students to model the real life problems	2019-2020	
20	CE	CIVIL ENGINEERING	Strength of Materials	418CET02	Employability-gain knowledge on deformation and strains under different load action and response in terms of forces and moments	2019-2020	
21	CE	CIVIL ENGINEERING	Applied Hydraulic Engineering	418CET03	Employability- Concepts of fluid mechanics and applications to fluid machinery will enable the students to perform better as an engineer during their employability	2019-2020	
22	CE	CIVIL ENGINEERING	Geotechnical Engineering	418CET04	Employability-to understand, soil as an engineering material the load- deformation behaviour, through its index and engineering properties	2019-2020	
23	CE	CIVIL ENGINEERING	Water Supply Engineering	418CET05	Employability-gain knowledge in water supply system	2019-2020	
24	CE	CIVIL ENGINEERING	3D Printing and Design	418CEE06	Entrepreneurship/Skill Develoment-gain knowledge in 3D Printing techniques whuich enhances the skill of the student	2019-2020	
25	CE	CIVIL ENGINEERING	Strength of Materials Laboratory	418CEP07	Skill Develoment-gain knowledgen in testing materials for strength	2019-2020	
26	CE	CIVIL ENGINEERING	Hydraulic Engineering Laboratory	418CEP08	Skill Develoment-gain knowledge on various hydraulic engineering problems like open channel flows and hydraulic machines	2019-2020	
27	CE	CIVIL ENGINEERING	Transportation Engineering-I	518CET01	Employability-helps in planning and design of highway structures	2020-2021	
28	CE	CIVIL ENGINEERING	Structural Analysis – I	518CET02	Employability-gain basic knowledge on analysing structures	2020-2021	
29	CE	CIVIL ENGINEERING	Design of RCC Structures	518CET03	Skill Develoment-Design skill of RC memebers helps in design of safe and stable RC structures	2020-2021	

Chairman, Board of Studies
Faculty of Civil Engineering (UG & PG)
Adhiyamaan College of Engineering (Autonomous)
Hosur - 635 130

30	CE	CIVIL ENGINEERING	Foundation Engineering	518CET04	Employability-suggest and design a suitable foundation for a structure depending on the type of soil. Also understand and analyze different types of earth pressure and perform stability checks for retaining wall	2020-2021
31	CE	CIVIL ENGINEERING	Concrete Technology	518CET05	Employability- This course develops skills in concreting technology	2020-2021
32	CE	CIVIL ENGINEERING	Remote Sensing	518CEE01	Employability-gai knowledge on different types types of remote sensing platforms and sensors	2020-2021
33	CE	CIVIL ENGINEERING	Environmental Engineering Laboratory	518CEP07	Skill Develoment-gain knowledge on water testing and environmental pollutants	2020-2021
34	CE	CIVIL ENGINEERING	Soil Mechanics Laboratory	518CEP08	Skill Develoment-knowledge on soil tests and investigations helps in civil engineering projects	2020-2021
35	CE	CIVIL ENGINEERING	Computer Aided Design - I	518CEP09	Entrepreneurship/Skill Develoment-ain knowledge on software used for drafting and it helps in employment opportunities	2020-2021
36	CE	CIVIL ENGINEERING	Transportation Engineering-II	618CET01	Employability-gain skills to plan and design Railways , Airports and Harbour structures	2020-2021
37	CE	CIVIL ENGINEERING	Structural Analysis – II	618CET02	Employability-gain knowledge in analysis of structures to find design forces	2020-2021
38	CE	CIVIL ENGINEERING	Design of Steel Structures	618CET03	Skill Develoment-Design of steel structures as per IS codes is essential for a civil engineer. He can design steel structures such as beams, columns, roof truss, gantry girder, etc.	2020-2021
39	CE	CIVIL ENGINEERING	Sanitary Engineering	618CEE02	Employability-gain knowledge to design various unit operations and processes for sewage treatment system and hence can handle waste water disposal issues	2020-2021
40	CE	CIVIL ENGINEERING	Groundwater Engineering	618CEE09	Employability - Enhance the knowledge on well characteristics and groundwater exploration.	2020-2021
41	CE	CIVIL ENGINEERING	Personality Development	618ARO01	Employability - Develop qualities suited for the profession.	2020-2021
42	CE	CIVIL ENGINEERING	Computer Aided Design - II	618CEP07	Entrepreneurship/Skill Develoment-gain knowledge on software used for drafting and it helps in employment opportunities	2020-2021
43	CE	CIVIL ENGINEERING	Concrete and Highway Engineering Laboratory	618CEP08	Skill Develoment-find the mechanical properties of concrete and assess the quality of bitumen through laboratory tests.	2020-2021
44	CE	CIVIL ENGINEERING	Extensive Survey Camp	618CEP09	Entrepreneurship/Skill Develoment-through hands on training and applications on survey methods and equipments helps in employability opportunities as a surveyor	2020-2021
45	CE	CIVIL ENGINEERING	Groundwater Engineering	618CEE09	Employability - Enhance the knowledge on well characteristics and groundwater exploration.	2020-2021
46	CE	CIVIL ENGINEERING	Personality Development	618ARO01	Employability - Develop qualities suited for the profession.	2020-2021
47	CE	CIVIL ENGINEERING	Computer Aided Design - II	618CEP07	Entrepreneurship/Skill Develoment-gain knowledge on software used for drafting and it helps in employment opportunities	2020-2021
48	CE	CIVIL ENGINEERING	Concrete and Highway Engineering Laboratory	618CEP08	Skill Develoment-find the mechanical properties of concrete and assess the quality of bitumen through laboratory tests.	2020-2021
49	CE	CIVIL ENGINEERING	Estimation and Quantity Surveying	715CET01	Entrepreneurship/Skill Develoment -Knowledge in cost estimation and valuation enhances the job opportunity in the construction field	2018-2019
50	CE	CIVIL ENGINEERING	Ground Improvement Techniques	715CET02	Skill Develoment-Knowledge in ground improvement techniques helps to take up jobs related to Bridge constructions. Also aquires knowledge on the reinforcement details and the use of Geotextiles for filtration, drainage and separation in road and other works.	2018-2019
51	CE	CIVIL ENGINEERING	Principles of RS and GIS	715CEE01	Employability-Know about the types of sensors used in Remote sensing.Work on spatial and Non spatial data in GIS Environment	2018-2019
52	CE	CIVIL ENGINEERING	Architecture & Town Planning	715CEE15	Employability-Knowledge in Urban and regional planning helps in taking up smart city projects and grow as an entreprenuer	2018-2019
53	CE	CIVIL ENGINEERING	Computer Aided Design Laboratory - II	715CEP07	Entrepreneurship/Skill Develoment-gain knowledge on software used for drafting and it helps in employment opportunities	2018-2019
54	CE	CIVIL ENGINEERING	Employability Skills Laboratory	715CEP08	Entrepreneurship/Skill Develoment - gain field knowledge in vrious Civil Engineering subjects	2018-2019
55	CE	CIVIL ENGINEERING	Design Project	715CEP09	Entrepreneurship/Skill Develoment - Students develop their skills in doing research or desgin and enchance their technical report writing and presentation	2018-2019

118ENT01	TECHNICAL ENGLISH	L	T	P	C
		2	0	0	2

OBJECTIVES:

The Course prepares first semester Engineering and Technology students to:

- Develop strategies and skills to enhance their ability to read and comprehend engineeringand technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks intheir areas of specialization.

UNIT I ***09***

Listening - Ink talks and gap exercises - **Speaking** – Asking for and giving directions - **Reading** – short technical texts from journals and newspapers - **Writing** - definitions – instructions – checklists – recommendations - **Vocabulary Development** - technical vocabulary - **Language Development** – parts of speech – articles – word formation.

UNIT II ***09***

Listening - longer technical talks - **Speaking** – process description - **Reading** – longer technical texts – **Writing** – graphical representation - **Vocabulary Development** - vocabulary used in formal letters/emails and reports - **Language Development** – tenses - voices - numerical adjectives – question tags.

UNIT III ***09***

Listening - listening to classroom lectures - **Speaking** – introduction to technical presentations - **Reading** – longer texts both general and technical and practice in speed reading – **Writing** – process description using sequence words and sentences - **Vocabulary Development** - Misspelled words – one-word substitution - **Language Development** - embedded sentences – singular and plural nouns compound nouns - editing

UNIT IV ***09***

Listening - Listening to documentaries and making notes - Speaking – mechanics of presentations - Reading – reading comprehension – **Writing** - email etiquettes - job application – cover letter – Résumé preparation - essay writing - **Vocabulary Development** – synonyms and antonyms – paraphrasing - **Language Development** – modals – conditionals.

UNIT V ***09***

Listening - TED talks - **Speaking** – brainstorming and debate – **Reading** – reading and understanding technical articles – **Writing** – reports - minutes of a meeting - **Vocabulary Development**- verbal analogies - phrasal verbs - **Language Development** - concord - reported speech.

TOTAL : 45 hr.

COURSE OUTCOMES:

At the end of the course learners will be able to:

CO1: Read technical texts and write area- specific texts effortlessly.
CO2: Listen and comprehend lectures and talks in their area of specialization successfully.
CO3: Speak appropriately and effectively in varied formal and informal contexts.
CO4: Understand the basic grammatical structures and its applications.
CO5: Write reports and winning job applications.

TEXT BOOKS:

1. Board of editors. **Fluency in English A Course book for Engineering and Technology**. Orient Blackswan, Hyderabad: 2016.
2. Sudharshana. N. P and Saveetha. C. **English for Technical Communication**. CambridgeUniversity Press: New Delhi, 2016.
3. Uttham Kumar. N. **Technical English I** (with work book). Sahana Publications, Coimbatore, 2016.

118MAT02	ENGINEERING MATHEMATICS-I	L	T	P	C
		3	0	0	3

Course Objectives

- To understand the eigen value problems.
- To solve differential equations of certain types, including systems of differentialequations that they might encounter in the same or higher semesters.
- To understand the concepts of curvatures, evolutes and envelopes and to study themaxima and minima of any function.
- To learn the partial derivatives and apply the same to find maxima and minima.
- To solve certain linear differential equations using the Laplace transform techniquewhich has applications in control theory and circuit theory.

UNIT I ***MATRICES*** ***9***

Eigenvalues and eigenvectors of a real symmetric matrix –Properties – Cayley - Hamilton theorem (Statement only) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic form –Reduction of quadratic form to canonical form by orthogonal transformation.

UNIT II ***DIFFERENTIAL CALCULUS*** ***9***

Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes – Evolutes as envelope of normals.

UNIT III ***FUNCTIONS OF SEVERAL VARIABLES*** ***9***

Partial derivatives – Euler's theorem for homogenous functions – Total derivatives – Jacobians – Taylor's expansion– Maxima and Minima – Method of Lagrangian multipliers.

UNIT IV ***ORDINARY DIFFERENTIAL EQUATIONS*** ***9***

Higher order linear differential equations with constant coefficients – Method of variation of parameters – Cauchy's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients-Applications to Engineering problems-Electric Circuits, Simple Harmonic Motions and bending of beams.

UNIT V ***LAPLACE TRANSFORM*** ***9***

Laplace transforms – Conditions for existence –Basic properties (without proof) – Laplace Transform of elementary functions, derivatives and integrals, unit step function and impulse functions, periodic functions. Definition of Inverse Laplace transform – Convolution theorem (Statement and applications only) – Initial and final value theorems (Statement and applications only) – Solution of linear ordinary differential equations of second order with constant coefficients using Laplace transform techniques.

TOTAL: 45hr.

Course Outcomes

After completing this course, the student will be able to

CO1: Develop the knowledge of basic linear algebraic concepts.
CO2: Determine the solutions of ordinary differential equations by various methods whichhave an application in their core subjects.
CO3: Acquire the basic knowledge of ordinary differential calculus.
CO4: Compute maxima and minima of a function.
CO5: Apply Laplace transform techniques to solve ordinary differential equations which havean application in many engineering fields.

118PHT03	ENGINEERING PHYSICS	L	T	P	C
		2	0	0	2

Course objectives:

1. To understand the concept of properties of matter.
2. To understand the properties of sound and principles of quantization of energy.
3. To understand the properties of coherent light and its importance.

UNIT-I PROPERTIES OF MATTER 9

Elasticity – Stress – Strain diagram – Factors affecting elasticity – Twisting couple on a wire – Torsion pendulum – Young's modulus - cantilever – Uniform and Non uniform bending (theory and experiment)–Viscosity-Poiseuille's method for Coefficient of Viscosity (Qualitative).

UNIT-II ACOUSTICS AND ULTRASONICS 9

Classification of sound, loudness, intensity – Decibel – Weber Fechner Law – Reverberation and Reverberation time – derivation of Sabine's formula for Reverberation time (Growth and Decay)– Absorption coefficient and its determination.

Introduction of Ultrasonics – Production – magnetostriction effect – magnetostriction generator– piezoelectric effect – piezoelectric generator – Detection of ultrasonic waves, properties – Cavitation – Applications – Depth of sea – Non Destructive Testing.

UNIT-III QUANTUM PHYSICS 9

Black body radiation – Planck's theory (derivation) – Deduction of Wien's displacement law and Rayleigh–jeans' Law from Planck's theory – Compton Effect–derivation– Matter waves – Schrödinger's wave equation – Time independent and time dependent equations – Physical significance of wave function – Particle in a one dimensional box – Degeneracy and Non- degeneracy.

UNIT-IV LASER 9

Introduction – Principle of Spontaneous emission and stimulated emission – Population inversion – pumping – Einstein's A and B coefficients – derivation – Types of lasers – He-Ne, CO_2, Nd-YAG, Semiconductor lasers – homojunction – Applications of Laser.

UNIT-V WAVE OPTICS & FIBRE OPTICS 9

Interference – Air wedge (theory & experiment) – Polarization– Methods of polarizing light- Theory of plane circularly and elliptically polarized light.

Principle and propagation of light in optical fibers – Numerical aperture and Acceptance angle– Types of optical fibers (material, refractive index, and mode) – Fiber optical communication system (Block diagram) – Fiber optic sensors – Temperature & Displacement sensors (Qualitative).

Total Hours 45

Course Outcomes:

At the end of the course, the student will be able to

CO1: To understand properties of solids with different types of moduli and to gain knowledgeabout absorption coefficients of solids and different surfaces.

CO2: To understand basic concepts of high frequency sound waves and its applications.
CO3: To understand basic concepts of quantum mechanical behavior of wave and particlealong with applications.
CO4: To understand the concepts of production of laser and its behavior with diffractionprinciple of interference.
CO5: To apply the concept of polarization phenomenon and thereby its applications in fiberoptic communication.

118CYT04	ENGINEERING CHEMISTRY	L	T	P	C
		2	0	0	2

OBJECTIVES:

1. To make the students conversant with boiler feed water requirements, related problems and water treatment techniques.
2. To recall the terminologies of electrochemistry and explain the function of batteries andfuel cells with its electrochemical reactions.
3. To understand the fundamentals of corrosion, its types and polymers with its applications.
4. Types of fuels, calorific value calculations, manufacture of solid, liquid and gaseous fuels.

UNIT I WATER AND ITS TREATMENT *9*

Hardness of water - types - expression of hardness - units - estimation of hardness of water byEDTA - numerical problems - boiler troubles (scale and sludge) - treatment of boiler feed water - Internal treatment (carbonate, colloidal, phosphate and calgon conditioning) external treatmentIon exchange process, zeolite process - desalination of brackish water - Reverse Osmosis.

UNIT II ELECTROCHEMISTRY AND ENERGY STORAGE DEVICES *9*

Electrochemical cell-single electrode potential-standard electrode potential-electrochemical series and its significance-EMF of a cell- Nernst equation -Electrodes-Reference electrodes-hydrogen, calomel, quinhydrone and glass electrodes. Determination of pH of a solution using a glass electrode. Batteries - primary and secondary cells, dry cell, alkaline, lead acid storage cell, Ni-Cd battery and lithium nano battery. Clean energy fuel cells - H2-O2 fuel cell.

UNIT III CORROSION SCIENCE *9*

Corrosion: definition - types of corrosion: chemical and electrochemical corrosion – Pilling Bedworth ratio - types of oxide layer (stable, unstable, volatile, porous) - hydrogen evolution and oxygen absorption mechanism for electrochemical corrosion - mechanism for rusting of iron. Types of electrochemical corrosion: Galvanic corrosion - differential aeration corrosion (pitting, waterline and pipeline). Galvanic series - applications. Factors influencing corrosion: nature of metal and environment. Corrosion control methods: sacrificial anode method - impressed current Cathodic protection method - electroplating - electroless plating.

UNIT IV POLYMERS AND ITS PROCESSING *9*

Advantages of polymers over metals. Monomers - polymers - polymerization - functionality – degree of polymerization - classification of polymers based on source and applications - Molecular weight determination. Types of polymerization: addition, condensation and copolymerization - mechanism of free radical polymerization. Preparation, properties and applications of thermosetting (epoxy resin and Bakelite) and thermoplastics (polyvinyl chloride and polytetrafluoroethylene). Compounding of plastics - injection and extrusion moulding methods.

UNIT V FUELS AND COMBUSTION 9

Fuels: Introduction - classification of fuels - coal - analysis of coal (proximate and ultimate) - carbonization - manufacture of metallurgical coke (Otto Hoffmann method) - petroleum - manufacture of synthetic petrol (Bergius process) - knocking - octane number - diesel oil - cetane number - natural gas - compressed natural gas (CNG) - liquefied petroleum gases (LPG) - power alcohol and biodiesel. Combustion of fuels: Introduction - calorific value - higher and lower calorific values- theoretical calculation of calorific value - ignition temperature - spontaneous ignition temperature - explosive range - flue gas analysis (ORSAT Method).

