118ENT01	TECHNICAL ENGLISH	L T P C 2 0 0 2

COURSE OBJECTIVES:

The Course prepares first semester Engineering and Technology students to:

- Develop strategies and skills to enhance their ability to read and comprehend engineering and technology texts.
- Foster their ability to write convincing job applications and effective reports.
- Develop their speaking skills to make technical presentations, participate in group discussions.
- Strengthen their listening skill which will help them comprehend lectures and talks in their areas of specialization.

UNIT I **09**

Listening - Ink talks and gap exercises - Speaking – Asking for and giving directions - Reading – short technical texts from journals and newspapers - Writing - definitions – instructions – checklists – recommendations - Vocabulary Development - technical vocabulary - Language Development – parts of speech – articles – word formation.

UNIT II **09**

Listening - longer technical talks - Speaking – process description - Reading – longer technical texts – Writing – graphical representation - Vocabulary Development - vocabulary used in formal letters/emails and reports - Language Development – tenses - voices - numerical adjectives – question tags.

UNIT III **09**

Listening - listening to classroom lectures - Speaking – introduction to technical presentations - Reading – longer texts both general and technical and practice in speed reading – Writing – process description using sequence words and sentences - Vocabulary Development - Misspelled words – one-word substitution - Language Development - embedded sentences – singular and plural nouns - compound nouns - editing

UNIT IV **09**

Listening - Listening to documentaries and making notes - Speaking – mechanics of presentations - Reading – reading comprehension – Writing - email etiquettes - job application – cover letter – Résumé preparation - essay writing - Vocabulary Development – synonyms and antonyms – paraphrasing - Language Development – modals – conditionals.

UNIT V **09**

Listening - TED talks - Speaking – brainstorming and debate – Reading – reading and understanding technical articles – Writing – reports - minutes of a meeting - Vocabulary Development- verbal analogies - phrasal verbs - Language Development - concord - reported speech.

TOTAL HOURS: 45 PERIODS

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOMES:

At the end of the course learners will be able to:

CO1: Read technical texts and write area- specific texts effortlessly.

CO2: Listen and comprehend lectures and talks in their area of specialization successfully.

CO3: Speak appropriately and effectively in varied formal and informal contexts.

CO4: Understand the basic grammatical structures and its applications.

CO5: Write reports and winning job applications.

TEXT BOOKS

1. Board of editors. Fluency in English A Course book for Engineering and Technology. Orient Blackswan, Hyderabad: 2016.
2. Sudharshana. N. P and Saveetha. C. English for Technical Communication. Cambridge University Press: New Delhi, 2016.
3. Uttham Kumar. N. Technical English I (with work book). Sahana Publications, Coimbatore, 2016.

REFERENCE BOOKS

1. Raman, Meenakshi and Sharma, Sangeetha- Technical Communication Principles and Practice. Oxford University Press: New Delhi,2014.
2. Kumar, Suresh. E. Engineering English. Orient Blackswan: Hyderabad,2015.
3. Booth-L. Diana, Project Work, Oxford University Press, Oxford: 2014.
4. Grussendorf, Marion, English for Presentations, Oxford University Press, Oxford: 2007
5. Means, L. Thomas and Elaine Langlois, English & Communication For Colleges. Cengage Learning, USA: 2007.

Students can be asked to read Tagore and Chetan Bhagat

Course Outcome		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
Co1	Read technical texts and write area- specific texts effortlessly.				2				1	1	3	1		1	1	
Co2	Listen and comprehend lectures and talks in their area of specialization successfully.				1	1				2	3	1		1		
Co3	Speak appropriately and effectively in varied formal and informal contexts.									2	3					
Co4	Understand the basic grammatical structures and its applications.										2					
Co5	Write reports and winning job applications.				2					1	2	1		1	1	1

118MAT02	ENGINEERING MATHEMATICS - I	L T P C 3 0 0 3

COURSE OBJECTIVES:

- To understand the eigenvalue problems.
- To understand the concepts of curvatures, evolutes and envelopes.
- To learn the total derivatives and apply the same to find maxima and minima.
- To solve differential equations of certain types, including systems of differential equations that they might encounter in engineering subjects.
- To solve certain linear differential equations using the Laplace transform technique which has applications in control theory and circuit theory.

UNIT I MATRICES 9

Eigenvalues and eigenvectors of a real symmetric matrix –Properties – Cayley - Hamilton theorem (Statement and applications only) – Orthogonal transformation of a symmetric matrix to diagonal form – Quadratic form –Reduction of quadratic form to canonical form by orthogonal transformation.

UNIT II DIFFERENTIAL CALCULUS 9

Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes – Evolutes as envelope of normals.

UNIT III FUNCTIONS OF SEVERAL VARIABLES 9

Partial derivatives – Euler's theorem for homogenous functions – Total derivatives – Jacobians – Taylor's expansion– Maxima and Minima – Method of Lagrangian multipliers.

UNIT IV ORDINARY DIFFERENTIAL EQUATIONS 9

Higher order linear differential equations with constant coefficients – Method of variation of parameters – Cauchy's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients-Applications to Engineering problems-Electric Circuits, Simple Harmonic Motions and bending of beams.

UNIT V LAPLACE TRANSFORM 9

Laplace transforms – Conditions for existence –Basic properties (Statement and applications only) – Laplace Transform of elementary functions, derivatives and integrals, unit step function and impulse functions, periodic functions. Definition of Inverse Laplace transform – Convolution theorem (Statement and applications only) – Initial and final value theorems (Statement and applications only) – Solution of linear ordinary differential equations of second order with constant coefficients using Laplace transform techniques.

TOTAL HOURS: 45 PERIODS

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOMES:

After completing this course, the student will be able to

CO1: Develop the knowledge of linear algebraic concepts.

CO2: Use the differential calculus tools application to seek solutions for many problems in engineering subjects.

CO3: Acquire the knowledge of partial differential concepts and apply to find maxima and minima of a function.

CO4: Determine the solutions of ordinary differential equations by various methods which have an application in their core subjects.

CO5: Apply Laplace transform techniques to solve ordinary differential equations which have an application in many engineering fields.

TEXT BOOKS

1. Erwin Kreyszig, "Advanced Engineering Mathematics", Wiley India, 10th edition New Delhi 2016.
2. Grewal. B.S, "Higher Engineering Mathematics", 44th Edition, Khanna Publications, Delhi, 2017.

REFERENCE BOOKS

1. T.Veerarajan, "Engineering Mathematics " Tata McGraw-Hill Publishing company, New Delhi, 2014.
2. Kandasamy.P, Thilagavathy,K., & Gunavathi.K., "Engineering Mathematics for first year "., S.Chand & Company Ltd., New Delhi,2014.
3. Ramana B.V., "Higher Engineering Mathematics", Tata McGraw Hill Co. Ltd., New Delhi, 11th Reprint, 2010.
4. Jain R.K. and Iyengar S.R.K., "Advanced Engineering Mathematics", Narosa Publications, New Delhi, 3rd Edition, 2007.
5. V.Prameelakaladharan and G.Balaji, "Engineering Mathematics - I", 3rd Edition, Amrutha marketing, Chennai, 2017.

Course Outcome		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
Co1	Develop the knowledge of linear algebraic concepts.	3	2											3		
Co2	Use the differential calculus tools application to seek solutions for many problems in engineering subjects.	3	3											3

Hosur - 635 109, Tamil Nadu.

118PHT03	ENGINEERING PHYSICS	L T P C 2 0 0 2

COURSE OBJECTIVES:

- To understand the concept of properties of matter.
- To understand the properties of sound and principles of quantization of energy.
- To understand the properties of coherent light and its importance.

UNIT-I PROPERTIES OF MATTER **9**

Elasticity – Stress – Strain diagram – Factors affecting elasticity – Twisting couple on a wire – Torsion pendulum – Young's modulus - cantilever – Uniform and Non uniform bending (theory and experiment)– Viscosity-Poiseuille's method for Coefficient of Viscosity (Qualitative).

UNIT-II ACOUSTICS AND ULTRASONICS **9**

Classification of sound, loudness, intensity – Decibel – Weber Fechner Law – Reverberation and Reverberation time – derivation of Sabine's formula for Reverberation time (Growth and Decay)– Absorption coefficient and its determination.

Introduction of Ultrasonics – Production – magnetostriction effect – magnetostriction generator – piezoelectric effect – piezoelectric generator – Detection of ultrasonic waves, properties – Cavitation – Applications – Depth of sea – Non Destructive Testing.

UNIT-III QUANTUM PHYSICS **9**

Black body radiation – Planck's theory (derivation) – Deduction of Wien's displacement law and Rayleigh–jeans' Law from Planck's theory – Compton Effect–derivation– Matter waves – Schrödinger's wave equation – Time independent and time dependent equations – Physical significance of wave function – Particle in a one dimensional box – Degeneracy and Non-degeneracy.

UNIT-IV LASER **9**

Introduction – Principle of Spontaneous emission and stimulated emission – Population inversion – pumping – Einstein's A and B coefficients – derivation – Types of lasers – He-Ne, CO_2, Nd-YAG, Semiconductor lasers – homojunction – Applications of Laser.