TOTAL: 45 PERIODS

OUTCOMES:

CO1: Attribute the internal and external treatment methods for the removal of hardness in water for domestic and industrial applications.
CO2: Construct an electrochemical cell and Identify the components and processes in batteriesand infer the selection criteria for commercial battery systems with respect to different applications.
CO3: Utilize electrochemical data to formulate an electrochemical half-cell and cell reactions for corrosion control processes.
CO4: Differentiate the polymers used in day to day life based on its source, properties and applications.
CO5: Analyse the three types of fuels based on calorific value for selected application.

118EGT05	ENGINEERING GRAPHICS (Common to all Non-Circuit Branches	L 2	T 0	P 4	C 3

OBJECTIVES:

1. To understand the graphical skills for drawing the object and the principle of free-hand sketchingtechniques.
2. To understand the principle of orthographic projection of points, lines and plane surfaces.
3. To study the principle of simple solids.
4. To understand the principle of section and development of solids.
5. To understand the principle of Isometric and Perspective projections.

Concepts and conventions (Not for Examination) **03**

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions andspecifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

UNIT I PLANE CURVES AND FREE HAND SKETCHING **15**

Curves used in engineering practices:

Conics – Construction of ellipse, Parabola and hyperbola by Eccentricity method – Construction of cycloid

– Construction of involutes of square and circle – Drawing of tangents and normal to the above curves. **Free hand sketching:**

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACES **15**

Projection of points and straight lines located in the first quadrant – Determination of true lengths andtrue inclinations – Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT III PROJECTION OF SOLIDS **15**

Projection of simple solids like prisms, pyramids, cylinders and cones when the axis is inclined to onereference plane by change of position method.

UNIT IV SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES **15**

Sectioning of simple solids like prisms, pyramids, cylinders and cones in simple vertical position by cutting planes inclined to one reference plane and perpendicular to the other – Obtaining true shape of section.Development of lateral surfaces of simple and truncated solids – Prisms, pyramids, cylinders and cones – Development of lateral surfaces of solids with cylindrical cutouts, perpendicular to the axis.

UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS **12**

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncatedprisms, pyramids, cylinders and cones Perspective projection of prisms, pyramids and cylinders by visual ray method.

TOTAL:75 Hours

COURSE OUTCOMES:

The student will be able to

CO1: Recognize the conventions and apply dimensioning concepts while drafting simple objects.

CO2: Draw the orthographic projection of points, line, and plane surfaces.

CO3: Draw the orthographic projection of simple solids.

CO4: Draw the section of solid drawings and development of surfaces of the given objects.

CO5: Apply the concepts of isometric and perspective projection in engineering practice.

118ESE03	BASIC MECHANICAL, ELECTRICAL, ANDELECTRONICS ENGINEERING	L	T	P	C
		3	0	0	3

Objectives:

1. The students should familiar with foundry and welding processes.
2. The students should familiar with working principle of IC engines and to gain the knowledge about various energy resources, refrigeration and air conditioning systems.
3. To learn the basics of electrical elements.
4. To introduce the fundamental concepts of DC and AC circuits.
5. To interpret the principle and characteristics of semiconductor devices.

PART-A (MECHANICAL)

UNIT – I INTRODUCTION TO FOUNDRY AND WELDING *8*

Foundry: Introduction - Patterns –materials. Types of pattern and pattern allowances. Molding sand, types and properties, Molding procedure. Welding: Definition and Classification, Gas welding, Oxy Acetylene welding, Types of flames, advantages and disadvantages of gas welding. Resistance welding - Classification, Spot welding and Seam welding. Soldering - Definition and Classification. Brazing – Definition and Classification.

UNIT - II I C ENGINES, SOURCE OF ENERGY & REFRIGERATION *10*

Internal combustion engines, Working principle of Petrol and Diesel Engines, Four stroke and Two stroke cycles, Comparison of four stroke and two stroke engines.
Sources of energy: Introduction, conventional and non-conventional sources of energy, examples, solar energy. Introduction to refrigeration and air-conditioning, COP, properties of refrigerants and types of refrigerants, working principle of vapour compression & vapour absorption refrigeration system, Layout of typical domestic refrigerator, Window and Split type room Air conditioner.

PART-B (ELECTRICAL AND ELECTRONICS)

UNIT – III INTRODUCTION TO BASIC ELECTRICAL ELEMENTS 9

Electrical circuit : passive elements - Resistor, Inductor and Capacitor; active elements-Current, Voltage, Power and Energy – Ohm's Law and limitations - Kirchhoff's Laws – relationship between current, voltage and power – Resistors in series, parallel and series - parallel circuits.

UNIT - IV FUNDAMENTALS OF DC AND AC CIRCUITS *9*

DC Circuits: Sources of Electrical Energy - Independent and Dependent Source, Source Conversion - Star –Delta conversion- Mesh and Nodal Analysis.
AC Circuits: Generation of sinusoidal - voltage, average - RMS value, form factor and peak factor-Phasor diagrams of R, L, C, combination of R-L, R-C and R-L-C circuits

UNIT – V SEMICONDUCTOR DEVICES AND SWITCHING THEORY ***9***

Semiconductor Devices - Overview of Semiconductors - basic principle, operation and characteristics of PN diode, zener diode, BJT, JFET -Number systems – binary codes - logic gates

- Boolean algebra, laws & theorems - simplification of Boolean expression - implementation ofBoolean expressions using logic gates

TOTAL : 45 Hrs.

Course Outcomes:

Upon Completion of this course, students will be able to:

CO1: Learn the concept of manufacturing methods encountered in engineering practice such asfoundry and welding processes.

CO2: Know the working of internal combustion engines and the concept of sources of energy,working principle of refrigeration and air conditioning.

CO3: Recognize the different combinations of circuit elements and solving the circuit byapplying basic circuital laws.

CO4: Acquire a good understanding of DC and AC circuits.

CO5: Demonstrate the characteristics of semiconductor devices.

118CYP07 **ENGINEERING CHEMISTRY LABORATORY**
(Common to all Non-Circuit Branches)

L	T	P	C
0	0	2	1

Objectives:

Students will be conversant with the estimation of various compounds using volumetric and instrumental analysis.

LIST OF EXPERIMENTS

1. Estimation of Total hardness by EDTA
2. Determination of percentage of calcium in Lime Stone by EDTA
3. Estimation of chloride in water sample
4. Estimation of alkalinity of Water sample
5. Determination of DO in Water (Winkler's Method)
6. Determination of Rate of Corrosion of the given steel specimen by weight loss method (Without inhibitor)
7. Determination of Rate of Corrosion of the given steel specimen by weight loss method (With inhibitor)
8. Conduct metric titration (Simple acid base)
9. Conduct metric titration (Mixture of weak and strong acids)
10. Conduct metric titration using BaCl2vs Na2 SO4
11. Potentiometric Titration (Fe^{2+} / KMnO4 or K2Cr2O7)
12. PH titration (acid & base)
13. Determination of water of crystallization of a crystalline salt -Copper sulphate
14. Preparation of Bio-Diesel by Trans etherification method.

A minimum of TEN experiments shall be offered.**Course**

Outcomes:

1. Carry out the volumetric experiments and improve the analytical skills.
2. Understand the maintenance and usage of analytical instruments and thereby developtheir skills in the field of engineering.
3. Understand the principle and handling of electrochemical instruments and Spectrophotometer.
4. Apply their knowledge for protection of different metals from corrosion by using different inhibitors

Reference(s):

1. Arthur I. Vogel's, "Quantitative Inorganic Analysis including Elementary Instrumental Analysis", ELBS, Group, 7th Edition, 2000.

118EPP08 ENGINEERING PRACTICE LABORATORY

(Common to all Non-Circuit Branches)

L	T	P	C
0	0	2	1

OBJECTIVES:

1. To get the knowledge on welding techniques and its types.
2. To do the fitting operation on a given material. (Specimen)
3. To carry out sheet metal operation.
4. To know the principle involved in plumbing work.
5. To do the carpentry work on a given work piece.

LIST OF EXPERIMENTSWELDING:

Study of Electric Arc welding and Gas welding tools and equipment's.

Preparation of Arc welding and Gas welding models:

i) Butt joint ii) Lap joint iii) T - joint.

FITTING:

Study of fitting tools and operations.

Preparation of fitting models: ***i) V-fitting ii) Square fitting***

SHEET METAL WORK:

Study of sheet metal tools and operations

Preparation of sheet metal models: ***i) Rectangular Tray ii) Funnel***

PLUMBING WORKS:

Study of pipeline joints and house hold fittings.

Preparation of plumbing models: ***Basic pipe connections with PVC and GI pipe fittings.***

CARPENTRY:

Study of wooden joints and tools used in roofs, doors, windows, furniture.

Preparation of carpentry models:

i) Lap joint ii) Dovetail joint iii) T-Joint

DEMONSTRATION ON:

ELECTRICAL ENGINEERING PRACTICE

Study of Electrical components and equipments

Residential house wiring using switches, fuse, indicator, lamp and energy meter.

ELECTRONICS ENGINEERING PRACTICE

Study of Electronic components –Resistor, color coding, capacitors etc
Soldering practice –components soldering in simple electric circuit & testing continuity
COMPUTER HARDWARE AND SOFTWARE PRACTICE

Study of PC Hardware, Internet & World Wide Web and Productivity tools including Word, Excel, Power Point and Publisher.

COURSE OUTCOMES:

The students will be able to

CO1: Prepare simple Lap, Butt and T- joints using arc welding equipments.
CO2: Prepare the rectangular trays and funnels by conducting sheet metal operation.
CO3: Prepare the pipe connections and identify the various components used in plumbing.
CO4: Prepare simple wooden joints using wood working tools.
CO5: Demonstrate basic electrical, electronic and computer components based on their physical parameters and dimensions.

218ENT01 COMMUNICATIVE ENGLISH
(Common to all Branches)

L	T	P	C
2	0	2	3

OBJECTIVES:

The Course prepares first semester Engineering and Technology students:

- To help learners develop their listening skills which will enable them listen to lecturesand comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To develop the basic reading and writing skills of first year engineering and technologystudents.
- To help learners develop grammar and vocabulary of a general kind by developing theirreading skills

UNIT I **09**

Listening - conversation - Speaking – introducing oneself - exchanging personal information - Reading – comprehension - Writing - paragraph - Vocabulary Development - synonyms and antonyms - Language Development – consonants & vowels - phonetic transcription.

UNIT II **09**

Listening - telephonic conversation - Speaking – sharing information of a personal kind – greeting - taking leave - Reading – short stories – The Gift of the Magi, A Service of Love and The Last Leaf by O. Henry – Writing – developing hints - Vocabulary Development – everyday vocabulary - Language Development – British and American English - infinitive and gerund.

UNIT III **09**

Listening – class memory quiz - Speaking – impromptu - Reading – magazines – Writing – agenda - proposals - Vocabulary Development - important words used in speaking and writing - Language Development – types of sentences - information and emphasis.

UNIT IV **09**

Listening – interviews of famous persons - Speaking – story narration - Reading – case study – Writing – invitation letter - quotation letter - Vocabulary Development – listening and reading vocabulary - Language Development – cause and effect – purpose and function.

UNIT V **09**

Listening - a scene from a film - Speaking - role play - Reading – jigsaw – Writing – essay writing - Vocabulary Development- business vocabulary - Language Development - degrees of comparison – real English phrases.

TOTAL : 45 PERIODS

COURSE OUTCOMES:

At the end of the course learners will be able to:

CO1: Comprehend conversations and talks delivered in English.
CO2: Participate effectively in formal and informal conversations; introduce themselves andtheir friends and express opinions in English.
CO3: Read short stories, magazines, novels and other printed texts of a general kind.
CO4: Write short paragraphs, essays, letters and develop hints in English.

TEXT BOOKS:

1. Board of Editors. Using English A Coursebook for Undergarduate Engineers and Technologists. Orient BlackSwan Limited, Hyderabad: 2015.

218MAT02 ENGINEERING MATHEMATICS-II
(Common to all Branches)

L	T	P	C
3	0	0	3

Course Objectives

- To understand double and triple integration concepts and apply to study vector calculus comprising of surface and volume integrals along with the classical theorems involving them.
- To learn analytic functions and their properties and also conformal mappings with few standard examples those have direct applications.
- To grasp the basics of complex integration and application to contour integration which is important for evaluation of certain integrals encountered in engineering problems.
- To introduce the concept of improper integrals through Beta and Gamma functions.

UNIT-I INTEGRAL CALCULUS **9+3**

Definite and indefinite integrals - Substitution rule – Techniques of integration –Integration by parts – Trigonometric integrals - Trigonometric substitutions - Integration of rational functions by partial fractions – Integration irrational functions.

UNIT-II MULTIPLE INTEGRALS **9+3**

Double integration – Cartesian and polar co-ordinates – Change of order of integration – Change of variables between Cartesian and polar coordinates –Triple integration in Cartesian co-ordinates

– Area as double integral – Volume as triple integral.

UNIT-III VECTOR CALCULUS **9+3**

Gradient Divergence and Curl – Directional derivative – Irrotational and solenoidal, vector fields – Vector integration – Green's theorem in a plane, Gauss divergence theorem and Stokes' theorem (Statement and applications only) – Simple applications involving cubes and rectangular parallelopipeds.

UNIT-IV ANALYTIC FUNCTIONS **9+3**

Functions of a complex variable – Analytic functions – Necessary conditions, Cauchy–Riemann equation and Sufficient conditions (Statement and applications only) – Harmonic and orthogonal properties of analytic function (Statement and applications only) – Harmonic conjugate – Construction of analytic functions – Conformal mapping: w= z+c, cz, 1/z, and bilinear transformation.

UNIT-V COMPLEX INTEGRATION **9+3**

Complex integration – Statement and applications of Cauchy's integral theorem and Cauchy's integral formula – Taylor and Laurent expansions – Singular points –Residues – Residue theorem

– Application of residue theorem to evaluate real integrals – Unit circle and semi-circular contour (excluding poles on boundaries).

TOTAL: 45+15 = 60 PERIODS

Course Outcomes

At the end of the course the student will be able to

CO1: Determine the area and volume in 2-dimension and 3-dimension respectively usingmultiple integrals and also extending the concept to vector fields.
CO2: Learn the basic concepts of analytic functions and transformations of complex functions.
CO3: Master the integration in complex domain.
CO4: Understand the use of improper integrals' applications in the core subject.TEXT BOOK

218GET03 ENVIRONMENTAL SCIENCE AND ENGINEERING (Common to all Branches)	L	T	P	C
	2	0	0	2

OBJECTIVES:

- To study the nature and facts about environment.
- To finding and implementing scientific, technological, economic and political solutions toenvironmental problems.
- To study the interrelationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world;envision the surrounding environment, its functions and its value.
- To study the dynamic processes and understand the features of the earth's interior andsurface.

UNIT I NATURAL RESOURCES 14

Definition, scope and importance of environment – need for public awareness - Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles. Field study of local area to document environmental assets – river / forest / grassland / hill / mountain.

UNIT II ECOSYSTEMSANDBIODIVERSITY 8

Concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers –energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India –conservation of biodiversity: In-situ and ex-situ conservation of biodiversity. Field study of common plants, insects, birds; Field study of simple ecosystems – pond, river, hill slopes.

UNIT III ENVIRONMENTAL POLLUTION **10**

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – solid waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods,

earthquake, cyclone and landslides. Field study of local polluted site – Urban / Rural / Industrial / Agricultural.

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT **7**

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of non-governmental organization environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. – wasteland reclamation – consumerism and waste products – environment production act – Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT **6**

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

TOTAL: 45 PERIODS

COURSE OUTCOMES:

CO1: Environmental Pollution or problems cannot be solved by mere laws. Public participationis an important aspect which serves the environmental Protection. One will obtain knowledge on the following after completing the course.
CO2: Public awareness of environmental is at infant stage.
CO3: Ignorance and incomplete knowledge has led to misconceptions
CO4: Development and improvement in std. of living has led to serious environmental disasters

Hosur - 635 130
Krishnagiri (Dt.), Tamil Nadu.

218EMT04 ENGINEERING MECHANICS **L T P C**
(Common to all Non-Circuit Branches) **3 0 0 3**

OBJECTIVES:

1. To understand the vectorial and scalar representation of forces and moments.
2. To understand the static equilibrium of particles and rigid bodies both in two dimensions.
3. To understand the concepts of centroids and moment of inertia of composite sections.
4. To understand the principle of work and energy.
5. To enable the students to comprehend the effect of friction on equilibrium.

UNIT I BASICS & STATICS OF PARTICLES **12**

Introduction-Units and Dimensions-Laws of mechanics - Lame's theorem, Parallelogram and Triangular law of forces, Polygon force, Resolution and Composition of forces, Equilibrium of a particle- Forces in space - Equilibrium of a particle in space-Equivalent systems of forces-Principle of transmissibility-Single equivalent force.

UNIT II EQUILIBRIUM OF RIGID BODIES **12**

Free body diagram-Types of supports and their reactions-Requirements of stable equilibrium-Moments and Couples, Moment of a force about a point and about an axis-Vectorial representation of couples- Varignon's theorem-Equilibrium of Rigid bodies in two dimensions- Equilibrium of Rigid bodies in three dimensions – Examples.

UNIT III PROPERTIES OF SURFACES AND SOLIDS **12**

Determination of Areas and Volumes-First moment of area and the centroid of sections - rectangle, circle, triangle from integration - T section, I section, Angle section, Hollow section by using standard formula, Second and product moments of plane area - Rectangle, triangle, circle from integration-T section, I section, Angle section, Hollow section by using standard formula, Parallel axis theorem and perpendicular axis theorem.

UNIT IV DYNAMICS OF PARTICLES **12**

Displacement, Velocity and Acceleration, their relationship, Relative motion- Rectilinear motion- Curvilinear motion, Newton's law-Work Energy Equation of particles-Impulse and Momentum-Impact of elastic bodies.

UNIT V FRICTION **12**

Frictional force - Laws of Coloumb friction - Simple contact friction - Rolling resistance - Belt friction
- Ladder friction - wedge friction.

TOTAL : 60 Hours

COURSE OUTCOMES:

The students will be able to

CO1: Explain the differential principle applies to solve engineering problems dealing with force, displacement, velocity and acceleration.
CO2: solution for problems related to equilibrium of particles.
CO3: Solve the Moment of inertia for different 2-D plane figures.
CO4: Analyze the forces in any structures.
CO5: Solve rigid body subjected to frictional forces.

Hosur - 635 130
Krishnagiri (Dt.), Tamil Nadu.

218PHP07 ENGINEERING PHYSICS LABORATORY **L T P C**
(Common to all Non-Circuit Branches) **0 0 2 1**

Course objectives:

- To understand the practical concepts of Interference and diffraction.
- To understand the concept of velocities of sound in different liquids.
- To get better knowledge of modulus of elasticity.
- To understand the concepts of thermal conductivity.
- To understand the concepts of viscosities of liquid

LIST OF EXPERIMENTS

1. (a) Determination of laser parameters – Wavelength.
   (b) Particle size determination using Diode Laser.
2. Determination of thickness of a thin wire-Air wedge method.
3. Determination of velocity of sound and compressibility of liquid-Ultrasonicinterferometer.
4. Determination of wavelength of mercury spectrum-Spectrometer grating.
5. Determination of thermal conductivity of a bad conductor-Lee's disc method.
6. Determination of Young's modulus of the material –Non uniform bending.
7. Determination of viscosity of liquid – Poiseuille's method.
8. Spectrometer- Dispersive power of prism.
9. Determination of Young's modulus of the material - Uniform bending.
10. Tensional pendulum- Determination of Rigidity modulus.

Course Outcomes: At the end of the course, the student will be able to

CO1: Understanding the moduli of elasticity by determining Young's modulus and Rigiditymodulus of a beam and cylinder respectively.

CO2: Understanding the phenomenon of diffraction, dispersion and interference of light usingoptical component

CO3: Acquiring knowledge of viscosity by determining coefficient of viscosity of a liquid andmeasuring the parameters of ultrasound propagating through a liquid

CO4: Understanding the phenomenon of heat transfer through conductors and bad conductors by determining thermal conductivity.

218PPT05 PROBLEM SOLVING AND PYTHON PROGRAMMING
(Common to all Non-Circuit Branches)

L	T	P	C
3	0	0	3

OBJECTIVE(S):

1. To know the basics of algorithmic problem solving
2. To read and write simple Python programs.
3. To develop Python programs with conditionals and loops.
4. To define Python functions and call them.
5. To use Python data structures --- lists, tuples, dictionaries.
6. To do input/output with files in Python.

UNIT I ALGORITHMIC PROBLEM SOLVING 9

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

UNIT II DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT III CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNIT IV LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

UNIT V FILES, MODULES, PACKAGES 9

Files and exception: text files, reading and writing files, format operator; command line arguments, date and time, errors and exceptions, handling exceptions, debugging, modules, packages; Illustrative programs: word count, copy file.

COURSE OUTCOMES:

Upon completion of the course, students will be able to

CO1: Develop algorithmic solutions to simple computational problems

CO2: Read, write, execute by hand simple Python programs.
CO3: Structure simple Python programs for solving problems.
CO4: Decompose a Python program into functions.
CO5: Represent compound data using Python lists, tuples, dictionaries.
CO6: Read and write data from/to files in Python Programs.

218PPP08 PROBLEM SOLVING AND PYTHON PROGRAMMING LABORATORY

(Common to all Non-Circuit Branches)

L	T	P	C
0	0	2	1

COURSE OBJECTIVES:

1. To write, test, and debug simple Python programs.
2. To implement Python programs with conditionals and loops.
3. Use functions for structuring Python programs.
4. Represent compound data using Python lists, tuples, dictionaries.
5. Read and write data from/to files in Python.

LIST OF PROGRAMS:

1. To Implement python scripts using Variables and operators
2. To Demonstrate Operator precedence to evaluate an expression
3. Display grade of a student using elif statement
4. Implement Floyd triangle using for loop
5. Checks the given number is prime or not using while loop
6. Compute the GCD of Numbers using functions
7. Finding factorial of a given number using recursive function.
8. Takes a list of words and returns the length of longest one using strings
9. To perform linear and binary search using strings
10. To implement list as arrays (multiply 2 matrices)
11. To demonstrate use of list & related functions
12. To demonstrate use of tuple, set& related functions
13. To demonstrate use of Dictionary& related functions
14. Finding most frequent words in a text read from a file
15. Programs that take command line arguments (word count)

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux

TOTAL: 45 Hrs.

COURSE OUTCOMES:

Upon completion of the course, students will be able to:

CO1: Write, test, and debug simple Python programs.

CO2: Implement Python programs with conditionals and loops.

CO3: Develop Python programs step-wise by defining functions and calling them.
CO4: Use Python lists, tuples, dictionaries for representing compound data.
CO5: Read and write data from/to files in Python.

		L	T	P	C
318MAT01	ENGINEERING MATHEMATICS-III	3	1	0	4

OBJECTIVES

- To learn various methods to solve the partial differential equations.
- To introduce Fourier series analysis which plays a vital role in many applications in engineering.
- To understand the boundary value problems and to obtain the solution using partial differential equations.
- To acquaint the student with Fourier transform techniques used in wide variety of situations.
- To develop z-transform techniques which analyze the discrete time signals.

UNIT 1 PARTIAL DIFFERENTIAL EQUATIONS 12

Solutions of first order partial differential equations-Standard types-Singular solutions-Lagrange's Linear equation- Solution of homogeneous and non-homogenous linear equations of second and higher order with constant coefficients.

UNIT 2 FOURIER SERIES 12

Dirichlet's conditions – General Fourier series – Change of scale - Odd and even functions – Half-range Sine and Cosine series – Parseval's identity – Harmonic Analysis.

UNIT 3 BOUNDARY VALUE PROBLEMS 12

Classification of Partial Differential Equations – Method of separation of Variables – Solutions of one dimensional wave equation and One-dimensional heat equations –Applications using Fourier series solutions in Cartesian coordinates - Steady state solution of two-dimensional heat equation.

UNIT 4 FOURIER TRANSFORM 12

Fourier integral theorem – Fourier transform pair - Sine and Cosine transforms – Properties – Fourier Transform of simple functions – Convolution theorem applications – Parseval's identity applications.

UNIT 5 Z- TRANSFORM 12

Z-Transform - Elementary properties and applications – Initial and final value theorems (Statement and applications only) - Inverse Z-Transform – Partial fractions method, Residue theorem method and Convolution theorem (statement and applications only) - Solution of difference equations by applying Z-transforms.

COURSE OUTCOMES:After undergoing the course, the students will have ability to

Co .1: Knowing the methods to solve partial differential equations occurring in various physical and engineering problems.
Co .2: Describing an oscillating function which appear in a variety of physical problems by Fourier series helps them to understand its basic nature deeply.
Co .3: Acquiring the knowledge to construct partial differential equations with initial and boundary conditions for various physical and engineering real time problems and obtaining solution using Fourier series methods.
Co .4: Understanding the effect of Fourier transform techniques and their applications.
Co .5: Gaining the concept of analysis of linear discrete system using Z-transform approach.

		L	T	P	C
318CET02	**MECHANICS OF SOLIDS**	**3**	**0**	**0**	**3**

OBJECTIVES

- To learn the fundamental concepts of Stress, Strain and deformation of solids.
- To know the mechanism of load transfer in beams, the induced stress resultants and deformations.
- To determine the deflection in beams.
- To understand the effect of torsion on shafts andsprings.
- To analyze plane and spacetrusses

UNIT-1 STRESS STRAIN AND DEFORMATION OF SOLIDS, STATES OF STRESS **12**

Rigid bodies and deformable solids – stability, strength, stiffness – tension, compression and shear stresses – strain, elasticity, Hooke's law, limit of proportionately, modulus of elasticity, stress-strain curve, lateral strain – temperature stresses – deformation of simple and compound bars – shear modulus, bulk modulus, relationship between elastic constants – stress at a point – stress on inclined plane – principal stresses and principal planes – Mohr's circle of stresses.

UNIT-2 TRANSVERSE LOADING ON BEAMS **12**

Beams – types of supports – simple and fixed, types of load – concentrated, uniformly distributed, varying distributed load, combination of above loading – relationship between bending moment and shear force – bending moment, shear force diagram for simply supported, cantilever and over hanging beams – Theory of simple bending – analysis of stresses – load carrying capacity of beams – proportioning of sections - Flitched beams

UNIT-3 DEFLECTION OF BEAMS AND SHEAR STRESSES **12**

Deflection of beams Double Integration method -Macaulay's method – slope and deflection using moment area method, Conjugate Beam method – variation of shear stress – shear stress distribution in rectangular, I sections, solid circular sections, hollow circular sections, angle and channel sections.

UNIT-4 TORSION AND SPRINGS **12**

Theory of Torsion – Stresses and Deformations in Solid and Hollow Circular Shafts – combined bending moment and torsion of shafts - Power transmitted to shaft – Shaft in series and parallel – Closed and Open Coiled helical springs – springs in series and parallel

UNIT-5 ANALYSIS OFTRUSSES **12**

Determinate and indeterminate trusses - Analysis of pin jointed plane determinate trusses by method of joints, method of sections and tension coefficient – Analysis of Space trusses by tension coefficientmethod.

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO .1: Understand the concepts of stress and strain, principal stresses and principal planes.
CO .2: Determine Shear force and bending moment in beams and understand concept of theory of simple bending.
CO .3: Calculate the deflection of beams by different methods and selection of method for determining slope and deflection.
CO .4: Apply basic equation of torsion in design of circular shafts and helical springs.
CO .5: Analyze the pin jointed plane and space trusses

		L	T	P	C
318CET03	**MECHANICS OF FLUIDS**	3	0	0	3

COURSE OBJECTIVES

- To understand the basics of fluid mechanics & fluid properties
- To understand the principles of Fluid statics and kinematics
- To gain knowledge on fluid dynamics
- To gain knowledge in Analysis of flow through pipes
- To study about the Dimension and Models

UNIT-1 DEFENITIONS AND FLUID PROPERTIES 12

Definitions – Fluid and fluid mechanics – Dimensions and units – Fluid properties – Pressure measurements – manometers – Continum Concept of System and Control Volume.

UNIT-2 FLUID STATICS 12

Pascal's Law and Hydrostatic equation – Forces on plane and curved surfaces – Buoyancy – Meta centre- Fluid mass under relative equilibrium.

UNIT-3 FLUID KINEMATICS 12

Stream, streak and path lines – Classification of flows – Continuity equation (one, two and three dimensional forms) – Stream and potential functions – flow nets-Velocity Measurements-Pitot tube.

UNIT-4 FLUID DYNAMICS 12

Euler and Bernoulli's equations – Application of Bernoulli's equation – Discharge measurement – Laminar flows through pipes and between plates – Hagen Poiseuille equation – Turbulent flow – Darcy-Weisbach formula – Major and minor losses of flow in pipes – Pipes in series and in parallel

UNIT-5 SIMILITUDE AND MODEL STUDY 12

Dimensional Analysis – Rayleigh's method, Buckingham's Pi-theorem – Similitude and models – Scale effect and distorted models.

COURSE OUTCOMES:After undergoing the course, the students will have ability to

Co 1: Gain knowledge on fluid properties

Co 2: Know about Fluid statics and kinematics

Co 3: Gain knowledge on Fluid dynamics

Co 4: Understand and solve the problems related to flow through pipes

Co 5: Gain knowledge about Dimensional analysis and preparation of models in hydraulic structures

318CET04	CONSTRUCTION MATERIALS & LSTRUCTURAL GEOLOGY	L T P C 3 0 0 3

OBJECTIVES

- To impart knowledge on civil engineering materials and their properties.
- To study about timber and other building materials
- To impart knowledge on modern materials.
- To impart knowledge on foundation and form work.
- To impart knowledge on super structure.

UNIT-1 BUILDING MATERIALS 9

Stone as building material-Criteria for selection-Test on stones-Deterioration and preservation of stone works-Bricks-Manufacture of clay bricks-Test on bricks-Compressive strength- Water absorbtion-Efflorescence-Brick for special use- Refractory bricks-Cement and concrete hollow bricks-Lightweight concrete bricks-Lime-Preparation of lime mortar-Cement ingredients-Manufacturing process-Types of cement-Properties of cement and cement mortar + Concrete properties-Compressive strength-Tensile strength-Fly ash bricks-aggregate- Codal provisions.

UNIT-2 TIMBER AND OTHER MATERIALS 9

Timber -Market forms-Industrial timber-Plywood- Veneer- Thermo Cole- Panels of laminates-Steel-Aluminium and other metallic materials-Composition-uses-Market forms-Mechanical treatment- Paints- Varnishes-Distempers-Termite proofing- Codal provisions.

UNIT-3 MODERN MATERIALS 9

Glass-Ceramics-Sealants for joints-Fibre glass reinforced plastic-Clay products-Refractories-Composite materials-Types-Application of laminar composites-Fibre textiles-Geosynthetics for civil engineering application

UNIT-4 FOUNDATION AND STRUCTURAL GEOLOGY 9

Introduction-function of foundation-Requirements of good foundation-Types of foundation-Deep foundation-Shallow foundation-Materials for frame work-Timber work-Plywood formwork-Order and method of removing formwork.

Attitude of beds – Outcrops –Geological maps – study of structures – Folds, faults, joints and Lineaments– Dip, Declination - Their bearing on engineering construction

UNIT-5 SUPERSTRUCTURE CONSTRUCTION 9

Masonry-Bricks-Stone-Types-Uses-Column-Beam-Lintels-Sunshade-Flooring-Plastering-R.C.C slab-One way and two way- Pitched roof and simple trusses-Construction joints-Expansion joints-Scaffoldings-arches-Doors & windows.

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

Co 1: To know the properties of materials
Co 2: To understand the application of Timber and other building materials
Co 3: To know the conventional and modern construction
C0 4: To know the sub structure & frame work
Co 5: To know the super structure

		L	T	P	C
318CET05	ENGINEERINGSURVEY	3	0	0	3

OBJECTIVES

- To possess the knowledge on Classification of Surveying
- To impart knowledge on the concepts of sueveying
- To impart knowledge on applications of levelling in Engineering field.
- To impart knowledge on uses of theodolite
- To impart knowledge on setting out of curves

UNIT-1 FUNDAMENTALS OF CONVENTIONAL SURVEYINGANDLEVELLING **9**

Classifications and basic principles of surveying - Equipment and accessories for ranging and chaining - Methods of ranging - Compass - Types of Compass - Basic Principles-Bearing – Types-TrueBearing-MagneticBearing- Levelling-PrinciplesandtheoryofLevelling– Datum- Bench Marks – Temporary and Permanent Adjustments- Methods of Levelling- Booking – Reduction - Sources of errors in Levelling - Curvature andrefraction

UNIT-2 THEODOLITE ANDTACHEOMETRICSURVEYING **9**

Horizontal and vertical angle measurements - Temporary and permanent adjustments - Heights and distances - Tacheometer - Stadia Constants - Analytic Lens -Tangential and Stadia Tacheometry surveying - Contour – Contouring – Characteristics of contours – Methods of contouring – Tacheometric contouring - Contour gradient – Uses of contour plan and map

UNIT-3 CONTROL SURVEYINGANDADJUSTMENT **9**

Horizontal and vertical control – Methods – specifications – triangulation- baseline satellite stations – reduction to centre- trigonometrical levelling single and reciprocal observations – traversing–Gale'stable.-ErrorsSources-precautionsandcorrections– classification oferrors– true and most probable values - weighed observations – method of equal shifts – principle of least squares - normal equation – correlates- level nets-adjustment of simple triangulation networks.

UNIT-4 ADVANCED TOPICS INSURVEYING **9**

Hydrographic Surveying – Tides – MSL – Sounding methods – Three point problem – Strength of fix – astronomical Surveying – Field observations and determination of Azimuth by altitude and hour angle methods –.Astronomical terms and definitions - Motion of sun and stars - Celestial coordinate systems - different time systems - Nautical Almanac - Apparent altitude and corrections - Field observations and determination of time, longitude, latitude and azimuth by altitude and hour anglemethod

UNIT-5 MODERN SURVEYING **9**

Total Station : Advantages - Fundamental quantities measured - Parts and accessories - working principle - On board calculations - Field procedure - Errors and Good practices in using Total Station GPS Surveying : Different segments - space, control and user

segments - satellite configuration - signal structure - Orbit determination and representation - Anti Spoofing and Selective Availability - Task of control segment - Hand Held and Geodetic receivers - data processing - Traversing and triangulation.

COURSE OUTCOMES:After undergoing the course, the students will have ability to

Co 1 The use of various surveying instruments andmapping
Co 2 Measuring Horizontal angle and vertical angle using differentinstruments
Co 3 Methods of Leveling and setting Levels with differentinstruments
Co 4 Concepts of astronomical surveying and methods to determine time, longitude, latitude and azimuth
Co 5 Concept and principle of modernsurveying

		L	T	P	C
318CET06	VALUE EDUCATION PROGRAM	3	0	0	3

OBJECTIVES

- Teach definition and classification of values.
- Explain Purusartha.
- Describe Sarvodaya idea.
- Summarize sustenance of life.
- Conclude views of hierarchy of values.