UNIT-V WAVE OPTICS & FIBRE OPTICS **9**

Interference – Air wedge (theory & experiment) – Polarization– Methods of polarizing light-Theory of plane circularly and elliptically polarized light.

Principle and propagation of light in optical fibers – Numerical aperture and Acceptance angle – Types of optical fibers (material, refractive index, and mode) – Fiber optical communication system (Block diagram) – Fiber optic sensors – Temperature & Displacement sensors (Qualitative).

TOTAL HOURS: 45 PERIODS

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ABHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOMES:

At the end of the course, the student will be able to

CO1: To understand properties of solids with different types of moduli and to gain knowledge about absorption coefficients of solids and different surfaces.
CO2: To understand basic concepts of high frequency sound waves and its applications.
CO3: To understand basic concepts of quantum mechanical behavior of wave and particle along with applications.
CO4: To understand the concepts of production of laser and its behavior with diffraction principle of interference.
CO5: To apply the concept of polarization phenomenon and thereby its applications in fiber optic communication.

TEXT BOOKS

1. R.K. Gaur and S.C. Gupta, 'Engineering Physics' Dhanpat Rai Publications, New Delhi, 2003.
2. Jayaprakash R.N, 'Engineering Physics - I', Dhanam Publications, Chennai, 2007.

REFERENCE BOOKS

1. R. Murugeshan , Kiruthiga Sivaprasath , "Modern Physics", S. Chand Publications, New Delhi, 2016.
2. A. Ghatak, "Optics", The McGraw-Hill Companies, Inc., 1221 Avenue of the Americas, New York, NY 10020.
3. Dr.M.N.Avadhanulu, "Introduction to Lasers: theory and applications", S.Chand publications 2012, New Delhi.

Course Outcome		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
Co1	To understand properties of solids with different types of moduli and to gain knowledge about absorption coefficients of solids and different surfaces.	3	2	1	3									3		1

118CYT04	ENGINEERING CHEMISTRY	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

- To make the students conversant with boiler feed water requirements, related problems and water treatment techniques.
- To recall the terminologies of electrochemistry and explain the function of batteries and fuel cells with its electrochemical reactions.
- To understand the fundamentals of corrosion, its types and polymers with its applications.
- Types of fuels, calorific value calculations, manufacture of solid, liquid and gaseous fuels.

UNIT I WATER AND ITS TREATMENT 9

Hardness of water - types - expression of hardness - units - estimation of hardness of water by EDTA - numerical problems -Alkalinity-types of alkalinity-determination of alkaninity-boiler troubles (scale and sludge) - treatment of boiler feed water - Internal treatment (carbonate, colloidal, phosphate and calgon conditioning) external treatment Ion exchange process, zeolite process - desalination of brackish water - Reverse Osmosis.

UNIT II ELECTROCHEMISTRY AND ENERGY STORAGE DEVICES 9

Electrochemical cell-single electrode potential-standard electrode potential-electrochemical series and its significance-EMF of a cell- Nernst equation -Electrodes-Reference electrodes-hydrogen, calomel, quinhydrone and glass electrodes. Determination of pH of a solution using a glass electrode. Batteries - primary and secondary cells, dry cell, alkaline, lead acid storage cell, Ni-Cd battery and lithium nano battery. Clean energy fuel cells - H_2-O_2 fuel cell.

UNIT III CORROSION SCIENCE 9

Corrosion: definition - types of corrosion: chemical and electrochemical corrosion – Pilling Bedworth ratio - types of oxide layer (stable, unstable, volatile, porous) - hydrogen evolution and oxygen absorption mechanism for electrochemical corrosion - mechanism for rusting of iron. Types of electrochemical corrosion: Galvanic corrosion - differential aeration corrosion (pitting, waterline and pipeline). Galvanic series - applications. Factors influencing corrosion: nature of metal and environment. Corrosion control methods: sacrificial anode method - impressed current Cathodic protection method - electroplating - electroless plating.

UNIT IV POLYMERS AND ITS PROCESSING 9

Monomers - polymers - polymerization - functionality – degree of polymerization - classification of polymers based on source and applications - Molecular weight determination. Types of polymerization: addition, condensation and copolymerization - mechanism of free radical polymerization. Preparation, properties and applications of PE, PVC, Teflon, terylene, Nylon and Bakelite. Rubber-drawbacks of natural rubber-Vulcanization-Compounding of plastics - injection and blow moulding methods.

UNIT V FUELS AND COMBUSTION 9

Fuels: Introduction - classification of fuels - coal - analysis of coal (proximate and ultimate) - carbonization - manufacture of metallurgical coke (Otto Hoffmann method) - petroleum - manufacture of synthetic petrol (Bergius process) - knocking - octane number - diesel oil - cetane number - natural gas - compressed natural gas (CNG) - liquefied petroleum gases (LPG) - power alcohol and biodiesel. **Combustion of fuels:** Introduction - calorific value - higher and lower calorific values- theoretical calculation of calorific value - ignition temperature - spontaneous ignition temperature - explosive range - flue gas analysis (ORSAT Method).

TOTAL HOURS: 45 PERIODS

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOMES

CO1: Attribute the internal and external treatment methods for the removal of hardness in water for domestic and industrial applications.

CO2: Construct an electrochemical cell and Identify the components and processes in batteries and infer the selection criteria for commercial battery systems with respect to different applications.

CO3: Utilize electrochemical data to formulate an electrochemical half-cell and cell reactions for corrosion control processes.

CO4: Differentiate the polymers used in day to day life based on its source, properties and applications.

CO5: Analyse the three types of fuels based on calorific value for selected application.

118EGT05	ENGINEERING GRAPHICS	L	T	P	C
		2	0	4	4

COURSE OBJECTIVES:

- To understand the graphical skills for drawing the object and the principle of free-hand sketching techniques.
- To understand the principle of orthographic projection of points, lines and plane surfaces.
- To study the principle of simple solids.
- To understand the principle of section and development of solids.
- To understand the principle of Isometric and Perspective projections.

Concepts and conventions (Not for Examination)

Importance of graphics in engineering applications – Use of drafting instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning.

UNIT I PLANE CURVES AND FREE HAND SKETCHING 12

Curves used in engineering practices:

Conics – Construction of ellipse, Parabola and hyperbola by Eccentricity method – Construction of cycloid – Construction of involutes of square and circle – Drawing of tangents and normal to the above curves.

Free hand sketching:

Representation of Three Dimensional objects – General principles of orthographic projection – Need for importance of multiple views and their placement – First angle projection – layout views – Developing visualization skills through free hand sketching of multiple views from pictorial views of objects.

UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACES 12

Projection of points and straight lines located in the first quadrant – Determination of true lengths and true inclinations – Projection of polygonal surface and circular lamina inclined to both reference planes.

UNIT III PROJECTION OF SOLIDS 12

Projection of simple solids like prisms, pyramids, cylinders and cones when the axis is inclined to one reference plane by change of position method.

UNIT IV SECTION OF SOLIDS AND DEVELOPMENT OF SURFACES 12

Sectioning of simple solids like prisms, pyramids, cylinders and cones in simple vertical position by cutting planes inclined to one reference plane and perpendicular to the other – Obtaining true shape of section.

Development of lateral surfaces of simple and truncated solids – Prisms, pyramids, cylinders and cones – Development of lateral surfaces of solids with cylindrical cutouts, perpendicular to the axis.

UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS 12

Principles of isometric projection – isometric scale – isometric projections of simple solids, truncated prisms, pyramids, cylinders and cones.

Perspective projection of prisms, pyramids and cylinders by visual ray method.

TOTAL HOURS: 60 PERIODS

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOMES

The student will be able to

CO1: Recognize the conventions and apply dimensioning concepts while drafting simple objects.
CO2: Draw the orthographic projection of points, line, and plane surfaces.
CO3: Draw the orthographic projection of simple solids.
CO4: Draw the section of solid drawings and development of surfaces of the given objects.
CO5: Apply the concepts of isometric and perspective projection in engineering practice.

TEXT BOOKS

1. Ranganath G, Channankaiah and Halesh Koti, "Engineering Graphics", Second Edition, Sahana Publishers, 2015.
2. Bhatt. N.D., "Engineering Drawing" Charotar Publishing House, 53th Edition, 2014.

REFERENCE BOOKS

1. Dhananjay A.Jolhe, "Engineering Drawing with an introduction to AutoCAD" Tata McGraw Hill Publishing Company Limited, 2017.
2. Gopalakrishnana. K. R, "Engineering Drawing" (Vol. I & II), Subhas Publications, 2014.

118ESE02	BASIC CIVIL, ELECTRICAL, AND ELECTRONICS ENGINEERING	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To gain knowledge about Civil Engineering Materials.
2. To learn about Structural Components of Building.
3. To learn the basics of electrical elements.
4. To introduce the fundamental concepts of DC and AC circuits.
5. To interpret the principle and characteristics of semiconductor devices.

PART-A (CIVIL)

UNIT-I CIVIL ENGINEERING MATERIALS 9

Civil Engineering Materials: Bricks, Stones, Sand, Cement, Concrete & Steel sections.
M-Sand and their types, Admixtures-Fibers and Fabrics, Superplasticizers - Selection of Materials.

UNIT - II COMPONENTS OF BUILDING 9

Component parts of the Building -Substructure (Foundation) Types, Bearing capacity, Requirement of Good Foundations.
Superstructure: Brick Masonry, Stone Masonry, Lintels, Roofing, Flooring, Plastering
Typical cross-section showing the Buildings in a Structure, Standard Legends and Insignia

PART-B (ELECTRICAL & ELECTRONICS)

UNIT – III INTRODUCTION TO BASIC ELECTRICAL ELEMENTS 9

Electrical circuit : passive elements - Resistor, Inductor and Capacitor; active elements- Current, Voltage, Power and Energy – Ohm's Law and limitations - Kirchhoff's Laws – relationship between current, voltage and power – Resistors in series, parallel and series -parallel circuits

UNIT - IV FUNDAMENTALS OF DC AND AC CIRCUITS 9

DC Circuits: Sources of Electrical Energy - Independent and Dependent Source, Source Conversion - Star –Delta conversion- Mesh and Nodal Analysis.
AC Circuits: Generation of sinusoidal - voltage, average - RMS value, form factor and peak factor- Phasor diagrams of R, L, C, combination of R-L, R-C and R-L-C circuits

UNIT–V SEMICONDUCTOR DEVICES AND SWITCHING THEORY 9

Semiconductor Devices - Overview of Semiconductors - basic principle, operation and characteristics of PN diode, zener diode, BJT, JFET -Number systems – binary codes - logic gates - Boolean algebra, laws & theorems - simplification of Boolean expression - implementation of Boolean expressions using logic gates.

TOTAL HOURS: 45 PERIODS

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOMES

Upon Completion of this course, students will be able to:

CO1: Know the usage of surveying and properties of construction materials.
CO2: Understand the stress strain of various building and material such as substructure, road transport and bridge.
CO3: Recognize the different combinations of circuit elements and solving the circuit by applying basic circuital laws.
CO4: Acquire a good understanding of DC and AC circuits.
CO5: Demonstrate the characteristics of semiconductor devices.

118CYP07	ENGINEERING CHEMISTRY LABORATORY	L	T	P	C
		0	0	2	1

COURSE OBJECTIVE:

- Students will be conversant with the estimation of various compounds using volumetric and instrumental analysis.

LIST OF EXPERIMENTS

1. Estimation of Total hardness by EDTA
2. Determination of percentage of calcium in Lime Stone by EDTA
3. Estimation of chloride in water sample
4. Estimation of alkalinity of Water sample
5. Determination of DO in Water (Winkler's Method)
6. Determination of Rate of Corrosion of the given steel specimen by weight loss method (Without inhibitor)
7. Determination of Rate of Corrosion of the given steel specimen by weight loss method (With inhibitor)
8. Conduct metric titration (Simple acid base)
9. Conduct metric titration (Mixture of weak and strong acids)
10. Conduct metric titration using $BaCl_2$vs Na_2SO_4
11. Potentiometric Titration (Fe^{2+} / $KMnO_4$ or $K_2Cr_2O_7$)
12. PH titration (acid & base)
13. Determination of water of crystallization of a crystalline salt -Copper sulphate
14. Preparation of Bio-Diesel by Trans etherification method.

A minimum of TEN experiments shall be offered.

TOTAL HOURS: 45 PERIODS

COURSE OUTCOMES:

CO1: Carry out the volumetric experiments and improve the analytical skills.
CO2: Understand the maintenance and usage of analytical instruments and thereby develop their skills in the field of engineering.
CO3: Understand the principle and handling of electrochemical instruments and Spectrophotometer
CO4: Apply their knowledge for protection of different metals from corrosion by using different inhibitors

REFERENCE BOOKS:

1. Arthur I. Vogel's, "Quantitative Inorganic Analysis including Elementary Instrumental Analysis", ELBS, Group, 7th Edition, 2000.
2. Dr. K .Sivakumar, "Engineering Chemistry lab manual", S.S publishers, 2016.

118EPP07	ENGINEERING PRACTICE LABORATORY	L	T	P	C
		0	0	2	1

COURSE OBJECTIVES:

1. To get the knowledge on welding techniques and its types.
2. To do the fitting operation on a given material. (Specimen)
3. To carry out sheet metal operation.
4. To know the principle involved in plumbing work.
5. To do the carpentry work on a given work piece.

LIST OF EXPERIMENTS

WELDING:

Study of Electric Arc welding and Gas welding tools and equipment's.

Preparation of Arc welding and Gas welding models:

i) Butt joint ii) Lap joint iii) T - joint.

FITTING:

Study of fitting tools and operations.

Preparation of fitting models: i) V-fitting ii) Square fitting

SHEET METAL WORK:

Study of sheet metal tools and operations

Preparation of sheet metal models: i) Rectangular Tray ii) Funnel

PLUMBING WORKS:

Study of pipeline joints and house hold fittings.

Preparation of plumbing models: Basic pipe connections with PVC and GI pipe fittings.

CARPENTRY:

Study of wooden joints and tools used in roofs, doors, windows, furniture.

Preparation of carpentry models:

i) Lap joint ii) Dovetail joint iii) T-Joint

DEMONSTRATION ON:

ELECTRICAL ENGINEERING PRACTICE

Study of Electrical components and equipments

Residential house wiring using switches, fuse, indicator, lamp and energy meter.

ELECTRONICS ENGINEERING PRACTICE

Study of Electronic components –Resistor, color coding, capacitors etc

Soldering practice –components soldering in simple electric circuit & testing continuity

COMPUTER HARDWARE AND SOFTWARE PRACTICE

Study of PC Hardware, Internet & World Wide Web and Productivity tools including Word, Excel, Power Point and Publisher.

TOTAL HOURS: 45 PERIODS

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOMES

The students will be able to

CO1: Prepare simple Lap, Butt and T- joints using arc welding equipments.
CO2: Prepare the rectangular trays and funnels by conducting sheet metal operation.
CO3: Prepare the pipe connections and identify the various components used in plumbing.
CO4: Prepare simple wooden joints using wood working tools.
CO5: Demonstrate basic electrical, electronic and computer components based on their physical parameters and dimensions.

218ENT01	COMMUNICATIVE ENGLISH	L T P C 2 0 2 3

COURSE OBJECTIVES:

The Course prepares first semester Engineering and Technology students:

- To help learners develop their listening skills which will enable them listen to lectures and comprehend them by asking questions; seeking clarifications.
- To help learners develop their speaking skills and speak fluently in real contexts.
- To develop the basic reading and writing skills of first year engineering and technology students.
- To help learners develop grammar and vocabulary of a general kind by developing their reading skills

UNIT I **09**

Listening - conversation - Speaking – introducing oneself - exchanging personal information - Reading – comprehension - Writing - paragraph - Vocabulary Development - synonyms and antonyms - Language Development – consonants & vowels - phonetic transcription.

UNIT II **09**

Listening - telephonic conversation - Speaking – sharing information of a personal kind – greeting - taking leave - Reading – short stories – The Gift of the Magi, A Service of Love and The Last Leaf by O. Henry – Writing – developing hints - Vocabulary Development – everyday vocabulary - Language Development – British and American English - infinitive and gerund.

UNIT III **09**

Listening – class memory quiz - Speaking – impromptu - Reading – magazines – Writing – agenda - proposals - Vocabulary Development - important words used in speaking and writing - Language Development – types of sentences - information and emphasis.

UNIT IV **09**

Listening – interviews of famous persons - Speaking – story narration - Reading – case study – Writing – invitation letter - quotation letter - Vocabulary Development – listening and reading vocabulary - Language Development – cause and effect – purpose and function.

UNIT V **09**

Listening - a scene from a film - Speaking - role play - Reading – jigsaw – Writing – essay writing - Vocabulary Development- business vocabulary - Language Development - degrees of comparison – real English phrases.

TOTAL HOURS: 45 PERIODS

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOMES

At the end of the course learners will be able to:

CO1: Comprehend conversations and talks delivered in English.
CO2: Participate effectively in formal and informal conversations; introduce themselves and their friends and express opinions in English.
CO3: Read short stories, magazines, novels and other printed texts of a general kind.
CO4: Write short paragraphs, essays, letters and develop hints in English.
CO5: Write reports and winning job applications.

TEXT BOOKS

1. Board of Editors. Using English A Coursebook for Undergarduate Engineers and Technologists. Orient BlackSwan Limited, Hyderabad: 2015.
2. Richards, C. Jack. Interchange Students' Book-2, New Delhi: CUP, 2015.
3. Uttham Kumar, N. Communicative English (with work book). Sahana Publications, Coimbatore, 2019.

REFERENCE BOOKS

1. Bailey, Stephen. Academic Writing: A Practical Guide for Students. New York: Rutledge, 2011.
2. Comfort, Jeremy, et al. Speaking Effectively: Developing Speaking Skills for Business English. Cambridge University Press, Cambridge: Reprint 2011.
3. Dutt P. Kiranmai and Rajeevan Geeta. Basic Communication Skills, Foundation Books: 2013.
4. Means, L. Thomas and Elaine Langlois. English & Communication for Colleges. Cengage Learning, USA: 2007.
5. Redston, Chris & Gillies Cunningham. Face2Face (Pre-intermediate Student's Book & Workbook). Cambridge University Press, New Delhi: 2005.