UNIT-1 DEFINITION AND CLASSIFICATION OF VALUES 12

DefInition-values-types of values – changing concepts of values values through various generous of literature

UNIT-2 INDIVIDUAL AND GROUP BEHAVIOUR 12

Personal values, self strength (self confidence), self assesments – self reliance, self discipline – self determination – self restrainment – humidity – sympathy- compassion- attitude and forgiveness

UNIT-3 SOCIETIES IN PROGRAM

Defenition – communities – ancient and model agents – sense of survival – security – desire for comfort – sense of belongings – social consequences and responsibility

UNIT-4 SUSTENANCE OF LIFE

The Problem of Sustenance of value in the process of Social, Political and Technological Changes

UNIT-5 ENGINEERING ETHICS

Society of Engineers – care of ethics – Ethical issues – ethical and inethical practice – case studies – situational decision

COURSE OUTCOMES:After undergoing the course, the students will have ability to

Co 1: Able to understand definition and classification of values.
Co 2: Able to understand purusartha
Co 3: Able to understand sarvodaya idea.
Co 4: Able to understand sustenance of life.
Co 5: COAble to understand views of hierarchy of values.

		L	T	P	C
318CEP07	ENGINEERING SURVEYING LABORATORY	0	0	3	2

OBJECTIVES

- To impart knowledge on Chain & its classification.
- To impart knowledge on Levelling
- To impart knowledge on making contours in plains & hilly area
- To impart knowledge on Theodolite Surveying
- To impart knowledge in astronomical surveying

LIST OF EXPERIMENTS

Chain Survey

1. Study of chains and its accessories, Aligning, Ranging, Chaining and Marking Perpendicular offset
2. Setting out works – Foundation marking using tapes single Room and DoubleRoom

Compass Survey

3. Compass Traversing – Measuring Bearings & arriving includedangles

Levelling - Study of levels and levelling staff

4. Fly levelling using Dumpy level &Tiltinglevel
5. Check levelling

Theodolite - Study of Theodolite

6. Measurements of horizontal angles by reiteration and repetition and verticalangles
7. Determination of elevation of an object using single plane method when base is accessible/inaccessible.

Tacheometry – Tangential system – Stadia system

8. Determination of Tacheometric Constants
9. Heights and distances by stadiaTacheometry
10. Heights and distances by TangentialTacheometry

Total Station - Study of Total Station, Measuring Horizontal and vertical angles

11. Traverse using Total station and Area ofTraverse
12. Determination of distance and difference in elevation between two inaccessible points using Totalstation

COURSE OUTCOMES:After undergoing the course, the students will have ability to

co 1: Handle basic survey equipments like Theodolite, Total Station and GPS
Co 2: Carry out survey work covering large area
Co 3: Measure differences in elevation and distance accessible and inaccessible point
Co 4: Carry out alignment surveys and compute area / quantities
Co 5: To carryout Triangulation and Astronomical surveying including general field marking for various engineering projects and Location of siteetc.

		L	T	P	C
318CEP08	BUILDING MATERIALS & CONSTRUCTIONPRACTICES LABORATORY	0	0	3	2

COURSE OBJECTIVES

- To impart knowledge on the properties of aggregate
- To impart knowledge on the properties of cement
- To impart knowledge on the properties of bricks
- To understand the construction of brick wall

LIST OF EXPERIMENTS

I.TEST ONAGGREGATE

1Aggregate Crushing Test

2 Abrasion Test

3.Shape Test – Flakiness Index, Elongation Index, Angularity Number

4.Specific Gravity And Water Absorption Test For Coarse Aggregate

II.TEST ONCEMENT

1. Specific Gravity Test For Cement
2. Normal Consistency Test For Cement
3. Setting Time Of Cement
4. Compressive Strength Of Cement
5. Fineness Test For Cement

III.TEST ONBRICKS

1. Test for compressive strength of bricks
2. Test for Water absorption of bricks
3. Determination of Efflorescence ofbricks

IV. CONSTRUCTION OF BRICK WALL

1. Arrangement of bricks using English bond for one brick thick wall, one and a half brick thick wall for Tee junction.
2. Arrangement of bricks using Flemish bond for one brick thick wall, one and a half brick thick wall for Tee junction.

COURSE OUTCOMES:

Co 1: After undergoing the course, the students will have ability to conduct
Co 2: Test on properties of aggregates
Co 3: Test on properties of cement
Co 4: Test on bricks
Co 5: Construct brick wall with different bonds

		L	T	P	C
318CET09	BUILDING PLANNING & DRAWING	0	0	3	2

OBJECTIVES

- To draft on manual building drawings (Plan, elevation and sectional views) in accordance with development and control rules satisfying orientation and functional requirements for the following

BONDS AND BRICK MASONRY

Convertional Signs-Conventional Symbols-Brick Masonry-English Bond-Brick MasonryFlemish bond Stone Masonry-Ashlar, Fine & Rubble.

DOORS AND WINDOWS

Cavity Walls-At Head of Window Opening & Roof Level-Panelled Door-Glazed & Panelled Door-HollowCore or Framed Flushed Door-Panelled Window-Glazed Window

TRUSSES AND STAIR CASE

King Post Truss-Details of King Post Truss-Queen Post Truss-Steel Roof Truss-Lean TO Roof- Stair Case-Quarter Turn-Half Turn –Dog Legged Stairs-Half Turn (Open Well) Stairs.

BUILDING DESIGN

Foundations-Plan-Section-Elevation of Buildings-A Residential House-Two Storied Residential Building-An Office Building-A LIG & MIG House.

COURSE OUTCOMES:

After undergoing the course, the students will have ability to draft on manual building drawings (Plan, elevation and sectional views) in accordance with development and control rules satisfying orientation and functional requirements for the drawings

		L	T	P	C
418NMT01	**NUMERICAL METHODS**	**3**	**1**	**0**	**4**

OBJECTIVES

- The students would be acquainted with the basic concepts of numerical methods.
- To provide the mathematical foundations of numerical techniques for solving linear system, eigenvalue problems, interpolation, numerical differentiation and integration and the errors associated with them.
- To apply numerical techniques in engineering applications.
- To demonstrate the utility of numerical techniques of ordinary and partial differential equations in solving engineering problems where analytical solutions are not readily available.

UNIT-1 SOLUTION OF EQUATIONSAND EIGENVALUE PROBLEMS 9

Solution of algebraic and transcendental equations - Fixed point iteration method – Newton-Raphson method- Solution of linear system of equations - Gauss Elimination method - Gauss-Jordan methods – Iterative methods of Gauss-Jacobi and Gauss-Seidel - Matrix Inversion by Gauss-Jordan method - Eigenvalues of a matrix by Power method.

UNIT-2 INTERPOLATION AND APPROXIMATIO 9

Interpolation with equal intervals - Newton's forward and backward difference formulae - Interpolation with unequal intervals - Lagrange interpolation – Newton's divided difference interpolation – Cubic Splines.

UNIT-3 NUMERICAL DIFFERENTATION AND INTEGRATION 9

Approximation of derivatives using interpolation polynomials - Numerical integration using Trapezoidal, Simpson's 1/3 and Simpson's 3/8 rules – Two point and three point Gaussian quadrature formulae – Evaluation of double integrals by Trapezoidal and Simpson's rules.

UNIT-4 INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 9

Single step-methods - Taylor's series method - Euler's method - Modified Euler's method - Fourth order Runge-Kutta method for solving first order equations - Multi-step methods - Milne's and Adams-Bashforth predictor-corrector methods for solving first order equations.

UNIT-5 BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 9

Finite difference techniques for the solution of two dimensional Laplace's and Poisson's equations on rectangular domain – One dimensional heat-flow equation by explicit and implicit (Crank-Nicholson) methods - One dimensional wave equation by explicit method.

		L	T	P	C
418CET02	**STRENGTH OF MATERIALS**	**3**	**0**	**0**	**3**

OBJECTIVES

- To understand the strain energy principles and theorems with their applications
- To understand the shear force and bending moment distribution for indeterminate beams
- To impart the knowledge in calculating the capacity of column
- To provide understanding of various methods in finding deflection of beams.
- To exposure on thick cylinders and various theories of failure.

UNIT-1 ENERGY PRINCIPLES **12**

Strain energy and strain energy density – strain energy in traction shear, Flexure and torsion-Principle of virtual work-Castigliano's Theorems –application of energy theorems for computing deflections in beams– Maxwell's reciprocal theorems

UNIT-2 PROPPED CANTILEVER AND FIXED BEAMS **12**

Propped cantilever and fixed beams-fixed end moments and reactions for concentrated load (central, non central), uniformly distributed load, triangular load (maximum at centre and maximum at end) –Effect of Sinking of Supports in Fixed Beams- theorem of three moments – analysis of continuous beams – shear force and bending moment diagrams for continuous beams (maximum two degrees of indeterminacy).

UNIT-3 CONTINUOUS BEAMS **12**

Continuous beams- theorem of three moments- analysis of continuous beams-Supports not at the same level-Continuous beams with a fixed end-S.F. and B.M. diagrams for continuous Beams-Slope and deflections in Continuous Beams (Qualities study only).

UNIT-4 COLUMNS **12**

Eccentrically loaded short columns – middle third rule – core section – columns of unsymmetrical sections (angle channel sections) – Euler's theory for long columns – critical loads for prismatic columns with different end conditions; Rankine-Gordon formula for eccentrically loaded columns.

UNIT-5 THICK CYLINDERS **12**

Introduction-Lamys Theorem-Special Cases-Longitudinal and Shear stress- Design of Thick Cylinders Shells-Compound or Shrunk cylinder-Necessary difference of radii for shrinkage-Introduction to theories of failure – principal stress – principal strain – shear stress – strain energy and distortion energy theories.

4.Srinath, L.S, "Advanced mechanics and solids", Tata-McGraw Hill publishing company ltd, 2005.

5.http://www.esm.psu.edu/courses/emch213d/tutorials/animations

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

Co 1 apply energy principles in analysing structures

Co 2 analyse the indeterminate beams and their deflections which are required for designing structures

Co 3 analyse columns and to locate kern of column

Co 4 analyse thick cylinders subjected to fluid pressure

Co 5 apply theories of failure to calculate capacity of structure/system

		L	T	P	C
418CET03	**APPLIED HYDRAULIC ENGINEERING**	**3**	**0**	**0**	**3**

OBJECTIVES

- To learn the characteristics of open channel flow and its measurements
- To study the concepts of uniform and non uniform flow in open channel
- To derive most economical channel sections
- To understand the concepts of momentum principles
- To impart knowledge on working of pumps and turbines

UNIT-1 OPEN CHANNEL FLOW 9

Open channel flow – Types and regimes of flow – Velocity distribution in open channel – Specific energy – Critical flow and its computation. Stream Flow Measurements –Measurement of Stage-Measurement of Velocity – Area - Velocity Method – Numerical on above.

UNIT-2 UNIFORM FLOW 9

Uniform flow - Velocity measurement - Manning's and Chezy's formula - Determination of roughness coefficients - Determination of normal depth and velocity – Most economical sections - Non-erodible channels– Numerical on above

UNIT-3 VARIED FLOW 9

Introduction to GVF,RVF,SVF-Dynamic equations of gradually varied flow – Assumptions – Characteristics of flow profiles – Draw down and back water curves – Profile determination – Hydraulic jump – Types – Energy dissipation –Spillways – Convergent flumes – Numerical on above.

UNIT-4IMPULSE MOMENTUM PRINCIPLES & TURBINE 9

Impulse momentum principles - Impact of Jets on plane and curved plates - Turbines - Classifications of Turbines, Impulse and reaction turbines, Performance characteristics curves for Turbines - Iso efficiency curve - Numerical on above.

UNIT-5 PUMPS 9

Pumps – Classifications of Pumps - Centrifugal Pump –Components of Centrifugal Pumps – Work done on Centrifugal pumps-Characteristic curves for Centrifugal pumps - Positive displacement pumps- Reciprocating pump and its components - slip- Indicator diagram and its variation - Air vessels – Numerical on above - Introduction to Multistage pumps, Jet Pump & Submersible Pump

TEXTBOOKS:

1.**Subramanya K.**, "*Flow in Open channels*", Tata McGraw-Hill Publishing Company, 2005.

418CET04

GEOTECHNICAL ENGINEERING 3 0 0 3

OBJECTIVES

- To impart knowledge on engineering properties of soil
- To understand and appreciate subsurface flow patterns
- To characterize stress distribution in soil and acquire knowledge on shear strength parameters
- To have knowledge about testing methods of soil
- To understand slope failure mechanisms and protection measures

UNIT-1 INTRODUCTION 12

Nature of Soil - soil phase relationships - Index properties - Sieve analysis - sedimentation analysis – Atterberg limits - classification for engineering purposes - BIS Classification systems – Soil compaction - factors affecting compaction – field compaction methods and monitoring.

UNIT-2 SOIL WATER AND WATER FLOW 12

Soil water – Various forms – Influence of clay minerals – Capillary rise – Suction - Effective stress concept in soil – Total, neutral and effective stress distribution in soil - Permeability – Darcy's Law- Permeability measurement in the laboratory – quick sand condition - Seepage – Laplace Equation - Introduction to flow nets –properties and uses - Application to simple problems.

UNIT-3 STRESS DISTRIBUTION, COMPRESSIBILITY AND SETTLEMENT 12

Stress distribution in soil media – Boussinesque formula – stress due to line load and Circular and rectangular loaded area - approximate methods - Use of influence charts –Westergaard equation for point load - Components of settlement – Immediate, secondary and consolidation settlement - Terzaghi's one dimensional consolidation theory – governing differential equation - laboratory consolidation test – Field consolidation curve – NC and OC clays - problems on time and rate of consolidation.

UNIT-4 SHEAR STRENGTH 12

Shear strength of cohesive and cohesionless soils - Mohr - Coulomb failure theory – Saturated soil and unsaturated soil (basics only) - Strength parameters - Measurement of shear strength, direct shear, Triaxial compression, UCC and Vane shear tests –Types of shear tests based on drainage and their applicability - Drained and undrained behaviour of clay and sand.

UNIT-5 SLOPE STABILITY 12

Slope failure mechanisms- Modes - Infinite slopes - Finite slopes – Total and effective stress analysis - Stability analysis for purely cohesive and C-ϕ soils - Method of slices – Modified Bishop's method - Friction circle method - stability number – problems – Slope protection measures & Soil Stabilization

TEXTBOOKS:

4.**C. Venkataramaiah,** "Geotechnical Engineering", New Age International Publishers, New Delhi, 2014

5.**Murthy, V.N.S.,** "Text Book of Soil Mechanics and Foundation Engineering", CBS Publishers, 2007

COURSE OUTCOMES: After undergoing the course, the students will have ability to

Co 1: classify the various types of soil

Co 2: determine the physical and engineering properties of soil

Co 3: determine the stresses in soils with respected to given loading conditions

Co 4: quantify the shear behaviour of soil

Co 5: derive the stability of slopes

		L	T	P	C
418CET05	**Water Supply Engineering**	**3**	**0**	**0**	**3**

OBJECTIVES

- The main objectives of this course are
- To study the determination of water requirement for public supply,
- To understand the selection of sources of water,
- To study the quality standards for public supply
- To understand the concepts of treatment to make it potable for public supply & distribution.

UNIT-1 WATER USES AND DEMAND OF WATER 9

INTRODUCTION: Human activities and environmental pollution. Water for various beneficial uses and quality requirement. Need for protected water supply– WaterDemand and Types of water demands - domestic demand, institutional and commercial demand, industrial demand, public uses and fire demand etc., Per capita consumption –factors affecting per capita demand, population forecasting, different methods with merits &demerits- variations in demand of water. Fire demand – estimation by Kuichling's formula, Freeman formula & national board of fire underwriters' formula.Peak factors, design periods & factors governing the design periods.

UNIT-2 SOURCES - COLLECTION AND CONVEYANCE OF WATER 9

Surface and subsurface sources – suitability with regard to quality and quantity-Intake structures – different types of intakes; factor for selection and location of intakes. Pumps- Necessity, types of pumps; factors to be considered for the selection of a pumps. Pipes – Design of the economical diameter for the rising main; Nomo grams – use; Pipe appurtenances.

UNIT-3 QUALITY OF WATER 9

Objectives of water quality. Wholesomeness& palatability of water, water borne diseases. Water quality parameters – Physical, chemical and Biological.Sampling of water for examination. Water quality analysis using a[nalytical and instrumental techniques. Drinking water standards as per BIS & WHO guidelines.Health significance of Fluoride, Nitrates and heavy metals like Mercury, Cadmium, Arsenic and toxic / trace organics.

UNIT-4 WATER TREATMENT 9

Water treatment flow-charts. Aeration- Principles of aeration, types of Aerators - Sedimentation-Theory, Types of settling tanks, design. Sedimentation aided with Coagulation, chemical feeding, flash mixing, and clari-flocculator-Filtration-Mechanism – theory of filtration, types of filters, slow sand, rapid sand and pressure filters including construction, operation, cleaning and their design.– Back washing of filters. Operational problems in filters. Disinfection-Theory of disinfection, types of disinfection, Chlorination, chlorine demand, residual chlorine, use of bleaching powder. UV radiation treatment – treatment of swimming pool water - Softening – definition, methods of removal of hardness by lime soda process, zeolite process, RO & Membrane technique. Miscellaneous Treatment - Removal of color, odor & taste, use of copper sulfate, adsorption technique ,fluoridation and defluoridation- Removal of Iron & Manganese.

UNIT-5 DISTRIBUTION SYSTEMS **9**

System of supply- service reservoirs and their capacity determination- methods of layout of distribution systems-Maintenance of Distribution Systems-Miscellaneous-Pipe appurtenances, various valves, type of fire hydrants, pipefitting,Leak Detection&layout of water supply pipes in buildings.

COURSE OUTCOMES:After undergoing the course, the students will have ability to:

Co 1: Know about water demand, its source & collection

Co 2: Understand the Standards applied for drinking water.

Co 3: Design the appropriate water treatment plant for municipal water supply.

Co 4: Understand & design the distribution system.

		L	T	P	C
418CET06	**3D PRINTING AND DESIGN**	**3**	**0**	**0**	**2**

OBJECTIVES

- To impart knowledge and skills related to 3D printing technologies
- To know about CAD for additive manufacturing
- To know about the technique in developing a product in industry and environment
- To know about the materials in developing a product
- To know about the equipment, post processing and quality control of products
-

UNIT-1 3D PRINTING **9**

Introduction, Process, Classification, Advantages, Additive V/s Conventional Manufacturing process, Applications.

UNIT-2 CAD FOR ADDITIVE MANUFACTURING **9**

CAD Data formats, Data translation, Data loss, STL format.

UNIT-3 ADDITIVE MANUFACTURING TECHNIQIUES9

Stereo- Lithography, LOM, FDM, SLS,SLM, Binder Jet technology, Process- Process parameter- Process selection for various applications, Additive Manufacturing- Application Domains.

UNIT-4 MATERIALS **9**

Polymers- Metals, Non-metals- Ceramics, Various forms of raw material- Liquid – Solid, wire powder- Powder preparation and their desired properties, Support materials.

UNIT-5 ADDITIVE MANUFACTURING EQUIPMENT, POST PROCESSING AND PRODUCT QUALITYTOTAL HOURS **9**

Process Equipment – Design and process parameters- Governing body mechanism- Common faults and troubleshooting- Process design
Post Processing-Requirement and Techniques
Product Quality – Inspection and testing – Defects and their causes

COURSE OUTCOMES:After undergoing the course, the students will have ability to

Co 1: Develop CAD models for 3D printing
Co 2: Import and Export CAD data and generate .stl file
Co 3: Select a specific material for the given application
Co 4: Select a 3D printing process for an application
Co 5: Produce a product using or Additive Manufacturing (AM)

	L	T	P	C
418CEP06 STRENGTHOFMATERIALS LABORATORY	**0**	**0**	**3**	**2**

OBJECTIVES

- To understand the fundamental modes of application of loading on the structures toevaluate the strength.
- To impart the knowledge on measurements of loads, displacements and strains.
- To obtain the strength of the material and stiffness properties of structural elements.
- To measure hardness of material.
- To estimate impact value of material.

LIST OF EXPERIMENTS

1. Determination of Compression Test on given concrete cube specimen
2. Determination of Compression Test on given Brick specimen
3. Determination of Compression Test on given wooden specimen
4. Determination of Split Tensile Test on given concrete specimen
5. Determination of tension test on mild steel specimen
6. Determination of Modulus of Rigidity of given specimen by conducting torsion test
7. Determination of Modulus of rigidity of Helical spring
8. Determination of Flexural Rigidity of given steel beam
9. Determination of Flexural Rigidity of given wooden beam
10. Determination of Double shear strength of given specimen
11. Determination of Hardness of specimen by Brinell's Hardness Test
12. Determination of Hardness of specimen by Rock well hardness Test
13. Determination of Hardness of specimen by Vicker's hardness Test
14. Determination of Impact strength of mild steel specimen by
    i. Izod impact test
    ii. Charpy Impact test.
15. Determination of tension test on thin steel wire specimen

COURSE OUTCOMES: After undergoing the course, the students will have ability to

Co 1: access the compressive strength of concrete cubes and bricks
Co 2: analyze the flexural behavior of beams
Co 3: evaluate Young Modulus, torsional strength, hardness and tensile strength of given specimens
Co 4: find stiffness of springs
Co 5: decide over the suitability of materials for the intended purpose

418CEP07	**HYDRAULIC ENGINEERING LABORATORY**	**0**	**0**	**3**	**2**

OBJECTIVES

- To impart knowledge on measuring flow through pipes and open channels
- To familiarize the determination of major and minor losses in pipes
- To get exposed to flow tests
- To acquire knowledge on finding the efficiency of various types of pumpsTo provide knowledge on various types of turbines and their applications

LIST OF EXPERIMENTS

1. Determination of hydraulic co-efficient for orifice piece
2. Determination of hydraulic co-efficient for mouth piece
3. Determination of co-efficient of discharge for notches
4. Determination of co-efficient of discharge for venturimeter
5. Hydraulic co-efficient of V notch orifice
6. Hydraulic co-efficient of Rectangular orifice
7. Hydraulic co-efficient of Triangular orifice
8. Study of impact of jet on flat normal plate
9. Study of impact of jet on flat inclined plate
10. Study of major and minor losses in pipes
11. Study on performance characteristics of Pelton turbine.
12. Study on performance characteristics of Francis turbine
13. Study on performance characteristics of Kaplan turbine
14. Study on performance characteristics of Centrifugal pumps (Constant speed / variable speed)
15. Study on performance characteristics of reciprocating pump.

518CET01 Transportation Engineering – I **L T P C**
0 0 3 2

OBJECTIVES

- To study the concepts beyond planning and design highway.
- To acquire knowledge about methods of highway design andconstruction.
- To have knowledge on various materials and its testing methods of pavement construction.
- To understand causes of deterioration of highway and its maintenance methods.
- To estimate highway financing.

UNIT-1 HIGHWAY PLANNING AND ALIGNMENT 9

Tresaguet and Macadam's method of Road Construction, Highway Development in India - Jayakar Committee Recommendations and Realisations- Twenty-year Road Development Plans- Concepts of On-going Highway Development Programmes at National Level- Institutions for Highway Development at National level - Indian Roads Congress- Highway Research Board- National Highway Authority of India- Ministry of Road Transport and Highways (MORTH) and Central Road Research Institute- Requirements of Ideal Alignment- Factors Controlling Highway Alignment Engineering Surveys for Alignment - Conventional Methods and Modern Methods (Remote Sensing-GIS and GPS techniques)Classification and Cross Section of Urban and Rural Roads (IRC), Highway Cross Sectional Elements – Right of Way, Carriage Way-Camber, Kerbs, Shoulders and Footpaths [IRC Standards]- Cross sections of different Class of Roads.

UNIT-2 GEOMETRIC DESIGN OF HIGHWAYS 9

Design of Horizontal Alignments – Super elevation-Widening of Pavements on Horizontal Curves and Transition Curves [Derivation of Formulae and Problems]-Design of Vertical Alignments – Rolling, Limiting, Exceptional and Minimum Gradients-Summit and Valley Curves-Sight Distances - Factors affecting Sight Distances, PIEV theory, Stopping Sight Distance (SSD), Overtaking Sight Distance (OSD), Sight Distance at Intersections, Intermediate Sight Distance and Illumination Sight Distance [Derivations and Problems in SSD and OSD]-Geometric Design of Hill Roads [IRC Standards Only]

UNIT-3 DESIGN OF RIGID AND FLEXIBLE PAVEMENTS 9

Rigid and Flexible Pavements, Air field pavements -Components and their Functions-Design Principles of Flexible and Rigid Pavements-Factors affecting the Design of Pavements - ESWL, Climate, Sub-grade Soil and Traffic-Design Practice for Flexible Pavements [CBR method, IRC Method and Recommendations- Problems]-Design Practice for Rigid Pavements – [IRC Recommendations-Problems] – Joints

UNIT-4 HIGHWAY MATERIALS AND CONSTRUCTION PRACTICE 9

Desirable Properties and Testing of Highway Materials: - (Tests have to be demonstrated in Highway Engineering Laboratory)-Soil – California Bearing Ratio Test, Field Density Test Aggregate - Crushing, Abrasion, Impact Tests, Water absorption, Flakiness and Elongation indices and Stone polishing value Test-Bitumen - Penetration, Ductility, Viscosity, Binder

content and Softening Point Tests. Construction Practice - Water Bound Macadam Road, Bituminous Road and Cement Concrete Road [as per IRC and MORTH specifications]-Highway Drainage [IRC Recommendations]

UNIT-5

HIGHWAY MAINTENANCE, ECONOMICS AND FINANCE **9**

Types of defects in Flexible pavements – Surface defects, Cracks, Deformation, Disintegration – Symptoms, Causes and Treatments.-Types of Pavement, Failures in Rigid Pavements – Scaling, Shrinkage, Warping, Structural Cracks -Spalling of joints and Mud Pumping – and Special Repairs-Pavement Evaluation – Pavement Surface Conditions and Structural Evaluation, Evaluation of pavement Failure and strengthening - Overlay design by Benkelman Beam Method [Procedure only]- Highway user benefits, VOC using Charts, Economic analysis by annual cost method, benefit cost ratio method, NPV and IRR method, Principles of Highway Financing

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: Gain knowledge on highway planning and alignment
CO.2: Design various geometry with respect to highways.
CO.3: Design flexible and rigid payments
CO.4: Evaluate various highway materials and appropriate construction practices
CO.5: Acquire knowledge in financial aspects in highway project execution

518CET02 **STRUCTURAL ANALYSIS - I** **L T P C**
3 0 0 3

OBJECTIVES

- To impart knowledge about the moving loads and create influence line diagram
- To impart knowledge on the analysis of statically determinate and indeterminate structures
- To analyse arches
- To analyse structures using slope deflection method
- To analyse structures using moment distribution method

UNIT-1 DEFLECTION OF DETERMINATE STRUCTURE **12**

Energy methods – Unit load method for deflections – Deflections of pin-jointed plane frames and rigid plane frames – Willot diagram - Mohr's correction

UNIT-2 MOVING LOADS AND INFLUENCE LINES (DETERMINATE & INDETERMINATE STRUCTURES) **12**

Influence lines for reactions in statically determinate structures –Influence lines for shear force and bending moment in beam sections – Calculation of critical stress resultants due to concentrated and distributed moving loads - influence lines for member forces in pin jointed plane frames.

Muller Breslau's principle - influence line for support reactions, shearing force and bending moments for indeterminate beams - propped cantilevers, fixed beams and continuous beams

UNIT-3 ARCHES **12**

Arches - Types of arches – Eddy's analysis of three hinged, two hinged and fixed arches - Parabolic and circular arches – Settlement and temperature effects.

UNIT-4 SLOPE DEFLECTION METHOD **12**

Slope deflection equations – Equilibrium conditions - Analysis of continuous beams and rigid frames (with and without sway) – Support settlements - symmetric frames with symmetric and skew-symmetric loadings.

UNIT-5 MOMENT DISTRIBUTION METHOD **12**

Stiffness - distribution and carry over factors –- Analysis of continuous Beams- Plane rigid frames with and without sway – Support settlement - symmetric frames with symmetric and skew-symmetric loadings.

TOTAL HOURS TO BE TAUGHT **60**

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: Calculate the deflection of indeterminate beams

CO.2: Evaluate and draw influence line diagram for statically determinate and indeterminate structure.

CO.3: Calculate internal forces in arch structures.

CO.4: Apply slope deflection method to analyse statically indeterminate structures

CO.5: Apply moment distribution method to analyse statically indeterminate structures

518CET03	DESIGN OF RCC STRUCTURES	L T P C 3 0 0 3

OBJECTIVES

- To study the different types of philosophies related to Design of Reinforced Concrete Structures with emphasis on Limit State Method.
- To design Basic elements such as slab, beam
- To analyse and design the beams for shear and torsion
- To know about types of columns and design the column
- To design different types of footings

UNIT-1

METHODS OF DESIGN OF CONCRETE STRUCTURES 12

Concept of Elastic method, working stress, ultimate load method and limit state method – Advantages of Limit State Method over other methods – Design codes and specification – Limit State philosophy as detailed in IS code

UNIT-2

LIMIT STATE DESIGN FOR FLEXURE12

Analysis and design of singly and doubly reinforced rectangular and flanged beams - Analysis and design of one way and two way rectangular slab subjected to uniformly distributed load for various boundary conditions and corner effects

UNIT-3

LIMIT STATE DESIGN FOR BOND, ANCHORAGE SHEAR &TORSION 12

Design of RC members for bond and Anchorage - Design requirements as per current code - Design of RC beams for shear and torsion - Design of RC members for torsion.

UNIT-4

LIMIT STATE DESIGN OF COLUMNS 12

Types of columns –Axially Loaded columns – Design of short Rectangular, Square and circular columns –Design of Slender columns- Design for Uniaxial and Biaxial bending using Column Curves

UNIT-5

LIMIT STATE DESIGN OF FOOTING AND DETAILING 12

Concepts of Proportioning footings and foundations based on soil properties-Design of wallfooting - Design of axially and eccentrically loaded Square, Rectangular pad and sloped footings – Design of Combined Rectangular footing for two columnsonly.

TOTAL HOURS TO BE TAUGHT 60

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: Use the IS codes for analysis and design of RC structures.

CO.2: analyse and design beams and slabs by limit state

CO.3: Design the beams for shear and torsion

CO.4: Design columns for axial, uniaxial and biaxial eccentricloadings.

CO.5: Design of footing by limit statemethod.

518CET04 FOUNDATION ENGINEERING

L	T	P	C
3	0	0	3

OBJECTIVES

- To impart knowledge to plan and execute a detail site investigation programme
- To select geotechnical design parameters and type of foundations
- To impart knowledge on types of shallow foundations
- To impart knowledge on pile foundations
- To familiarize the students for the geotechnical design of different type of foundations and retaining walls.

UNIT-1 SITE INVESTIGATION AND SELECTION OF FOUNDATION 12

Scope and objectives – Methods of soil exploration-augering and boring – Water boring and rotatory drilling – Depth of boring – Spacing of bore hole - Sampling – disturbed and undisturbed sampling – sampling techniques – Split spoon sampler, Thin tube sampler, Stationary piston sampler – Bore log report – Penetration tests (SPT and SCPT) – Geo physical exploration methods (Seismic refraction and Electrical Resistivity)Data interpretation (Strength parameters and Liquefaction potential) – Selection of foundation based on soil condition.

UNIT-2 SHALLOW FOUNDATIONS. 12

Introduction – Location and depth of foundation – Codal provisions – bearing capacity of shallow foundation on homogeneous deposits – Terzaghi's formula and BIS formula – factors affecting bearing capacity – problems - Bearing Capacity from insitu tests (SPT, SCPT and plate load) – Allowable bearing pressure, Settlement – Components of settlement – Determination of settlement of foundations on granular and clay deposits – Allowable settlements – Codal provision – Methods of minimising settlement, differential settlement

UNIT-3 FOOTINGS AND RAFTS 12

Types of foundation – Contact pressure distribution below footings & raft - Isolated and combined footings – types – proportioning - mat foundation – types – use - proportioning – floating foundation.

UNIT-4 PILES 12

Types of piles and their function – Factors influencing the selection of pile – Carrying capacity of single pile in granular and cohesive soil - Static formula - dynamic formulae (Engineering news and Hiley's) – Capacity from insitu tests (SPT and SCPT) – Negative skin friction – uplift capacity – Group capacity by different methods (Feld's rule, Converse Labara formula and block failure criterion) – Settlement of pile groups – Interpretation of pile load test – Forces on pile caps – under reamed piles – Capacity under compression and uplift.

UNIT-5 RETAINING WALLS **12**

Plastic equilibrium in soils – active and passive states – Rankine's theory – cohesionless and cohesive soil - Coloumb's wedge theory – condition for critical failure plane - Earth pressure on retaining walls of simple configurations – Graphical methods (Rebhann and Culmann) - pressure on the wall due to line load – Stability of retaining walls.Machine foundation

TOTAL HOURS TO BE TAUGHT **60**

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: Understand the site investigation, methods and sampling
CO.2: Get knowledge on bearing capacity and testing methods
CO.3: Design shallow footings
CO.4: Determine the load carrying capacity, settlement of pile foundation
CO.5: Determine the erth pressure on retaining walls and analysis for stability

518CET05 CONCRETE TECHNOLOGY L T P C

3 0 0 3

COURSE OBJECTIVES

- To impart knowledge to the students on the properties of materials for ordinary concrete
- To impart knowlwdge on different chemical and mineral admixtures
- To impart knowledge to the students on mix design procedure.
- To impart knowledge to the students on different tests on properties of concrete.
- To impart knowledge to the students on the properties of special concrete

UNIT-1 CONSTITUENT MATERIALS 9

Cement-Different types-Chemical composition and Properties -Tests on cement-IS Specifications-Aggregates-Classification-Mechanical properties and tests as per BIS Grading requirements- Water-Quality of water for use in concrete.

UNIT-2 CHEMICAL AND MINERAL ADMIXTURES 9

Accelerators-Retarders- Plasticisers- Super plasticizers- Water proofers - Mineral Admixtures like Fly Ash, Silica Fume, Ground Granulated Blast Furnace Slag and Metakaoline -Their effects on concrete properties

UNIT-3 PROPORTIONING OF CONCRETE MIX 9

Principles of Mix Proportioning-Properties of concrete related to Mix Design-Physical properties of materials required for Mix Design - Design Mix and Nominal Mix-BIS Method of Mix Design - Mix Design Examples

UNIT-4 FRESH AND HARDENED PROPERTIES OF CONCRETE 9

Workability-Tests for workability of concrete-Slump Test and Compacting factor Test-Segregation and Bleeding-Determination of Compressive and Flexural strength as per BIS - Properties of Hardened concrete-Determination of Compressive and Flexural strength-Stress-strain curve for concrete-Determination of Young's Modulus

UNIT-5 SPECIAL CONCRETES 9

Light weight concretes - High strength concrete - Fibre reinforced concrete – Ferrocement - Ready mix concrete - SIFCON-Shotcrete – Polymer concrete - High performance concrete- Geopolymer Concrete

TOTAL HOURS TO BE TAUGHT 40

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: To know the properties of materials required for concrete

CO.2: To know the use of different chemical and mineral admixtures used in concrete

CO.3: To know the design procedures for making concrete

CO.4: To know the tests on concrete - Fresh and hardened concrete

CO.5 : To know the properties of different materials used for making special concrete

518CEE01 REMOTE SENSING **L T P C**

3 0 0 3

OBJECTIVES

- To make the students to understand the concepts, components and source of remote sensing
- To gain knowledge about different types of remote sensing platforms and sensors
- To explain the concept of satellite image interpretation
- To understand the applications of remote sensing in Civil Engineering
- To gain knowledge on data interpretation cocepts

UNIT-1 REMOTE SENSING AND ELECTROMAGNETIC RADIATION 9

Definition – components of RS – History of Remote Sensing – Merits and demerits of data collation between conventional and remote sensing methods - Electromagnetic Spectrum – Radiation principles - Wave theory, Planck's law, Wien's Displacement Law, Stefan's Boltzmann law, Kirchoff's law – Radiation sources: active & passive - Radiation Quantities

UNIT-2 EMR INTERACTION WITH ATMOSPHERE AND EARTH MATERIAL 9

Standard atmospheric profile – main atmospheric regions and its characteristics – interaction of radiation with atmosphere – Scattering, absorption and refraction – Atmospheric windows - Energy balance equation – Specular and diffuse reflectors – Spectral reflectance & emittance – Spectroradiometer – Spectral Signature concepts – Typical spectral reflectance curves for vegetation, soil and water – solid surface scattering in microwave region.