Course Outcome		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
Co1	Comprehend conversations and talks delivered in English.				1					2	3	1		1		
Co2	Participate effectively in formal and informal conversations; introduce themselves and their friends and express opinions in English.									1	3	1				
Co3	Read short stories, magazines, novels and other printed texts of a general kind.									1	1	1				
Co4	Write short paragraphs, essays, letters and develop hints in English.									1	3					1
Co5	Write reports and winning job applications.			3					2				1

218MAT02	ENGINEERING MATHEMATICS-II	L	T	P	C
		3	1	0	4

COURSE OBJECTIVES:

- To revise the concept of integral calculus and introduce Beta and Gamma functions.
- To understand double and triple integration concepts.
- To study vector calculus comprising of surface and volume integrals along with the classical theorems involving them.
- To learn analytic functions and their properties and also conformal mappings with few standard examples those have direct applications.
- To grasp the basics of complex integration and application to contour integration which is important for evaluation of certain integrals encountered in engineering problems.

UNIT-I INTEGRAL CALCULUS **12**

Definite and indefinite integrals - Substitution rule – Techniques of integration –Integration by parts – Trignometric integrals - Trigonometric substitutions - Integration of rational functions by partial fractions – Integration irrational functions - Beta and Gamma functions.

UNIT-II MULTIPLE INTEGRALS **12**

Double integration – Cartesian and polar co-ordinates – Change of order of integration – Change of variables between Cartesian and polar coordinates –Triple integration in Cartesian co-ordinates – Area as double integral – Volume as triple integral.

UNIT-III VECTOR CALCULUS **12**

Gradient, Divergence and Curl – Directional derivative – Irrotational and solenoidal, vector fields – Vector integration – Green's theorem in a plane, Gauss divergence theorem and Stokes' theorem (Statement and applications only) – Simple applications involving cubes and rectangular parallelopipeds.

UNIT-IV ANALYTIC FUNCTIONS **12**

Functions of a complex variable – Analytic functions – Necessary conditions, Cauchy– Riemann equation and Sufficient conditions (Statement and applications only) – Harmonic and orthogonal properties of analytic function (Statement and applications only) – Harmonic conjugate – Construction of analytic functions – Conformal mapping: w= z+c, cz, 1/z, and bilinear transformation.

UNIT-V COMPLEX INTEGRATION **12**

Complex integration – Statement and applications of Cauchy's integral theorem and Cauchy's integral formula – Taylor and Laurent expansions – Singular points –Residues – Residue theorem – Application of residue theorem to evaluate real integrals – Unit circle and semi-circular contour (excluding poles on boundaries).

TOTAL HOURS: 60 PERIODS

COURSE OUTCOMES:

At the end of the course the student will be able to

CO1: Apply the basic integration concepts and solve problems.
CO2: Determine the area and volume in 2-dimension and 3-dimension respectively using multiple integrals.
CO3: Expertise the concept of vector calculus and apply in core subjects.
CO4: Construct the analytic functions and conformal transformations of complex functions.
CO5: Evaluate the integrals using complex integration.

218GET03	ENVIRONMENTAL SCIENCE AND ENGINEERING	L T P C 2 0 0 2

COURSE OBJECTIVES:

- To study the nature and facts about environment.
- To finding and implementing scientific, technological, economic and political solutions to environmental problems.
- To study the interrelationship between living organism and environment.
- To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- To study the dynamic processes and understand the features of the earth's interior and surface.

UNIT I NATURAL RESOURCES 9

Definition, scope and importance of environment – need for public awareness - Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over- utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles. Field study of local area to document environmental assets – river / forest / grassland / hill / mountain.

UNIT II ECOSYSTEMSAND BIODIVERSITY 9

Concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers –energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ conservation of biodiversity. Field study of common plants, insects, birds; Field study of simple ecosystems – pond, river, hill slopes.

UNIT III ENVIRONMENTAL POLLUTION 9

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – solid waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides. Field study of local polluted site – Urban / Rural / Industrial / Agricultural.

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT 9

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of non-governmental organization environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. – wasteland reclamation – consumerism and waste products – environment production act – Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT 9

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

TOTAL HOURS: 45 PERIODS

COURSE OUTCOMES

CO1: Environmental Pollution or problems cannot be solved by mere laws. Public participation is an important aspect which serves the environmental Protection. One will obtain knowledge on the following after completing the course.

CO2: Public awareness of environmental is at infant stage.

CO3: Ignorance and incomplete knowledge has led to misconceptions

CO4: Development and improvement in std. of living has led to serious environmental disasters

TEXTBOOKS

1. Benny Joseph, Environmental Science and Engineering ', Tata McGraw-Hill, New Delhi, 2006.
2. Gilbert M. Masters, Introduction to Environmental Engineering and Science ', 2nd edition, Pearson Education, 2004.
3. Dr. G. Ranganath, Environmental Science and Engineering, Sahana Publishers, 2018 edition.

REFERENCE BOOK

Hosur - 635 109, Tamil Nadu.

218EMT04	ENGINEERING MECHANICS	L T P C 3 0 0 3

COURSE OBJECTIVES:

- To understand the vectorial and scalar representation of forces and moments.
- To understand the static equilibrium of particles and rigid bodies both in two dimensions.
- To understand the concepts of centroids and moment of inertia of composite sections.
- To understand the principle of work and energy.
- To enable the students to comprehend the effect of friction on equilibrium.

UNIT I BASICS & STATICS OF PARTICLES **12**

Introduction-Units and Dimensions-Laws of mechanics - Lame's theorem, Parallelogram and Triangular law of forces, Polygon force, Resolution and Composition of forces, Equilibrium of a particle-Forces in space - Equilibrium of a particle in space-Equivalent systems of forces-Principle of transmissibility-Single equivalent force.

UNIT II EQUILIBRIUM OF RIGID BODIES **12**

Free body diagram-Types of supports and their reactions-Requirements of stable equilibrium-Moments and Couples, Moment of a force about a point and about an axis-Vectorial representation of couples-Varignon's theorem-Equilibrium of Rigid bodies in two dimensions- Equilibrium of Rigid bodies in three dimensions – Examples.

UNIT III PROPERTIES OF SURFACES AND SOLIDS **12**

Determination of Areas and Volumes-First moment of area and the centroid of sections - rectangle, circle, triangle from integration - T section, I section, Angle section, Hollow section by using standard formula, Second and product moments of plane area - Rectangle, triangle, circle from integration-T section, I section, Angle section, Hollow section by using standard formula, Parallel axis theorem and perpendicular axis theorem.

UNIT IV DYNAMICS OF PARTICLES **12**

Displacement, Velocity and Acceleration, their relationship, Relative motion- Rectilinear motion-Curvilinear motion, Newton's law-Work Energy Equation of particles-Impulse and Momentum-Impact of elastic bodies.

UNIT V FRICTION **12**

Frictional force - Laws of Coloumb friction - Simple contact friction - Rolling resistance - Belt friction - Ladder friction - wedge friction.

TOTAL HOURS: 60 PERIODS

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOMES

The students will be able to

CO1: Explain the differential principle applies to solve engineering problems dealing with force, displacement, velocity and acceleration.

CO2: Find solution for problems related to equilibrium of particles.

CO3: Solve the Moment of inertia for different 2-D plane figures.

CO4: Analyze the forces in any structures.

CO5: Solve rigid body subjected to frictional forces.

218PPT05	PROBLEM SOLVING AND PYTHON PROGRAMMING	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES:

1. To know the basics of algorithmic problem solving
2. To read and write simple Python programs.
3. To develop Python programs with conditionals and loops.
4. To define Python functions and call them.
5. To use Python data structures — lists, tuples, dictionaries.
6. To do input/output with files in Python.

UNIT I ALGORITHMIC PROBLEM SOLVING 9

Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

UNIT II DATA, EXPRESSIONS, STATEMENTS 9

Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT III CONTROL FLOW, FUNCTIONS 9

Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.

UNIT IV LISTS, TUPLES, DICTIONARIES 9

Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, merge sort, histogram.

UNIT V FILES, MODULES, PACKAGES 9

Files and exception: text files, reading and writing files, format operator; command line arguments, date and time, errors and exceptions, handling exceptions, debugging, modules, packages; Illustrative programs: word count, copy file.

TOTAL HOURS: 45 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to

CO1: Develop algorithmic solutions to simple computational problems
CO2: Read, write, execute by hand simple Python programs.
CO3: Structure simple Python programs for solving problems.
CO4: Decompose a Python program into functions.
CO5: Represent compound data using Python lists, tuples, dictionaries.

218BSE01	MATERIAL SCIENCE	L	T	P	C
		2	0	0	2

COURSE OBJECTIVES:

- To study the basic theory of structure of crystalline materials.
- To understand the essential principles of electrical properties of materials.
- To get the better knowledge of Physics of semiconductor materials.
- Become proficient in dielectric and nano materials.
- To understand the essential concepts of modern engineering materials.

UNIT I CRYSTAL PHYSICS 9

Introduction and structure of atoms – Crystal structure: The space lattice and Unit Cell - Crystal Systems and Bravais lattice – Calculation of number of atoms per unit cell – Atomic radius – Coordination number – Packing factor for SC, BCC, FCC, HCP and Diamond cubic structure – NaCl, ZnS structures (qualitative).