UNIT-3 ORBITS AND PLATFORMS 9

Motions of planets and satellites – Newton's law of gravitation - Gravitational field and potential - Escape velocity - Kepler's law of planetary motion - Orbit elements and types – Orbital perturbations and maneuvers – Types of remote sensing platforms - Ground based, Airborne platforms and Space borne platforms – Classification of satellites – Sun synchronous and Geosynchronous satellites – Legrange Orbit.

UNIT-4 SENSING TECHNIQUES 9

Classification of remote sensors – Resolution concept : spatial, spectral, radiometric and temporal resolutions - Scanners - Along and across track scanners – Optical-infrared sensors – Thermal sensors – microwave sensors – Calibration of sensors - High Resolution Sensors - LIDAR , UAV –Orbital and sensor characteristics of live Indian earth observation satellites

UNIT-5 DATA INTERPRETATION AND CIVIL ENGINEERING APPLICATIONS 9

Photographic and digital products – Types, levels and open source satellite data products — selection and procurement of data– Visual interpretation: basic elements and interpretation keys – Digital interpretation – Concepts of Image rectification, Image enhancement and Image classification – Civil Engineering applications: highway and railway alignments, site selection for dams, town and regional planning

TOTAL HOURS TO BE TAUGHT **45**

COURSE OUTCOMES: After undergoing the course, the students will have ability to

CO.1: understand the concepts and laws related to remote sensing

CO.2: understand the interaction of electromagnetic radiation with atmosphere and earth material

CO.3: acquire knowledge about satellite orbits and different types of satellites

CO.4: understand the different types of remote sensors

CO.5: gain knowledge about the concepts of interpretation of satellite imagery and civil engineering applications

518CEP07 ENVIRONMENTAL ENGINEERING LABORATORY L T P C
3 0 0 3

OBJECTIVES

- to determine the acidity of water
- to determine chlorine content in water
- to determine dissolved oxygen in water
- to determine various solid content in water
- to determine b.o.d and c.o.d in water

LIST OF EXPERIMENTS

1. Sampling and preservation methods and significance of characterisation of water and wastewater
2. Determination of
i)P^H and turbidity ii)Hardness
3. Determination of iron & fluoride
4. Determination of residual chlorine
5. Determination of Chlorides
6. Determination of Ammonia Nitrogen
7. Determination of Sulphate
8. Determination of Optimum Coagulant Dosage
9. Determination of available Chlorine in Bleaching powder
10. Determination of dissolved oxygen
11. Determination of suspended, volatile and fixed solids
12. B.O.D. test
13. C.O.D. test
14. Determination of Total Phosporous
15. Introduction to Bacteriological Analysis (Demonstration only)

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

Co .1: Determine the amount of various minerals present in water.

CO.2: Conduct test to determine chlorine in bleaching powder

CO.3: Conduct DO & BOD test.

CO.4: Conduct COD test.

CO.5: Conduct Bacteriological Analysis

518CEP08 SOIL MECHANICS LABORATORY L T P C
3 0 0 3

OBJECTIVES

- to determine the water content in soil
- to perform particle size distribution of soil
- to determine the density of soil
- to determine the optimum moisture content in soil
- to determine the permeability of soil

LIST OF EXPERIMENTS :

1. Determination of water content by oven drying method
2. Determination of Grain size distribution
   a) Sieve analysis
   b) Hydrometer analysis
3. Determination of Field density
   a) Core Cutter Method
   b) Sand Replacement Method
4. Determination of Specific gravity of soil grains
5. Determination of Relative density of sands
6. Determination of Atterberg limits test –Liquid limit ,Plastic limit & Shrinkage limit
7. Determination of Optimum Moisture Content & Maximum Dry Density - Standard Proctor test.
8. Determination of Permeability -Constant head and Falling head methods
9. Determination of shear strength parameters.
   a) Direct shear test on cohesion less soil
   b) Unconfined compression test on cohesive soil
   c) Triaxial compression test
   d) Vane shear test
10. Determination of co-efficient of consolidation -One dimensional consolidation test

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: To Gain knowledge about Grain size distribution of soil
CO.2: To know fundamentals of Atterberg limits .
CO.3: To Determine the Field density and permeability of soil.
CO.4: To Evaluate the shear strength of soil.
CO.5: To Determine co-efficient of consolidation

518CEP09	Computer Aided Design – I	L T P C 0 0 3 2

OBJECTIVES

- to draft on computer building drawings (Plan, elevation and sectional views) of a load bearing walls
- to draft on computer building drawings (Plan, elevation and sectional views) of a details of doors and windows
- to draft on computer of one and two storey RCC Framed structures
- to draft on computer of a different types of trusses
- To learn the principle to draw perspectives views of one and two storey buildings

LIST OF EXPERIMENTS :

1. Drawing of buildings with load bearing walls (Drawing of Flat and pitched roof) – Including details of doors and windows
2. RCC framed structures – One and Two storey building(Plan, Section and Elevation)
3. Industrial buildings – North light roof structures – Trusses
4. Perspective view of one and two storey buildings

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: Draw the load bearing walls
CO.2: Draw the details of doors and windows
CO.3: Draw the different types of roofs trusses
CO.4: Draw the plan sectional elevation of a structure
CO.5: Draw the different views of a structure

REFERENCE:

1. Building drawing – Shah, Tata McGraw-Hill
2. Building planning & Drawing – Dr. N. Kumaraswamy, A. KameswaraRao Charotar Publishing

618CET01 Transportation Engineering – II

L	T	P	C
3	0	0	2

OBJECTIVES

- To provide the knowledge of planning, design, construction and maintenance of railway tracks.
- To introduce the application of modern techniques such as GIS, GPS and remote sensing in Railway Engineering.
- To study about the airport planning and design
- To gain knowledge about Airport layouts and visual aids
- To study about the planning of harbours & coastal structures.

UNIT-1 **RAILWAY PLANNING AND DESIGN** 12

Role of Indian Railways in National Development - Engineering Surveys for Track Alignment – Obligatory points - Conventional and Modern methods (Remote Sensing, GIS & GPS, EDM and other equipment) Permanent Way, its Components and Functions of each Component: Rails - Types of Rails, Rail Fastenings, Concept of Gauges, Coning of Wheels, Creeps and kinks Sleepers – Functions, Materials, Density Ballasts – Functions, Materials, Ballast less Tracks Geometric Design of Railway Tracks – Gradients and Grade Compensation, Super-Elevation, Widening of Gauges in Curves, Transition Curves, Horizontal and Vertical Curves

UNIT-2 **RAILWAY TRACK CONSTRUCTION, MAINTENANCE AND OPERATION** 12

Points and Crossings - Design of Turnouts, Working Principle Signalling-Interlocking and Track Circuiting Construction & Maintenance – Conventional, Modern methods and Materials-Track Drainage Track Modernisation– Automated maintenance and upgrading, Technologies, Re-laying of Track-Lay outs of Railway Stations and Yards-Rolling Stock-Tractive Power-Track Resistance-Level Crossings.

UNIT-3 **AIRPORT PLANNING AND DESIGN** 12

Advantages and Limitations of Air Transport, Components of Airports-Airport Planning – Air traffic potential, Site Selection, Design of Components, Cost Estimates, Evaluation and Institutional arrangements Runway Design- Orientation, Cross wind Component, Wind rose Diagram (Problems), Geometric Design and Corrections for Gradients (Problems)-Drainage Taxiway Design – Geometric Design Elements, Minimum Separation Distances, Design Speed-Airport Drainage Airport Zoning - Clear Zone, Approach Zone, Buffer Zone, Turning Zone, Clearance over Highways and Railways.

UNIT-4 **AIRPORT LAYOUTS, VISUAL AIDS, AND AIR TRAFFIC CONTROL** 12

Airport Layouts – Apron, Terminal Building, Hangars, Motor Vehicle Parking Area and - Circulation Pattern, Case studies of Airport Layouts-Airport Buildings – Primary functions, Planning Concept, Principles of Passenger Flow, Passenger Facilities Visual Aids – Runway and Taxiway Markings, Wind Direction Indicators, Runway and Taxiway Lightings-Air Traffic Control – Basic Actions, Air Traffic Control Network Helipads, Hangars.

UNIT-5 **HARBOUR ENGINEERING** 12

Definition of Terms - Harbours, Ports, Docks, Tides and Waves, Littoral Drift, Sounding, Area, Depth, Satellite Ports Requirements and Classification of Harbours Site Selection & Selection Investigation –Dredging, Range of Tides, Waves and Tidal Currents, Littoral Transport with Erosion and Deposition, Winds & Storms, , Construction Materials, Coast Lines Dry and Wet Docks,, Planning and Layouts Entrance, Position of Light Houses, Navigating Terminal Facilities – Port Buildings, Warehouse, Transit Sheds, Inter-modal Transfer Facilities, Mooring Accessories, Navigational Aids-Coastal Structures- Piers, Breakwaters, Wharves, Jetties, Quays, Spring Fenders.

TOTAL HOURS TO BE TAUGHT **60**

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: Plan and do the geometric design of the railway track and its elements.

CO.2: Design turn outs and modern method of maintenance of railway track

CO.3: Plan and design of the Runway and Taxiway

CO.4: Design the elements of an airport and its layout, aids and traffic control.

CO.5: Understand different terminologies in harbour Engineering

618CET01 Structural Analysis – II

L T P C
3 0 0 3

OBJECTIVES

- To learn the matrix methods of analysis of beams and frames.
- To understand the various methods of analysis of indeterminate structures.
- To understand the principles of plastic analysis and behaviour of indeterminate structures.
- To study the analysis of space structures
- To understand Principles of and suspension cables

UNIT-1 **FLEXIBILITY METHOD FOR INDETERMINATE FRAMES** 12

Equilibrium and compatibility – Determinate and Indeterminate structures – Indeterminacy - Primary structure – Compatibility conditions – Analysis of indeterminate pin-jointed plane frames, continuous beams, rigid jointed plane frames (with redundancy up to two).

UNIT-2 **MATRIX STIFFNESS METHOD** 12

Element and global stiffness matrices – Analysis of continuous beams – Co-ordinate transformations – Rotation matrix – Transformations of stiffness matrices, load vectors and displacements vectors – Analysis of pin-jointed plane frames and rigid frames.

UNIT-3 **FINITE ELEMENT METHOD** 12

Introduction – Discretisation of a structure –Displacement functions-Truss element-Beam element-Plane stress and plane strain- Triangular elements.

UNIT-4 **PLASTIC ANALYSIS OF STRUCTURES**12

Statically indeterminate axial problems – Beams in pure bending – Plastic moment of resistance – Plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism – Plastic analysis of indeterminate beams and frames – Upper and lower bound theorems .

UNIT-5 **SPACE AND CABLE STRUCTURES** 12

Analysis of Space trusses using method of tension coefficients – Beams curved in plan Suspension cables - cables with two and three hinged stiffening girders

TOTAL HOURS TO BE TAUGHT **60**

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

Co .1: Analyse determinant and Indeterminate structure using Flexible method
CO.2: Analyse structures using matrix methods.
CO.3: Understand the basics of Finite Element Methods.
CO.4: Know about plastic analysis of intermediate beams and frames.
CO.5: Analyse space truss and suspension cables.

618CET02 Design of Steel Structures **L T P C**
3 0 0 3

OBJECTIVES

- To introduce the students to the limit state design concepts for steel design
- To study the design concepts of tension members.
- To study the design concepts of compression members.
- To study the design concepts of beams,
- To study the design concepts roof trusses and industrial structures.

UNIT-1 INTRODUCTION **12**

Properties of steel – Structural steel sections – Limit State Design Concepts – Loads on Structures – Metal joining methods using welding & bolting – Design of bolted and welded joints – Eccentric connections - Efficiency of joints – High Tension bolts.

UNIT-2 TENSION MEMBERS **12**

Types of sections – Net area – Net effective sections for angles and Tee in tension – Design of connections in tension members – Use of lug angles – Design of tension splice – Concept of shear lag

UNIT-3 COMPRESSION MEMBERS **12**

Types of compression members – Theory of columns – Basis of current codal provision for compression member design – Slenderness ratio – Design of single section and compound section compression members – Design of lacing and battening type columns – Design of column bases – Gusseted base

UNIT-4 BEAMS **12**

Design of laterally supported and unsupported beams – Built up beams – Beams subjected to biaxial bending – Design of plate girders welded – Intermediate and bearing stiffeners – Web splices – Design of beam columns

UNIT-5 ROOF TRUSSES AND INDUSTRIAL STRUCTURES **12**

Roof trusses – Roof and side coverings – Design loads, design of purlin and elements of truss; end bearing – Design of gantry girder

TOTAL HOURS TO BE TAUGHT **60**

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: Design steel structure elements using limit state design concept.

CO.2: Design bolted and welded joints.

CO.3: Use IS codes and Design tension, compression members and beams.

CO.4: Design roof trusses.

CO.5: Design Gantry girders and other industrial structures.

618CEE02 **Sanitary Engineering** **L T P C**
3 0 0 3

OBJECTIVES

- Learn about the sources of waste water ,disposal and design of storm flow
- Know Design of sewer, sewer material and appurtenances.
- Compute the quantity and characteristics of wastewater.
- Point out the disposal methods of effluents
- Express the design principles of various unit operations and processes for sewage treatment system.

UNIT-1

INTRODUCTION **9**

Sources of waste water-Necessity for sanitation, methods of domestic waste water disposal, types of sewerage systems and their suitability. Dry weather flow, factors affecting dry weather flow, flow variations and their effects on design of sewerage system; computation of design flow, estimation of storm flow, rational method and empirical formulae of design of storm water drain. Time of concentration.

UNIT-2

DESIGN OF SEWERS, MATERIALS OF SEWERS AND SEWER APPURTENANCES 9

Hydraulic formulae for velocity, effects of flow variations on velocity, self-cleansing and non-scouring velocities, Design of hydraulic elements for circular sewers flowing full and flowing partially full (No derivations).Sewer materials, shapes of sewers, laying of sewers, joints and testing of sewers, ventilation and cleaning of sewers. Catch basins, manholes, flushing tanks, oil and grease traps, Drainage traps. Basic principles of house drainage. Typical layout plan showing house drainage connections, maintenance of house drainage.

UNIT-3

WASTE WATER CHARACTERIZATION9

Sampling, significance, techniques and frequency. Physical, Chemical and Biological characteristics, Aerobic and Anaerobic activity, CNS cycles. BOD and COD. Their significance & problems

UNIT-4

DISPOSAL OF EFFLUENTS 9

Disposal of Effluents by dilution, self-purification phenomenon. Oxygen sag curve, Zones of purification, Sewage farming, sewage sickness, Effluent Disposal standards for land, surface water & ocean. Numerical Problems on Disposal of Effluents. Streeter Phelps equation.

UNIT-5

TREATMENT OF WASTE WATER AND SECONDARY TREATMENT 9

Flow diagram of municipal waste water treatment plant. Preliminary & Primary treatment: Screening, grit chambers, skimming tanks, and primary sedimentation tanks – Design criteria & Design examples. Suspended growth, Trickling filter – theory and operation, types and designs.

Activated sludge process- Principle and flow diagram, Design of ASP. Anaerobic Sludge digestion, Sludge digestion tanks, Design of Sludge drying beds. Low cost waste treatment method. Septic tank, Oxidation Pond and Oxidation ditches – Design. Reuse and recycle of waste water-A Case Study of Treatment and Reuse of Waste Water.

TOTAL HOURS TO BE TAUGHT **45**

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: Learn about waste water sources and collection.
CO.2: The different types of Sewer systems.
CO.3: Know and identify waste water characterization
CO.4: Disposal the effluents in most efficient manner
CO.5: Design the unit processes for conventional and advanced waste water treatment

618CEP07 COMPUTER AIDED DESIGN LABORATORY – II L T P C
0 0 3 1

OBJECTIVES to design and draft structural drawings of retaining walls

- to design and draft structural drawings of RCC bridges
- to design and draft structural drawings of steel bridges
- to draft structural drawings of connections in bridges
- to design and draft structural drawings of water tanks

1. Design and drawing of RCC cantilever retaining walls with reinforcement details
2. Design and drawing of RCC counterfort type retaining walls with reinforcement details
3. Design of solid slab bridge for IRC loading and reinforcement details
4. Design of RCC Tee beam bridges for IRC loading and reinforcement details
5. Design and detailed drawings including connections of plate girder bridge
6. Design and detailed drawings including connections of Twin Girder deck type railway bridge
7. Design and detailed drawings including connections of Truss Girder bridges
8. Design of pressed, rectangular and hemispherical bottomed steel tank – Staging – Detailed drawings
9. Design and drafting of Intz type water tank
10. Design and detailing of circular and rectangular water tanks

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: design and draft retaining walls with reinforcement details
CO.2: design the solid slab and RCC tee beam bridges.
CO.3: design and draft steel bridges
CO.4: design and draft connections
CO.5: design and draft different types of water tanks

618CEP09 EXTENSIVE SURVEY CAMP **L T P C**

0 0 3 2

OBJECTIVES

- Fifteen days survey camp using Theodolite, Cross staff, levelling staff, tapes, GPS and Total station. The camp must involve work on a large area of not less than 200 hectares.
- Able to survey the given areas using Triangulation survey, Trilateration
- Able to operate Total Station
- Able to carry out LS/CS for the road project by using Total Station
- Able to do sun observation to determine Azimuth
- Able to prepare final Auto CADD drawings of the Projects

EVALUATION PROCEDURE

1. Internal Marks : 50 marks
   (decided by the staff in-charge)
2. Viva voce examination : 50 marks

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: Survey the given area using triangulation survey.
CO.2: Determine the latitude &longitude of a given point or position
CO.3: Study about the moment of sun using astronomical surveying.
CO.4: Able to plot the contour by using Total Station

618CEP08 CONCRETE AND HIGHWAY ENGINEERING LABORATORY

L	T	P	C
0	0	3	2

OBJECTIVES

- To determine the workability of concrete through different methods
- To determine the compressive strength of concrete
- To determine the split tensile strength of concrete cylinder
- To determine the various properties of bitumen
- To determine the properties of bituminous mix

LIST OF EXPERIMENTS

I TESTS ON FRESH CONCRETE

1. Slump Cone Test
2. Compaction Factor
3. Vee Bee Test

II TESTS ON HARDENED CONCRETE

1. Compressive Strength of concrete Cube
2. Split Tensile Strength on concrete Cylinder

III TESTS ON BITUMEN

1. Flash and fire point test
2. Specific gravity test
3. Penetration Test
4. Softening point Test
5. Ductility Test
6. Viscosity Test

III TESTS ON BITUMINOUS MIXES

1. Determination of Binder content
2. Marshall Stability and Flow values

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1: Determine the workability of concrete
CO.2: Determine the properties of hardened concrete
CO.3: Find out the properties of bitumen
CO.4: Find out the properties of bitumen mixes
CO.5: know the techniques to characterize various pavement materials through relevant tests.

618CEE09 Ground water Engineering

L	T	P	C
3	0	0	3

OBJECTIVES

- To gain knowledge of historical background of groundwater, aquifer types and its properties.
- To study about groundwater hydraulics
- To evaluate aquifer parameters and well characteristics
- To enhance their knowledge on well characteristics and groundwater exploration.
- To study about groundwater basin management systems.

UNIT-1 AQUIFER AND AQUIFER PARAMETERS **9**

Historical background of ground water- Utilization of groundwater hydrological cycle-groundwater-aquifer-types of aquifer-porosity, specific yield - Storage coefficient-Transmissivity, Intrinsic Permeability-Hydraulic conductivity

UNIT-2 GROUNDWATER HYDRAULICS **9**

Darcy's equation- governing equation of groundwater flow – steady and unsteady flow equations for confined and leaky aquifer-water table aquifer-Dupuit Forcheimer assumption-one dimensional flow-well hydraulics-Hydrogeological boundaries -Concept of image

UNIT-3 EVALUATION OF AQUIFER PARAMETERS AND WELL CHARACTERISTICS **9**

Evaluation of aquifer parameters- pumping test analysis-confined and leaky aquifer- well characteristics- well theory- interference of Wells-Partial penetration of wells. specific capacity-step draw down test

UNIT-4 GROUNDWATER EXPLORATION **9**

Geological method-geophysical method –Electrical resistivity method- water well classification-drilling of deep wells- well design, construction and maintenance-well development-collector wells and infiltration galleries

UNIT-5 GROUNDWATER BASIN MANAGEMENT AND CONJUCTIVE USE **9**

Groundwater recharge- Artificial recharge- methods of artificial recharge-Groundwater basin management-Conjunctive use - Mathematical Model of a basin- groundwater balance equation-groundwater pollution and groundwater legislation

TOTAL HOURS TO BE TAUGHT **45**

COURSE OUTCOMES:

After undergoing the course, the students will have ability to :

CO.1 Analyze the basics of ground water engineering.

CO.2 Develop skills in analyzing steady flow and unsteady flow situation in groundwater studies.

CO.3 Gain knowledge about groundwater exploration and designing of wells.
CO.4 Evaluate artificial recharge methods and structures for groundwater management.
CO.5 Apply creative and innovative technique on conservation of water

618ARO01 PERSONALITY DEVELOPMENT

L	T	P	C
2	0	0	2

OBJECTIVES

- To build confidence and guide thought process.
- To help the students achieve effectiveness in their professional activities, harness skills
- To develop qualities suited for the profession.
- To groom students' attitude
- To develop communication skill among students

UNIT-1 PERSONALITY **5**

Nature of personality. Theories of personality- Type, Trait, Social Learning. Determinants of personality, Personality traits.

UNIT-2 ATTITUDE BUILDING **6**

Importance of attitude, factors that determine our attitude, types of attitude, building positive attitude, developing optimism and discipline.

UNIT-3 GROUP AND TEAM WORK **6**

Group and Team dynamics, Group Structuring- Leadership, role, Tasks, effective team work. Exercises to understand the nature of a team, team building, members and achieving a given task. Purpose (Intellectual ability, creativity, approach to a problem, solving, tolerance, qualities of a leader). Group behavior, Analyzing performance

UNIT-4 COMMUNICATION SKILLS **6**

Verbal communication, Body language, Vocabulary building, Public speaking and extempore speech skills, Presentation skills, Panel discussions. Written communication- Letters, reports etc. Conflict Management, Assertiveness, Time management.

UNIT-5 TIME &STRESS MANAGEMENT **5**

Types of time, Identifying time wasters, Time management skills. Importance, Causes, Stress relief mechanisms

TOTAL HOURS TO BE TAUGHT **31**

		L	T	P	C	CA	EA	TOTAL
715CET01	ESTIMATION AND QUANTITY SURVEYING	3	1	0	4	50	50	100
OBJECTIVES	1. To study the basic concepts of estimation and methods for estimation 2. To study the various aspects of estimating of quantities of items of works involved in buildings. 3. To gain knowledge about estimating other civil Engineering structures 4. To gain knowledge about the rate analysis for estimation of various items 5. To study about PWD Accounts and Procedures							
UNIT-1	INTRODUCTION				TOTAL HOURS	12 HOURS		
Estimate, Data for estimate, Types of estimates -Preliminary, Plinth area, Cube rate, Approximate quantity, Detailed, Revised, Supplementary and Annual repair. Abstract of estimate; Floor area; Circulation area; Carpet area.								
UNIT-2	ESTIMATE OF BUILDINGS				TOTAL HOURS	12 HOURS		
Load bearing and framed structures – Calculation of quantities of Earthwork, PCC, R.R. Stone work, DPC, Brick work, RCC, Plastering, white washing, colour washing and painting / varnishing for residential, Commercial and Industrial buildings with flat and pitched roof – Various types of arches – Calculation of brick work and RCC works in arches.								
UNIT-3	ESTIMATE OF OTHER STRUCTURES				TOTAL HOURS	12 HOURS		
Estimating of septic tank, soak pit – sanitary and water supply installations –estimate of earth work of road by three methods from L - Section- estimate of bituminous and cement concrete roads – estimate of retaining walls–estimate of earth work irrigation channels of different cases-Preparation of Bar bending schedule								
UNIT-4	ANALYSIS OF RATES & SPECIFICATIONS.				TOTAL HOURS	12 HOURS		

Data – Schedule of rates –Preparing Analysis of rates for different items of works–Transport of material –Estimate of transport work- Specifications – Writing specification for different items of works - Detailed and general specifications.			
UNIT-5	**P.W.D. ACCOUNTS AND PROCEDURE FOR WORKS**	TOTAL HOURS	12 HOURS
Works; Classification of works-Original, Major, Minor, Petty, Repair works; Annul repair,. Quadrennial repair, Special repair works, Contract, Tender; Tender Notice; Earnest money; Security money; Arranging contract; Power of accepting tender, E Tender, Tender notice, Methods of carrying out works – Daily labour; Muster Roll, Preparation of M.R-Administrative sanction,Expenditure sanction Technical sanction			
TOTAL HOURS TO BE TAUGHT			**60 HOURS**
COURSE OUTCOMES:			
After undergoing the course, the students will have ability to			
CO.1	Estimate the quantities of different items in buildings		
CO2	Estimate the quantities of water supply and sanitary works, Roads and irrigation works		
CO.3	Design the bar bending schedule		
CO4	Analyse the rates of the quantities and estimate the material quantity		
CO.5	Prepare a bill of quantities, make specifications and prepare tender documents.

715CET02	**GROUND IMPROVEMENT TECHNIQUES**	**3**	**0**	**0**	**3**	**50**	**50**	**100**
OBJECTIVES	• to identify basic deficiencies of various soil deposits • to decide various ways and means of improving the soil and implementing various techniques of ground improvement • to understand the different techniques to improve the characteristics of different soils • to gain knowledge on various ground improvement methods • to impart knowledge on different grouting methods							
UNIT-1	**INTRODUCTION**				TOTAL HOURS	9 HOURS		
Role &methods of ground improvement – Geotechnical problems in alluvial, laterite and black cotton soils -Selection of suitable ground improvement techniques based on soil conditions.								
UNIT-2	**DRAINAGE AND DEWATERING**				TOTAL HOURS	9 HOURS		
Drainage techniques - Well points - Vaccum and electro-osmotic methods - Seepage analysis for two dimensional flow-fully and partially penetrating soils in homogenous deposits (Simple cases only).								
UNIT-3	**INSITU TREATMENT OF COHESIONLESS AND COHESIVE SOILS**				TOTAL HOURS	9 HOURS		
Insitu densification of cohesionless and consolidation of cohesive soils -Dynamic compaction and consolidation - Vibrofloation - Sand pile compaction - Preloading with sand drains and fabric drains – Stone columns – Lime piles - Installation techniques - relative merits of various methods and their limitations.								
UNIT-4	**EARTH REINFORCEMENT**				TOTAL HOURS	9 HOURS		

Concept of reinforcement - Types of reinforcement material - Applications of reinforced earth – use of Geotextiles for filtration, drainage and separation in road and other works.			
UNIT-5	**GROUTING TECHNIQUES**	TOTAL HOURS	9 HOURS
Types of grouts - Grouting equipment and groutability ratio- Injection methods - Grout monitoring – Stabilisation with cement, lime and chemicals - Stabilisation of expansive soils			
TOTAL HOURS TO BE TAUGHT			**45 HOURS**
COURSE OUTCOMES:			
After undergoing the course, the students will have ability to			
CO1	identify various problems associated with soil deposits, formulate and methods to evaluate them.		
CO2	demonstrate an ability to design a dewatering system, component or process as per needs and specifications.		
CO3	understand the concept involved for insitu treatment of cohesive and cohesionless soils and ability required to design an appropriate techniques to implement ground improvement methods.		
CO4	understand of soil reinforcement and its uses in various engineering structure. Also, graduate will demonstrate an ability to design reinforced earth retaining structure.		
CO5	demonstrate an ability to design retaining walls, its component or process as per the needs and specifications.

Chairman, Board of
Faculty of Civil Engineering (
Adhiyamaan College of Engineering (Autonomo
Hosur - 635 130
Krishnagiri (Dt.), Tamil Nadu.

Adhiyamaan College of Engineering - Autonomous							R- 2015
Department	Civil Engineering	**Programme Code and Name**			C.E:B.E. Civil Engineering		
Semester- VII							
Course Code	Course Name	Hours/week			Credit	Maximum Marks	
		L	T	P	C	CA	ES	TOTAL
715CEE15	**Architecture and Town Planning**	3	0	0	3	50	50	100
OBJECTIVES	• To know about the principles of architecture design • To impart knowledge on functional planning of buildings • To know about the various building services required foe a building • To know about town planning theory • To study the various planning process in a building							
UNIT-1	**Principles of architectural Design**				TOTAL HOURS	9 HOURS		
Definition of architecture: factors influencing architectural development- characteristic features of a style-historical examples. Creative principles: function/strength, aesthetics – deciding the space and form – detailed analysis of factors influencing the space – activity space, circulation space and tolerance space – Factors influencing form- form perception – form expressive of function-form related with material and Structural system. Design principles – elements of composition – point, line, plane, texture, colour etc. – mass and scale, proportion, rhythm, balance and unity – iconic, canonic and analogic design - consideration of comfort factors such as acoustics, lighting, ventilation and thermal aspects.								
UNIT-2	**Functional planning of buildings**				TOTAL HOURS	9 HOURS		
Occupancy classification of buildings'-general requirements of site and building – building codes and rules – licencing of building works. Functional planning of building such as residential, institutional, public, commercial, industrial buildings – the process of identifying activity areas and linkages – drawing built diagrams – checking for circulation, ventilation, structural requirements and other constraints preparing sketch plan and working drawings – site plans.Municipal acts – planning regulations of corporations and developmental authorities – building bye laws.								
UNIT-3	**Building services**				TOTAL HOURS	9 HOURS		
Vertical Transportation: stairs – layout and details of different types of timber – masonry, steel and concrete stairs – pre-cast concrete stairs, elevators – types – traction, hydraulic operation – passenger, service goods elevators – design considerations of passenger elevators – handling capacity – arrangement of lifts – positioning, escalators, features- operation arrangement – ramps. Ventilation and air conditioning – ventilation requirements -natural and mechanical ventilation – air movement – cross ventilation – effect of orientation – radiation – evaporation, calculation of air conditioning load – summer and winter air conditioning. Plumbing services: typical details of water supply and sewage disposal arrangements for								

residence, hospitals and hostel buildings – standard requirements.			
UNIT-4	**Town planning theory**	TOTAL HOURS	9 HOURS
Evolution of towns: problems of urban growth – beginning of planning acts – ideal town – garden city movement – concept of new towns and conservative theory – comprehensive planning of towns- Survey and analysis of town: fare maps – land use classification – transportation network – housing demographic arid social surveys – economic studies – environmental aspects. Theories of land use planning, transportation planning and housing development.Urban area lineation: urban influence zone – urban region concept of regional planning.			
UNIT-5	**Planning Process**	TOTAL HOURS	9 HOURS
Concept of master plan: structural plan, detailed town planning scheme and act. Estimating future needs: planning standards for different land use allocation for commerce, industries, public amenities, open areas etc. planning standard for density distributions-density zone, planning standards for traffic networks – standards of roads and paths – provision for urban growth-growth models. Plan implementation: town planning legislation and municipal acts – planning control development schemes – urban financing – land aquisitions – slum clearance schemes – pollution control aspects.			
TOTAL HOURS TO BE TAUGHT			45 HOURS
COURSE OUTCOMES			
After undergoing the course, the student will have the ability to			
CO.1	Understand the importance of architecture		
CO.2	Understand the general requirements of site and buildings according to building codes and rules		
CO.3	Know the various design considerations involved in building services		
CO.4	Understand the town planning standards, landscaping features and regulations controlling expansion of the towns and cities		
CO.5	Compose spaces of buildings using design concepts and planning principles.

At the end of this course the student have clear knowledge about Elasticity in rock mechanics 4.To acquire the knowledge about Rock dynamics							
UNIT-1	**GEOLOGICAL SETTING**				TOTAL HOURS		9	
Introduction to rock mechanics, Rocks and its classification-rock as an engineering material, natural rock environment-influence of geological factor on rock and rock masses- Intact rock, Discontinuities and rock structure- In situ pre-existing rock stress, Pore fluids—water flow-influence of time								
UNIT-2	**PROPERTIES OF ROCKS**				TOTAL HOURS		9	
Physical properties of rocks – Density, unit weight and specific gravity Moisture content, degree of saturation, Porosity, Void ratio, -Mechanical properties of rock - uniaxial compressive strength, Tensile Strength Deformability, hydraulic properties of rocks - Permeability, storatvity and Thermal properties of rocks – Strength properties of rocks and rock masses .								
UNIT-3	**ELASTICITY IN ROCK MECHANICS**				TOTAL HOURS		9	
Stresses- Cauchy Stress Principle, State of Stress at a Point, State of Stress on an Inclined Plane, strains Deformation and Finite Strain Tensors, Small Deformation Theory, Applications of theory of elasticity in rock mechanics - Visco-elasticity and rocks - Rock discontinuities -Hemispherical projection methods - In situ stresses - Rock slope engineering - Underground excavation in rock.								
UNIT-4	**ROCK MASS CLASSIFICATION AND TESTING**				TOTAL HOURS		9	
Rock mass rating (RMR) system- Q-system-application of rock mass classification system- Links between the classification systems and rock properties- Use of RES (Rock Engineering Systems)- Testing techniques – tailoring test- test on intact rock-discontinuities-standardized test.								
UNIT-5	**ROCK DYNAMICS AND TIME DEPENDENT ASPECTS**				TOTAL HOURS		9	

Introduction –stress waves-– Glossary of Terms -Elastic, plastic, Viscous, Elastoplasticity, Viscoelasticity Viscoelasticity, Elastoviscoplasticity Creep ,relaxation and fatigue- time dependency in rock engineering- interaction matrices in rock mechanics	
TOTAL HOURS TO BE TAUGHT	**45 HOURS**
COURSE OUTCOMES:	
After undergoing the course, the students will have ability to	
CO.1	know geological factor on rock to solve field problems
CO.2	Classify the rocks, and have the knowledge index properties of rock systems.
CO.3	have clear knowledge about Elasticity in rock mechanics
CO4	acquire the knowledge about Rock dynamics
TEXTBOOKS:	
1.	Engineering rock mechanics –John –A- Hudson ,published by pergamon
2.	Rock Mechanics-For underground mining Authors: Brady, Barry H.G., Brown, E.T-springer

Department	**Civil Engineering**	Programme Code and Name	**CE : B.E. Civil Engineering**	

Semester – VII

Course Code	Course Name	Hours/week			Credit	Maximum Marks		
		L	T	P	C	CA	EA	TOTAL
715CEE08	**TOTAL QUALITY MANAGEMENT**	**3**	**0**	**0**	**3**	**50**	**50**	**100**

OBJECTIVES

- To understand the Total Quality Management concept and principles
- To impart knowledge on various tools available to achieveTotal Quality Management.
- To get aware of managements tools for statistical process control
- To understand the statistical approach for quality control
- To create an awarenessabout the ISO and QS certification process and its need for the industries.