UNIT II CONDUCTING MATERIALS 9

Conductors - Classical free electron theory of metals - Expression for electrical conductivity - Expression for Thermal conductivity - Wiedemann-Franz law - Lorentz number - Draw backs of classical theory - Quantum theory - Fermi distribution function - Effect of temperature on Fermi distribution function - Density of energy states - carrier concentration in metals.

UNIT III SEMICONDUCTING MATERIALS 9

Intrinsic Semiconductors - direct and indirect band gap semiconductors - Carrier concentration in intrinsic semiconductors - Fermi level - Variation of Fermi level with temperature – Electrical conductivity of intrinsic semiconductors – band gap determination - Extrinsic semiconductors - Carrier concentration in N-type & P-type semiconductors (qualitative) - Variation of carrier concentration with temperature – variation of Fermi level with temperature and impurity concentration - Electrical conductivity of extrinsic semiconductors.

UNIT IV DIELECTRIC MATERIALS AND NANOMATERIALS 9

Dielectric materials: Dielectric constant – Dielectric loss - Electrical susceptibility- Electronic, ionic – orientational and space charge polarization – Frequency and temperature dependence of polarization – internal field – Claussius – Mosotti relation (derivation)

Nano materials: Synthesis-Plasma arcing- – Chemical vapour deposition – Electro deposition – Ball Milling – Properties of nanoparticles and their applications.

UNIT V NUCLEAR PHYSICS AND HEAT TRANSMISSION 9

Nuclear fission-Nuclear fusion-nuclear reactors-classification-general features-efficiency-coolants moderators thermal reactors.

Heat conduction-Expression for thermal conductivity-Amount of heat flow through a plane wall in one direction-Determine the thermal conductivity –Lee's disc method for bad conductors.

TOTAL HOURS: 45 PERIODS

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOMES

At the end of the course, the students will able to

CO1: Have the necessary understanding on the functioning of crystalline in solids of materials
CO2: Gain knowledge on classical and quantum electron theories, and energy band structures.
CO3: Acquire knowledge on basics of semiconductor physics and its applications in various devices.
CO4: Get knowledge on dielectric and nano materials and their applications.
CO5: Understand the basics of modern engineering materials.

218PHP07 **ENGINEERING PHYSICS LABORATORY**

L	T	P	C
0	0	2	1

COURSE OBJECTIVES:

- To understand the practical concepts of Interference and diffraction.
- To understand the concept of velocities of sound in different liquids.
- To get better knowledge of modulus of elasticity.
- To understand the concepts of thermal conductivity.
- To understand the concepts of viscosities of liquid

LIST OF EXPERIMENTS

1. (a) Determination of laser parameters – Wavelength.
   (b) Particle size determination using Diode Laser.
2. Determination of thickness of a thin wire-Air wedge method.
3. Determination of velocity of sound and compressibility of liquid- Ultrasonic interferometer.
4. Determination of wavelength of mercury spectrum-Spectrometer grating.
5. Determination of thermal conductivity of a bad conductor-Lee's disc method.
6. Determination of Young's modulus of the material –Non uniform bending.
7. Determination of viscosity of liquid – Poiseuille's method.
8. Spectrometer- Dispersive power of prism.
9. Determination of Young's modulus of the material - Uniform bending.
10. Tensional pendulum- Determination of Rigidity modulus.

TOTAL HOURS: 45 PERIODS

COURSE OUTCOMES

At the end of the course, the student will be able to

CO1: Understanding the moduli of elasticity by determining Young's modulus and Rigidity modulus of a beam and cylinder respectively.

CO2: Understanding the phenomenon of diffraction, dispersion and interference of light using optical component

CO3: Acquiring knowledge of viscosity by determining coefficient of viscosity of a liquid and measuring the parameters of ultrasound propagating through a liquid

CO4: Understanding the phenomenon of heat transfer through conductors and bad conductors by determining thermal conductivity.

Course Outcome		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
Co1	Understanding the moduli of elasticity by determining Young's modulus and Rigidity modulus of a beam and cylinder respectively.	3	3	3	3	3								3		3

218PPP08	PROBLEM SOLVING AND PYTHON PROGRAMMING LABORATORY	L T P C 0 0 2 1

COURSE OBJECTIVES:

- To write, test, and debug simple Python programs.
- To implement Python programs with conditionals and loops.
- Use functions for structuring Python programs.
- Represent compound data using Python lists, tuples, dictionaries.
- Read and write data from/to files in Python.

LIST OF PROGRAMS

1. To Implement python scripts using Variables and operators
2. To Demonstrate Operator precedence to evaluate an expression
3. Display grade of a student using elif statement
4. Implement Floyd triangle using for loop
5. Checks the given number is prime or not using while loop
6. Compute the GCD of Numbers using functions
7. Finding factorial of a given number using recursive function.
8. Takes a list of words and returns the length of longest one using strings
9. To perform linear and binary search using strings
10. To implement list as arrays (multiply 2 matrices)

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux

TOTAL HOURS: 45 PERIODS

COURSE OUTCOMES

Upon completion of the course, students will be able to:

CO1: Write, test, and debug simple Python programs.

CO2: Implement Python programs with conditionals and loops.

CO3: Develop Python programs step-wise by defining functions and calling them.

CO4: Use Python lists, tuples, dictionaries for representing compound data.

CO5: Read and write data from/to files in Python.

Course Outcome		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
Co1	Write, test, and debug simple Python programs.	3	3	3

Hosur - 635 109, Tamil Nadu.

318MAT01	ENGINEERING MATHEMATICS – III	L	T	P	C
		3	1	0	4

Course Objective(s):

a) To learn various methods to solve the partial differential equations.
b) To introduce Fourier series analysis which plays a vital role in many applications in engineering.
c) To understand the boundary value problems and to obtain the solution using partial differential equations.
d) To acquaint the student with Fourier transform techniques used in wide variety of situations.
e) To develop z-transform techniques which analyze the discrete time signals.

UNIT-I PARTIAL DIFFERENTIAL EQUATIONS 9+3

Solutions of first order partial differential Equations-Standard types-Singular solutions-Lagrange's Linear equation- Method of grouping and Method of multipliers-Solution of homogeneous and non-homogenous linear equations of second and higher order with constant coefficients.

UNIT-II FOURIER SERIES 9+3

Dirichlet's conditions – General Fourier series – Change of scale - Odd and even functions – Half-range Sine and Cosine series – Parseval's identity applications – Harmonic Analysis.

UNIT-III BOUNDARY VALUE PROBLEMS 9+3

Classification of Partial Differential Equations – Method of separation of Variables – Solutions of one dimensional wave equations and One-dimensional heat equations –Applications using Fourier series solutions in Cartesian coordinates - Steady state solution of two-dimensional heat equation.

UNIT-IV FOURIER TRANSFORM 9+3

Representation of Graphs –BreadthFirst Traversal- Depth First Traversal **-Bi-connectivity – Cut vertex – Euler circuits**– Topological Sorting– Application of Graphs - Shortest Path Algorithm: Floyd Warshall - Bellman Ford - Dijkstra'sAlgorithm -Minimum Spanning Trees: Prim's Algorithm - Kruskal's Algorithm.

UNIT-V Z – TRANSFORM 9+3

Z-Transform - Elementary properties and applications – Initial and final value theorems (Statement and applications only) - Inverse Z-Transform – Partial fractions method, Residue theorem method and Convolution theorem (statement and applications only) - Solution of difference equations by applying Z-transforms.

.L: 45 + T: 15 TOTAL:60 Periods

COURSE OUTCOMES:

At the end of the course the students will be able to

CO 1: Know the methods to solve partial differential equations occurring in variousphysical andengineering problems.

CO 2: Describe an oscillating function which appear in a variety of physical problems by Fourier series helps them to understand its basic nature deeply.

CO 3: Acquire the knowledge to construct partial differential equations with initial and boundary conditions for various physical and engineering real time problems and obtaining solution using Fourier series methods.

CO 4: Understand the effect of Fourier transform techniques and their applications.

CO 5: Gain the concept of analysis of linear discrete system using Z-transform approach.

318AET02	Thermodynamics in Aero Engineering	L T P C 3 0 0 3

COURSE OBJECTIVES

This course is designed

a) To give a brief background of various laws of thermodynamics and its application in heat transfer, refrigeration and air-conditioning, jet propulsion system.
b) To study the Basics of thermodynamic cycles.
c) To study the basics of one dimensional flow and to understand the working principle of rocket motor and nozzle.
d) To study thermodynamic principles, thermodynamics of state, basic thermodynamic relations,
Properties of pure substances
e) To understand the basics of refrigeration and air compressors.

UNIT I BASIC THERMODYNAMICS **9 Periods**

Basic Thermodynamic Systems, Zeroth Law, First Law - Heat and work transfer in flow, Second law, Clausius statement - concept of enthalpy, entropy change in non-flow processes.

UNIT II AIR CYCLES **9 Periods**

Otto, Diesel, Dual and Brayton combustion cycles – Air standard efficiency - Mean effective pressure – Actual and theoretical PV diagrams of two stroke and four stroke IC Engines.