UNIT-1	**INTRODUCTION**	TOTAL HOURS	9 HOURS

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership – Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT-2	**TQM PRINCIPLES**	TOTAL HOURS	9 HOURS

Customer satisfaction – Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement – Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement – Juran Trilogy, PDSA Cycle, 5S, Kaizen, Supplier Partnership – Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures – Basic Concepts, Strategy, Performance Measure.

UNIT-3	**STATISTICAL PROCESS CONTROL (SPC)**	TOTAL HOURS	9 HOURS

The seven tools of quality, Statistical Fundamentals – Measures of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

UNIT-4	**TQM TOOLS**	TOTAL HOURS	9 HOURS

Benchmarking – Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) – House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) – Concept, Improvement Needs, FMEA – Stages of FMEA.

UNIT-5	**QUALITY SYSTEMS**	TOTAL HOURS	9 HOURS
Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System – Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 – Concept, Requirements and Benefits.			
TOTAL HOURS TO BE TAUGHT			**45 HOURS**
COURSE OUTCOMES:			
After undergoing the course, the students will have ability to			
CO.1	Identify the barriers in TQM implementation and resolve the problems.		
CO.2	Provide the quality in products and make the customers satisfied by applying various TQM principles		
CO.3	Implement the management tools in statistical process control		
CO.4	Develop benchmark and able to attain it through appropriate tools		
CO.5	Implement the quality systems

715CEE13	CONSTRUCTION PLANNING & PROJECT MANAGEMENT	3	0	0	3	50	50	100
OBJECTIVES	• To understand the concepts of construction planning • To understand the concepts of scheduling procedures and techniques • To impart knowledge on cost control, monitoring and accounting • To understand about various quality control projects • To organise and use various project information necessary for construction project							
UNIT-1	CONSTRUCTION PLANNING				TOTAL HOURS		9 HOURS	
Basic Concepts in the Development of Construction Plans - Choice of Technology and Construction Method - Defining Work Tasks - Defining Precedence Relationships among Activities - Estimating Activity Durations - Estimating Resource Requirements for Work Activities - Coding Systems.								
UNIT-2	SCHEDULING PROCEDURES AND TECHNIQUES				TOTAL HOURS		9 HOURS	
Construction Schedules - Critical Path Method - Scheduling Calculations - Float - Presenting Project Schedules - Scheduling for Activity-on-Node and with Leads, Lags, and Windows - Scheduling with Resource Constraints and Precedences- Use of Advanced Scheduling Techniques - Scheduling with Uncertain Durations - Calculations for Monte Carlo Schedule Simulation - Crashing and Time/Cost Tradeoffs - Improving the Scheduling Process.								
UNIT-3	COST CONTROL, MONITORING AND ACCOUNTING				TOTAL HOURS		9 HOURS	
The Cost Control Problem - The Project Budget - Forecasting for Activity Cost Control - Financial Accounting Systems and Cost Accounts - Control of Project Cash Flows -Schedule Control -Schedule and Budget Updates - Relating Cost and Schedule Information.								
UNIT-4	QUALITY CONTROL AND SAFETY DURING CONSTRUCTION				TOTAL HOURS		9 HOURS	
Quality and Safety Concerns in Construction - Organizing for Quality and Safety - Work and Material Specifications - Total Quality Control - Quality Control by Statistical Methods - Statistical Quality Control with Sampling by Attributes - Statistical Quality Control with Sampling by Variables Safety.								
UNIT-5	ORGANIZATION AND USE OF PROJECT INFORMATION				TOTAL HOURS		9 HOURS	

Types of Project Information - Accuracy and Use of Information - Computerized Organization and Use of Information - Organizing Information in Databases - Relational Model of Databases -Other Conceptual Models of Databases - Centralized Database Management Systems -Databases and Applications Programs - Information Transfer and Flow.	
TOTAL HOURS TO BE TAUGHT	**45 HOURS**
COURSE OUTCOMES:	
After undergoing the course, the students will have ability to	
CO.1	Understand basic concepts of construction planing.
CO.2	Schedule the construction activities.
CO.3	Forecast and control the cost in a construction.
CO.4	Understand the quality control and safety during construction.
CO.5	Organize information in Centralized database Management systems.

Semester-VII

Course Code	Course Name	Hours/week			Credit
		L	T	P	C
715CEP07	**COMPUTER AIDED DESIGN LABORATORY – II**	0	0	3	2

OBJECTIVES

- to design and draft structural drawings of retaining walls
- to design and draft structural drawings of RCC bridges
- to design and draft structural drawings of steel bridges
- to draft structural drawings of connections in bridges
- to design and draft structural drawings of water tanks

1. Design and drawing of RCC cantilever retaining walls with reinforcement details
2. Design and drawing of RCC counterfort type retaining walls with reinforcement details
3. Design of solid slab bridge for IRC loading and reinforcement details
4. Design of RCC Tee beam bridges for IRC loading and reinforcement details
5. Design and detailed drawings including connections of plate girder bridge
6. Design and detailed drawings including connections of Twin Girder deck type railway bridge
7. Design and detailed drawings including connections of Truss Girder bridges
8. Design of pressed, rectangular and hemispherical bottomed steel tank – Staging – Detailed drawings
9. Design and drafting of Intz type water tank
10. Design and detailing of circular and rectangular water tanks

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1	design and draft retaining walls with reinforcement details
CO.2	design the solid slab and RCC tee beam bridges.
CO.3	design and draft steel bridges
CO.4	design and draft connections
CO.5	design and draft different types of water tanks

OBJECTIVES

- To enable the students to conduct the experimental tests in the field
- To make the students to understand the Field oriented knowledge in various Civil Engineering subjects.

List of Experiments:

1. Measurement of Sound Level and Spot speed
2. Standard Penetration Test
3. Cyclic Loading Test on RC beam
4. NDT Tests
5. Study of Iso-efficiency curve of Impulse Turbine
6. Study of Iso-efficiency curve of Reaction Turbine
7. Preparation of Map by using Total Station and GPS
8. Radar Test

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO.1	Determine the cohesion, bearing capacity of soil.
CO.2	Identify the behaviour and performance of the beams under cyclic loading
CO.3	Prepare the contour maps for the given site or area

Semester-VII							
Course Code	Course Name	Hours / week			Credit	Maximum Marks	
		L	T	P	C	CA	EA
715CEP09	**MINI PROJECT**	0	0	3	2	50	50
OBJECTIVES	The objective of this course is to impart and improve the design capability of the student. This course conceives purely a design problem in any one of the disciplines of Civil Engineering; e.g., Design of an RC structure, Design of a waste water treatment plant, Design of a foundation system, Design of traffic intersection etc. The design problem can be allotted to either an individual student or a group of students comprising of not more than four. At the end of the course the group should submit a complete report on the design problem consisting of the data given, the design calculations, specifications if any and complete set of drawings which follow the design.						
COURSE OUTCOMES:							
After undergoing the course, the students will have ability to							
CO.1	On completion of the design project, students will have a better experience & Knowledge in various design problems related to Civil Engineering.						

Adhiyamaan College of Engineering–Autonomous						Regulation		R-2015

		L	T	P	C	CA	EA	TOTAL
815CET01	**Disaster Mitigation & Management**	4	0	0	4	50	50	100
OBJECTIVES	To provide basic conceptual understanding of disasters and its relationships with global development To understand approaches of Disaster Risk Reduction (DRR) and the relationship between vulnerability, disasters, disaster prevention and risk reduction To get knowledge about information technologies in disaster risk management To enhance awareness of Disaster Risk Management institutional processes in India To build skills to respond to disaster							
UNIT-1	**Introduction to Disaster**				TOTAL HOURS		12 HOURS	
Definition: Disaster, Hazard, Vulnerability, Resilience, Risks – Disasters: Types of disasters – Earthquake, Landslide, Flood, Drought, Fire etc - Classification, Causes, Impacts including social,economic, political, environmental, health, psychosocial, etc.- Differential impacts- in terms ofcaste, class, gender, age, location, disability - Global trends in disasters: urban disasters,pandemics, complex emergencies, Climate change- Dos and Don'ts during various types of Disasters								
UNIT-2	**Approaches to disaster risk reduction (DRR)**				TOTAL HOURS		12 HOURS	
Disaster cycle - Phases, Culture of safety, prevention, mitigation and preparedness community based DRR, Structural- nonstructural measures, Roles and responsibilities of- community, Panchayati Raj Institutions/Urban Local Bodies (PRIs/ULBs), States, Centre, and other stakeholders-Institutional Processess and Framework at State and Central Level- State Disaster Management Authority (SDMA) – Early Warning System – Advisories from Appropriate Agencies.								
UNIT-3	**Inter-relationship between disasters and development**				TOTAL HOURS		12 HOURS	
Factors affecting Vulnerabilities, differential impacts, impact of Development projects such as dams, embankments, changes in Land-use etc.- Climate Change Adaptation- IPCC Scenario and Scenarios in the context of India - Relevance of indigenous knowledge, appropriate technology and local resources.								
UNIT-4	**Disaster risk management in India**				TOTAL HOURS		12 HOURS	
Hazard and Vulnerability profile of India, Components of Disaster Relief: Water, Food, Sanitation, Shelter, Health, Waste Management, Institutional arrangements (Mitigation, Response and								

Preparedness, Disaster Management Act and Policy - Other related policies, plans, programmes and legislation – Role of GIS and Information Technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster – Disaster Damage Assessment			
UNIT-5	**Disaster management: Applications and case studies and fieldworks**	TOTAL HOURS	12 HOURS
Landslide Hazard Zonation: Case Studies, Earthquake Vulnerability Assessment of Buildings and Infrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm Surge Assessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Made disasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field works related to disaster management.			
TOTAL HOURS TO BE TAUGHT			60 HOURS

COURSE OUTCOMES:

After undergoing the course, the students will have ability to

CO1	Understand the concepts, definitions of hazards and disasters.
CO2	Outline the disaster risk reduction strategies.
CO3	Understand concepts of Inter-relationship between disasters and development.
CO4	Describe the preparedness in disaster management.
CO5	Know the case studies in disaster management.

815CEE01	REPAIRS AND REHABILITATION OF STRUCTURES	3	0	0	3	50	50	100
OBJECTIVES	To get the knowledge on quality of concrete, durability aspects, causes of deterioration, assessment of distressed structures, repairing of structures and demolition procedures.							
UNIT-1	MAINTENANCE AND REPAIR STRATEGIES				TOTAL HOURS	9 HOURS		
Maintenance- repair and rehabilitation-Facets of Maintenance- importance of Maintenance various aspects of Inspection- Assessment procedure for evaluating a damaged structure- causes of deterioration.								
UNIT-2	SERVICEABILITY AND DURABILITY OF CONCRETE				TOTAL HOURS	9 HOURS		
Quality assurance for concrete construction concrete properties – strength- permeability- thermal properties and cracking – Effects due to climate- temperature- chemicals- corrosion – design and construction errors – Effects of cover thickness and cracking.								
UNIT-3	MATERIALS AND TECHNIQUES FOR REPAIR				TOTAL HOURS	9 HOURS		
Special concretes and mortar- concrete chemicals- special elements for accelerated strength gain-Expansive cement-polymer concrete- sulphur infiltrated concrete- ferro cement- Fibre reinforced concrete- Rust eliminators and polymers coating for rebars during repair- foamed concrete- mortar and dry pack-vacuum concrete- Gunite and Shotcrete- Epoxy injection- Mortar repair for cracks-shoring and underpinning-Methods of corrosion protection-corrosion inhibitors-corrosion resistant steels-coating and cathodic protection.								
UNIT-4	REPAIRS, REHABILITATION AND RETROFITTING OF STRUCTURES				TOTAL HOURS	9 HOURS		
Repairs to overcome low member strength-Deflection-Cracking- Chemical disruption- weathering corrosion- wear-fire-leakage and marine exposure.								

UNIT-5	**DEMOLITION TECHNIQUES**	TOTAL HOURS	9 HOURS
Engineered demolition techniques for Dilapildated structures – case studies.			
TOTAL HOURS TO BE TAUGHT			45 HOURS
COURSE OUTCOMES:			
After undergoing the course, the students will have ability to

815CEE05	**VALUATION OF REAL PROPERTIES**	**3**	**0**	**0**	**2**	**50**	**50**	**100**
OBJECTIVES	At the end of this course the student shall be able to Analyse the valuation of residential, commercial and industrial buildings. The students will gain a comprehensive knowledge related to the investment of finance in real properties.							
UNIT-1	VALUE				TOTAL HOURS	9 HOURS		
General - Concept of the Terms Value & cost, Purposes of Valuation, Different Forms of Value- Capitalised value, Scrap value, Salvage value, Book value, Market value and Guideline value. Factors affecting the value of property - Mortgage - Role of the Valuer.								
UNIT-2	**METHODS OF VALUATION**				TOTAL HOURS	9 HOURS		
General - Methods of Valuation – Rental method, Direct comparison with the capital value, Valuation based on profits, Valuation based on cost, Developmental method of valuation and Depreciation method of valuation. Standard rent.								
UNIT-3	**DEPRECIATION**				TOTAL HOURS	9 HOURS		
Meaning of the Term depreciation, Physical Conditions, Functional Obsolescence, Economic Obsolescence, Methods of calculating depreciation - Straight line method, Constant percentage method, Sinking fund method and Quantity survey method. – Comparative analysis. Reproduction Cost and Replacement Cost. Cost Appreciation.								
UNIT-4	**PROJECT PROFITABILTY & METHODS OF PRICING**				TOTAL HOURS	9 HOURS		
Time value of money- Methods of appraising project profitability- Payback period, Net present value, ARR, IRR and Benefit cost ratio method -Aspects of appraisal – Pricing –concepts – Methods of Price determination – Full cost pricing, Pricing for a rate of return, Marginal cost, Acceptance cost, Going rate pricing and Customary pricing- Break even analysis.								

UNIT-5	**FINANCE FOR INVESTMENT IN REAL PROPERTIES**	TOTAL HOURS	9 HOURS
Money and Banking – Sources of finance -Terms of Borrowing – Loan for residential, Commercial and industrial properties – Rate of interest - Co-operative Housing Societies – Gearing and equity - Low-Geared High Geared – Acquisition of land – Transfer of property – Urban land Ceiling Act .			
TOTAL HOURS TO BE TAUGHT			**45 HOURS**
COURSE OUTCOMES:			
After undergoing the course, the students will have ability to			
CO.1	Know the basic concepts of finite element techniques		
CO.2	Analyse one dimensional and two dimensional problems..		
CO.3	Know about isoperimetric elements and its applications to field problems.

OBJECTIVES	To learn IRC loading conditions for design of bridges. To design different RCC bridges. To achieve knowledge about design of steel To study about prestressed concrete bridges. To know about bearing, joints and appurtenances in bridges							
UNIT-1	**INTRODUCTION**					TOTAL HOURS		9 HOURS
Definition-Components of a bridge-Classification-Importance of bridges-Standard specifications-Need for investigation-Selection of bridge site-Preliminary data to be collected-Preliminary drawing-Determination of design discharge –Linear waterway-Economical span-Location of piers and abutments-Vertical clearance above HFL-Subsoil exploration-Scour depth-Traffic projection-Investigation report-Choice of bridge type- Importance of proper investigation-Standard Specifications for Road Bridges.								
UNIT-2	**REINFORCED CONCRETE SLAB BRIDGES**					TOTAL HOURS		9 HOURS
Design of solid slab bridges for IRC loading - Design of kerb - Design of tee beam bridges - Design of panel and cantilever for IRC loading								
UNIT-3	**STEEL BRIDGES**					TOTAL HOURS		9 HOURS
Design of pratt type truss girder highway bridges - Design of top chord, bottom chord, web members - Effect of repeated loading - Design of plate girder railway bridges for railway loading - Wind effects - Design of web and flange plates - Vertical and horizontal stiffeners.								
UNIT-4	**PRESTRESSED CONCRETE BRIDGES**					TOTAL HOURS		9 HOURS
Design of prestressed concrete bridges - Preliminary dimensions - Flexural and torsional parameters - Courbon's theory - Distribution coefficient by exact analysis - Design of girder section - Maximum and minimum prestressing forces - Eccentricity - Live load and dead load shear forces - cable zone in girder –Check for stresses at various sections - Check for diagonal tension - Diaphragms - End block - Short term and long term deflections.								
UNIT-5	**BEARINGS, JOINTS AND APPURTENANCES**					TOTAL HOURS		9 HOURS
Importance of bearings-Bearing for slab bridges-Bearings for girder bridges-Expansion bearing-Fixed bearings-Elastomeric bearing-Elastomeric pot bearing-Bearing for skew bridges-Joints-Expansion joints-Handrails-Foot paths on bridges-Drainage arrangements-Wearing coat-River training works								

TOTAL HOURS TO BE TAUGHT		45 HOURS
COURSE OUTCOMES:		
After undergoing the course, the students will have ability to		
	CO1	Outline the basic design concept of bridges
	CO2	Design of Reinforced concrete girder bridges
	CO3	Design of steel bridges, girder and plates
	CO4	Design of Prestressed concrete bridges
	CO5	Know about bearings, joints and appurtenances in bridges

815CEP05	**PROJECT WORK**	0	0	20	10	50	50
OBJECTIVES	To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same. To train the students in preparing project reports and to face reviews and viva voce examination.						
	STRATEGY: The student works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction. The student will be evaluated based on the report and the viva voce examination by a team of examiners including one external examiner.						
COURSE OUTCOMES:							
After undergoing the course, the students will have ability to							
On Completion of the project work students will be in a position to take up any challenging practical problems and find solution by formulating proper methodology.