UNIT III THERMODYNAMICS OF ONE DIMENSIONAL FLUID FLOW **9 Periods**

Application of continuity, momentum and energy equations- Rankine cycle - Isentropic flow of ideal gases through nozzles - Simple jet propulsion system - Thrust rocket motor – Specific impulse.

UNIT IV REFRIGERATION AND AIR CONDITIONING **9 Periods**

Principles of refrigeration, Air conditioning - Heat pumps - Vapor compression - Vapour absorption types - Coefficient of performance, Properties of refrigerants.

UNIT V AIR COMPRESSORS **9 Periods**

Classification and working principle of compressors (Descriptive Treatment). Isothermal and Isentropic efficiency of air compressors.

Total: 45 Periods

COURSE OUTCOMES

Upon completion of this course, students will be able to

a) Understand the basics of laws of thermodynamics and its principles.
b) Analyze the air cycles and its problems, to solve the basic relations related to air cycles.
c) Understand the basics of one dimensional flow
d) Understand the basics of refrigeration
e) Understand the basics of air compressors

318AET03	Fluid Mechanics and Machinery	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

This course is designed

a) To study the basics of units and dimensions and properties of fluids.
b) To learn the fundamentals of fluid statics and fluid flow
c) To understand the importance of dimensional analysis and Buckingham's Pi Theorem and the applications of dimensionless parameters.
d) To know the types of turbine and to understand the velocity triangles
e) To understand the importance of various types of flow in pumps and turbines

UNIT I INTRODUCTION **9 Periods**

Units and Dimensions, Properties of fluids, vapour pressure and gas laws –capillarity and surface tension. Flow characteristics: concepts of system and control volume. Application of control volume to continuity equation, energy equation, momentum equation and moment of momentum equation.

UNIT II FLOW THROUG CIRCULAR CONDUITS **9 Periods**

Laminar flow though circular conduits and circular annuli. Boundary layer concepts. Boundary layer thickness. Hydraulic and energy gradient. Darcy –Weisbach equation. Friction factor and Moody diagram. Flow though pipes in series and in parallel. Minor losses

UNIT III DIMENSIONAL ANALYSIS **9 Periods**

Buckingham's Π theorem. Dimensionless parameters. Models and similitude. Applications of dimensionless parameters to the various flow problems.

UNIT IV ROTO DYNAMIC MACHINES **9 Periods**

Elementary cascade theory, Theory of turbo machines, Euler's equation, classification of turbines – Heads and efficiencies-velocity triangles. Pelton wheel turbine, Francis turbine and Kaplan turbine-working principles, centrifugal pump, specific speed-unit quantities- performance curves for pumps and turbines.

UNIT V POSITIVE DISPLACEMENT PUMPS **9 Periods**

Classification of positive displacement pumps-Reciprocating pumps, Indicator diagrams, Work saved by air vessels. Rotary pumps-Working principle and performance curves.

Total : 45 Periods

COURSE OUTCOMES:

Upon completion of this course, students will be able to

a) Acquire the knowledge regarding properties of fluids.
b) Obtained knowledge on Boundary layer concept, fluid statics, kinematics, and dynamic and the different types of flow.
b) Apply the Knowledge about the importance of dimensional analysis and Buckingham's Pi Theorem in Fluid Flow analysis
c) Students can able to understand the concepts of working of turbines with performance.
d) Students can able to understand the concepts of working of pumps with performance

318AET04	Solid Mechanics	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

This course is designed

a) To give brief descriptions on the behavior of materials due to axial loading.
b) To understand the shear force and bending moment diagrams.
c) To generate equation for deflection of beams and to understand the basic concepts of beams and column design.
d) To understand the torsion and behavior of helical springs while applying load.
e) To understand the thin circular cylinder behavior while loading.

UNIT I BASICS AND AXIAL LOADING **9 Periods**

Introduction, stress, strain, mechanical properties of materials, Linear elasticity, Hooke's Law and Poisson's ratio, Elastic constants and their relationship, Volumetric strain, expression for volumetric strain, composite bar, Thermal Stresses – stresses due to freely falling weight.

UNIT II TRANSVERSE LOADING ON BEAMS **9 Periods**

Introduction, Types of beams, loads and reactions, Shear force and bending moment diagrams for simply supported and cantilever beams-Bending stresses in straight beams-Shear stresses in bending of beams with rectangular, I & T etc cross sections-beams of uniform strength

UNIT III DEFLECTION OF BEAMS AND SHEAR STRESSES **9 Periods**

Introduction, differential equation for deflection, equations for deflections, Double integration method – McCauley's method - Area moment method – Conjugate beam method-Principle of super position-Castiglione's theorem and its application

UNIT IV TORSION AND SPRINGS **9 Periods**

Introduction, pure torsion, assumptions, Torsion of circular shafts - shear stresses and twist in solid and hollow circular shafts – closely coiled helical springs.

UNIT V THIN CYLINDERS / SHELLS, COMPLEX STATE OF STRESS **9 Periods**

Stresses in thin circular cylinder and spherical shell under internal pressure – volumetric Strain.Combined loading – Principal Stresses and maximum Shear Stresses - Analytical and Graphical methods.

Total: 45 Periods

COURSE OUTCOMES

Upon completion of this course, students will be able to

a) Students are able to understand the behavior of materials due to axial, bending, tensional and combined loads.
b) Apply the knowledge of solid mechanics on various material and their properties
c) Able to analyze the beams and torsion of shafts easily.
d) Students can able to know the behavior of springs while loading
e) Acquired knowledge of thin cylinders.

318AET05	Production Technology	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

This course is designed

a) To understand the basics of casting processes and its types in Production.
b) To learn classifications and Types of Welding.
c) To learn the operation of Lathe, UMM, UDM, and CNC machines.
d) To understand the types of plastics and to learn the process of formation of plastic products.
e) To understand the Metal forming, Shaping and Power metallurgy Techniques

UNIT I CASTING **9 Periods**

Casting types, Types of Patterns-Allowances procedure to make sand mould, types of core making, moulding tolls, machine moulding, special moulding processes-co_2moulding; shell moulding, investment moulding, permanent mould casting, pressure die casting, centrifugal casting, continuous casting, casting defects.

UNIT II WELDING **9 Periods**

Classification of welding processes, Principles of Oxyacetylene gas welding. A.C. metal arc welding, resistance welding, submerged arc welding, tungsten inert gas welding, metal inert gas welding, plasma arc welding, thermal welding, electron beam welding, laser beam welding, defects in welding, soldering and brazing.

UNIT III MACHINING **9 Periods**

Basic Principles and Operations of following machines: Lathe, Shaper, Planer, Universal milling machine, Slotter, Universal drilling machine, cylindrical grinding machine. Basics of CNC machines.

UNIT IV PRODUCTION OF PLASTIC COMPONENTS **9 Periods**

Types of plastics -Moulding of Thermoplastics-working principles and typical applications of Injection moulding-Plunger and screw machines-Blow moulding-Rotational moulding-Film moulding-Extrusion-typical industrial applications-Thermoforming-processing of thermosets-working principles and typical applicationscompression moulding-Transfer moulding-Bonding of thermoplastics Fusion and solvent methods-Induction and Ultrasonic methods.

UNIT V METAL FORMING AND POWDER METALLURGY **9 Periods**

Principles and applications of the following processes: Forging, Rolling, Extrusion, Wire drawing and Spinning, Powder metallurgy-Principal steps involved advantages. Disadvantages and limitations of powder metallurgy.

Total : 45 Periods

COURSE OUTCOMES

Upon completion of this course, students will be able to

a) Understand the basics of casting processes in Production
b) Students will learn classifications and Types of Welding for production process
c) Students can able to understand Metal forming, Shaping and Power metallurgy Techniques.
d) Students can acquire the knowledge in production of plastic components.
e) Students can able to understand metal forming techniques.

318AEE06	Elements of Aeronautics	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

This course is designed

a) Understand the Historical evaluation of Airplanes
b) Study the different component systems and functions
c) Understand the basic properties and principles behind the flight
d) Study the different structures & construction
e) Study the various types of power plants used in aircrafts

UNIT IHISTORY OF FLIGHT **9 Periods**

Balloon flight-Ornithopter-Early Airplanes by Wright Brothers, biplanes and monoplanes, Developments in aerodynamics, materials, structures and propulsion over the years.

UNIT II AIRCRAFT CONFIGURATIONS AND ITS CONTROLS **9 Periods**

Different types of flight vehicles, classifications-Components of an airplane and their functions-Conventional control, powered control- Basic instruments for flying-Typical systems for control actuation.

UNIT III BASICS OF AERODYNAMICS **9 Periods**

Physical Properties and structures of the Atmosphere, Temperature, pressure and altitude relationships, Newton's Law of Motions applied to Aeronautics-Evolution of lift, drag and moment. Aerofoils, Mach number, Maneuvers.

UNIT IV BASICS OF PROPULSION **9 Periods**

Basic ideas about piston, turboprop and jet engines – use of propeller and jets for thrust production-Comparative merits, Principle of operation of rocket, types of rocket and typical applications, Exploration into space.

UNIT V BASICS OF AIRCRAFT STRUCTURES **9 Periods**

General types of construction, Monocoque, semi-monocoque and geodesic constructions, typical wing and fuselage structure. Metallic and non-metallic materials. Use of Aluminium alloy, titanium, stainless steel and composite materials. Stresses and strains-Hooke's law- stress-strain diagrams-elastic constants-Factor of Safety.

Total: 45 Periods

COURSE OUTCOMES:

a) Learn the history of aircraft & developments over the years
b) Ability to identify the types & classifications of components and control systems
c) Understand the basic concepts of flight & Physical properties of Atmosphere
d) An ability to differentiate the types of fuselage and constructions.
e) Different types of Engines and principles of Rocket

TEXT BOOKS

1. Anderson, J.D., Introduction to Flight, McGraw-Hill; 8th edition, 2015

318AEP07	Strength of Materials Laboratory	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

To have the knowledge in testing of mechanical properties of materials.

LIST OF EXPERIMENTS

1. Brinell Hardness test
2. Rockwell Hardness test
3. Vickers Hardness Test
4. Tension test
5. Torsion test
6. Izod Impact test
7. Charpy Impact test
8. Study of Reverse plate bending Fatigue test
9. Study of Rotating Beam Fatigue test
10. Testing of springs
11. Block Compression Test

Total: 45 Periods

COURSE OUTCOME

a) Students can able to determine the material hardness
b) Understand the torsion properties of material.
c) Students can able to understand the loss of energy during impact.
d) Students can understand about fatigue testing and types of fatigue failure.
e) Students can able to determine the stiffness and strength of the material.
f) Students understands the various types of material testing and evaluation of mechanical properties.

LIST OF EQUIPMENTS

(For a batch of 36 students)

Sl.No	Details of Equipments	Qty Required	For Experiments
1.	Hardness Testing Machine	1	1, 2, 3
2.	Universal Testing Machine	1	4, 11
3.	Impact Testing Machine	1	6, 7
4	Torsion testing machine	1	5
5	Compressive strength test machine	1	10

Hosur - 635 109, Tamil Nadu.

318AEP08	Fluid Mechanics and Machinery Laboratory	L	T	P	C
		3	0	0	3

COURSE OBJECTIVE

To study the flow measurement and the performance of fluid machinery

LIST OF EXPERIMENTS

1. Calibration of venturi meter
2. Pressure measurement with pitot static tube
3. Determination of pipe flow losses.
4. Verification of Bernoulli's theorem
5. Performance test on centrifugal pumps
6. Performance test on reciprocating pumps
7. Performance test on pelton wheel turbine
8. Performance test on Francis turbine
9. Performance test on Kaplan turbine
10. Determination of Viscosity of Fluid

TOTAL: 45 Periods

COURSE OUTCOME

Students are able to understand the flow measurement and the performance of fluid machinery equipments.

a) Students can able to understand the fluid passed or passing through the flowmeter.
b) Students can able to understand the bernoulli's theorem.
c) Understand the working of reciprocating pump.
d) Understand the water turbine and flow types.
e) Students can able to understand the nature of the flow of a given fluid.

LIST OF EQUIPMENTS

(For a batch of 36 students)

Sl.No	Details of Equipments	Qty Req.	Experiment No.
1.	Venturimeter setup	1	1,3
2.	Pipe friction set up	1	3
3.	Pitot tube set up	1	2,4
4.	Centrifugal pump	1	5
5.	Reciprocating pump	1	6
6.	Pelton wheel turbine, Francis and Kaplan	1 (each one)	7, 8, 9

Hosur - 635 109, Tamil Nadu.

318AEP09	Thermodynamics Laboratory	L	T	P	C
		3	0	3	1

OBJECTIVE

To enhance the basic knowledge in applied thermodynamics

LIST OF EXPERIMENTS

1. Performance test on a 4-stroke engine
2. Valve timing of a 4 – stroke engine and port timing of a 2 stroke engine
3. Determination of effectiveness of a parallel flow heat exchanger
4. Determination of effectiveness of a counter flow heat exchanger
5. Determination of heating value of a fuel
6. COP test on a vapour compression refrigeration test rig
7. COP test on a vapour compression air-conditioning test rig
8. Determination of specific heat of solid
9. Determination of Thermal Conductivity of solid.
10. Determination of Thermal Resistance of a Composite wall.

TOTAL: 45 Periods

LIST OF EQUIPMENTS

(For a batch of 36 students)

Sl.No	Details of Equipments	Qty Req.	Experiment No.
1.	4 stroke twin cylinder diesel engine	1	1
2.	Cut section model of 4 stroke diesel engine and cut section model of 2 stroke petrol engine	2 each	2
3.	Parallel and counter flow heat exchanger test rig	1	3,4
4.	Bomb Calorimeter	1	5, 8
5.	Vapour compression refrigeration test rig	1	6
6.	Vapour compression air-conditioning test rig	1	7
7.	Conductive Heat Transfer set up	1	9
8.	Composite wall	1	10

COURSE OUTCOMES

Upon completion of this course, students will be able to

a) Students can able to understand the working of internal combustion engine.
b) Studends can able to determine the performance test and calculate the heat transfer rate, LMTD, and effectiveness of a heat exchanger in a parallel and counter flow heat exchanger.
c) Understand the working of Vapour compression by using testing rig
d) Learn Condutive heat transfer is depends on temperature gradient between the two bodies .
e) Students can able to understand the heat transfer between composite wall depends upon the layer material.

	L	T	P	C
418SNT01 STATISTICS AND NUMERICAL METHODS	3	1	0	4

(Mechanical and Aeronautical Engineering - Regulation 2015)

Course Objectives

a) To solve equations using direct and iterative methods , to introduce interpolation techniques and to study the principle of numerical differentiation and integration.
b) To learn some of the methods of numerical solutions of ordinary differential equations with initial conditions.
c) To introduce the notion of sampling distributions techniques
d) To acquired knowledge of statistical techniques useful in making rational decision in management problems.
e) To expose to statistical methods designed to contribute to the process of making scientific judgments in the face of uncertainty and variation.

UNIT I SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS **9 +3**

Newton-Raphson method- Direct Methods-Gauss Elimination method-Gauss-Jordan methods – Iterative methods of Gauss-Jacobi and Gauss-Seidel – Eigen values of a matrix by Power method .

UNIT II INTERPOLATION, NUMERICAL DIFFERENTIATION AND NUMERICAL INTEGRATION **9 +3**

Newton's forward and backward difference interpolation - Lagrange's and Newton's divided difference interpolation - Approximation of derivatives using interpolation polynomials - Numerical integration using Trapezoidal and Simpson's $1/3^{rd}$ and $3/8^{th}$ rules.

UNIT III NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS **9 + 3**

Taylor's series method - Euler's method - Modified Euler's method - Fourth order Runge-Kutta method for solving first order equations - Predictor-Corrector methods for solving first order equations: Milne's Method and Adam-Bashforth Method.

UNIT IV TESTING OF HYPOTHESIS **9 + 3**

Sampling distributions - Tests for single Mean, Proportion, Difference of means (large and small samples) – Tests for single variance and equality of variances – Chi-square test for goodness of fit – Independence of attributes.

UNIT V DESIGN OF EXPERIMENTS **9 + 3**

ANOVA - Completely randomized design – Randomized block design – Latin square design.
Control charts for measurements ($\bar{x}$ and R-charts).

Total = 45 + 15 = 60 Periods

Course Outcomes

At the end of the course the student will be able to

- Apply numerical methods such as direct, iterative and interpolation
- Solve algebraic transcendental equations and system of equations.
- Appreciate numerical solutions for differential and integral calculus as a handy tool to solve problems.
- Implement numerical algorithms to find solutions for intial value problems for ordinary differential equations .
- Draw inference and decision making through hypothesis testing.

418AET02	AERODYNMICS - I	L	T	P	C
		3	0	0	3

COURSE OBJECTIVE

This course is designed

a) To builds on the student's background in Fluid Mechanics to deal primarily with internal and external flows relevant to aerospace applications.
b) To understand the concept of Airfoil theory to predict airfoil performance and optimize wing performance.
c) To evaluate and understand the Generation of Lift, wing theory and boundary layer concepts.
d) To make the student understand the concept of vorticity, irrotationality, theory of airfoils and wing sections
e) To introduce the basics of viscous flow and the concepts of mass, momentum and energy conservation relating to aerodynamics.

UNIT I BASICS OF AERODYNAMICS **9 Periods**

Properties of fluids, Type of fluid flows, Generation of Lift, Drag and Moment, Incompressible flows over airfoils, calculation of lift and drag from measured pressure distribution, Streamlined and bluff-body, Reynolds number and Mach number, Conservation law of mass and momentum, Euler and Bernoulli's equations, pitot-tube measurement of airspeed .Pressure coefficient. Streamlines, path lines and streak lines. Angular velocity, vorticity, circulation Stream function, velocity potential and their relationship.

UNIT II TWO DIMENSIONAL FLOWS **9 Periods**

Basic flows – Source, Sink, Free and Forced vortex, uniform parallel flow. Their combinations, Pressure and velocity distributions on bodies with and without circulation in ideal and real fluid flows.

UNIT III GENERATION OF LIFT **9 Periods**

Kutta Joukowski's theorem. Kutta condition in Aerodynamics and Applied to Aero foils. Blasius theorem. Prandtls lifting line theory and limitations.Two dimensional and three dimensional wings lift curve slope and effect of aspect ratio. High lift devices.

UNIT IV AIRFOIL AND WING THEORY **9 Periods**

Joukowski, Karman - Trefftz, Profiles - Thin airfoil theory and its applications. Vortex line, Horse shoe vortex, Biot and Savart law, Lifting line theory and its limitations,

UNIT V VISCOUS FLOW **9 Periods**

Newton's law of viscosity, Boundary Layer, Navier-Stokes equation, displacement, Momentum thickness, Flow over a flat plate, Blasius solution. Full velocity potential equation, Fanno flow and fanno line, Rayleigh flow and Rayleigh line. Method of characteristics and its application. Flow past Wedge and cone,

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

Case studies:

Application of equation of motion by using Navier-stokes, parallel computation of viscous flow around the aircraft wing

Total: 45Periods

COURSE OUTCOME

On successful completion of the course student should be able to

a) Understand the background of Fluid Mechanics to analyze internal and external flows relevant to aerospace applications.
b) Apply the Knowledge of Airfoil theory to predict airfoil performance and ability to analyze and optimize wing performance.
c) Understand the Generation of Lift with different airfoils, wing theory and boundary layer concepts.
d) Apply propeller theory to predict blade performance
e) An exposure to Boundary layer theory

418AET03	AIRCRAFT SYSTEMS AND INSTRUMENTS	L	T	P	C
		3	0	0	3

COURSEOBJECTIVE

This course is designed

a) To understand the Airplane Control Systems and different Aircraft systems to enhance the aircraft by different systems.
b) To builds the strong background of a student towards Aircraft engine systems and Auxiliary systems.
c) To familiarize the student with the principles of flight test instrumentation, components of instrumentation systems, and the signal condition required to deal with typical flight test sensors.
d) To impart knowledge of the hydraulic and pneumatic systems components and types of instruments and its operation including navigational instruments to the students
e) To understand the concept of Navigation Instruments

UNIT I AIRPLANE CONTROL SYSTEMS **9 Periods**

Conventional Systems - fully powered flight controls - Power actuated systems – Modern control systems - Digital fly by wire systems - Auto pilot system active control Technology.

UNIT II AIRCRAFT SYSTEMS **9 Periods**

Hydraulic systems - Study of typical workable system - components - Pneumatic systems - Advantages - Working principles - Typical Air pressure system – Brake system - Typical Pneumatic power system - Components, Landing Gear systems - Classification

UNIT III ENGINE SYSTEMS **9 Periods**

Fuel systems for Piston and jet engines, - Components of multi engines. Lubricating systems for piston and jet engines Starting and Ignition systems - Typical examples for piston and jet engines.

UNIT IV AUXILIARY SYSTEM **9 Periods**

Basic Air cycle systems - Vapor Cycle systems, Evaporative vapor cycle systems - Evaporative air cycle systems - Fire protection systems, Deicing and anti-icing systems.

UNIT V AIRCRAFT INSTRUMENTS **9 Periods**

Flight Instruments and Navigation Instruments – Gyroscope - Accelerometers, Air speed Indicators – TAS, EAS- Mach Meters - Altimeters - Principles and operation - Study of various types of engine instruments - Tachometers - Temperature gauges - Pressure gauges - Operation and Principles.

TOTAL: 45 Periods

COURSE OUTCOME

On successful completion of the course student should be able to

a) Apply the knowledge of Airplane Control Systems and different Aircraft systems to enhance the aircraft by advanced systems.
b) Design and analyze the Aircraft engine systems and Auxiliary systems for upcoming aircrafts

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

c) Asses the flight test instrumentation, components of instrumentation systems, and the signal condition required to deal with typical flight test sensors.
d) Acquire and interpret data from various aircraft instruments.
e) Identify the various cockpit controls.

418AET04	AIRCRAFT STRUCTURES - I	L	T	P	C
		3	0	0	3

COURSE OBJECTIVE

This course is designed

a) To study the basics of aircraft structural parts functioning and different types of beams and columns
b) To study various types of loading and support conditions with particular emphasis on aircraft structural components.
c) To familiarize with failure theory and its real time applications
d) To provide the students an understanding on the linear static analysis of determinate and indeterminate aircraft structural components.
e) To provide the design process using different failure theories.

UNIT I INTRODUTION TO AIRCRAFT STRUCTURES AND LOADS ON AIRCRAFT **9 Periods**

Structural nomenclature-types of loads, load factor, aerodynamic loads, symmetric manoeuvre loads, Detail description and functions of structural components.

UNIT II STATICALLY DETERMINATE AND INDETERMINATE STRUCTURES **9 Periods**

Analysis of plane Truss-Method of joints-3 D Truss-Plane frames-Composite beam Propped Cantilever- Fixed-Fixed beams-Clapeyron's Three Moment Equation - Moment Distribution Method.

UNIT III ENERGY METHODS **9 Periods**

Strain Energy due to axial, bending and torsional loads–Castiglione's theorems- Maxwell's Reciprocal theorem, Unit load method - application to beams, trusses, frames, rings, etc.

UNIT IV COLUMNS **9 Periods**

Columns with various end conditions – Euler's Column curve – Rankine's formula - Column with initial curvature - Eccentric loading – South well plot – Beam column.

UNIT V FAILURE THEORY **9 Periods**

Maximum Stress theory – Maximum Strain Theory – Maximum Shear Stress Theory – Distortion Theory- Maximum Strain energy theory – Application to aircraft Structural problems.

Total: 45Periods

COURSE OUTCOME

On successful completion of the course, student should be able to

a) Apply knowledge of beams and columns to solve aeronautical engineering problems.
b) Handle design and analysis of aircraft structural components.
c) Understand the failure theory and its applications.
d) Create a structure to carry the given load.

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu

e) Examine the structural failures using failure theories

418AET05	PROPULSION-I	L	T	P	C
		3	0	0	3

COURSE OBJECTIVE

This course is designed

a) To build up necessary background for understanding the basics of aircraft propulsion.
b) To understand the application of various experimental fluid mechanics correlations in propulsion.
c) To understand the working principle of various GTE components like compressor, combustor, and Nozzles.
d) To establish fundamental approach and application of jet engine components
e) To analysis of flow phenomenon and estimation of thrust developed by jet engine.

UNIT I FUNDAMENTALS OF GAS TURBINE ENGINES **9 Periods**

Illustration of working of gas turbine engine – The thrust equation – Factors affecting thrust – Effect of pressure, velocity and temperature changes of air entering compressor – Methods of thrust augmentation – Characteristics of turboprop, turbofan and turbojet – Performance characteristics.

UNIT II SUBSONIC AND SUPERSONIC INLETS FOR JET ENGINES **9 Periods**

Internal flow and Stall in subsonic inlets – Boundary layer separation – Major features of external flow near a subsonic inlet – Relation between minimum area ratio and eternal deceleration ratio – Diffuser performance – Supersonic inlets Starting problem on supersonic inlets – Shock swallowing by area variation – External declaration – Models of inlet operation.

UNIT III COMPRESSORS **9 Periods**

Principle of operation of centrifugal compressor – Work done and pressure rise – Velocity diagrams – Diffuser vane design considerations – Concept of pre-whirl, rotation stall and surge – Elementary theory of axial flow compressor Velocity triangles – degree of reaction – Three dimensional – Air angle distributions for free vortex and constant reaction designs – Compressor blade design – Centrifugal and Axial compressor performance characteristics.

UNIT IV COMBUSTION CHAMBERS AND TURBINES **9 Periods**

Classification of combustion chambers – Important factors affecting combustion chamber design – Combustion process – Combustion chamber performance – Effect of operating variables on performance – Flame tube cooling Flame stabilization – Use of flame holders. Different types of Aircraft Turbines, operation &Working Principles

UNIT V NOZZLES **9 Periods**

Theory of flow in isentropic nozzles – nozzles and choking – Nozzle throat conditions – Nozzle efficiency Losses in nozzles – Over expanded and under – expanded nozzles – Ejector and variable area nozzles Interaction of nozzle flow with adjacent surfaces – Thrust reversal.

Total: 45 Periods

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOME

On successful completion of the course, students should be able to

a) Understanding the basics of propulsion system and different types of air breathing engine used in A/C
b) Understand the Performance of inlets, burners, nozzles, compressors and turbines.
c) To design and executive numerical propulsion analysis.
d) To apply ideal and actual cycle analysis to a gas turbine engine to relate thrust and fuel burn to component performance parameters.
e) Understanding the workings of multistage compressor or turbine, and to be able to use velocity triangles and the Euler Turbine Equation to estimate the performance of a compressor or turbine stage.

418AEE06	Metal Joining Process and NDT	L	T	P	C
		3	0	0	3

COURSE OBJECTIVE

This course is designed

a) To understand the basics of Metal joining process
b) To study various types of metal joining process and various types of joints
c) To understand the concept of material testing and NDT
d) To study and understand the various Non-Destructive Evaluation and Testing methods, theory and their industrial applications.
e) To understand Composite materials and Damage Inspection

UNIT I BASICS OF METAL JOINING PROCESS **9 Periods**

Introduction, History, Importance of Metal Joining Processes, Types of Metal joining processes, joining process as a manufacturing route. Relevance of joining process to metallurgy. Classification of joining process. Safety aspects in Metal joining processes.

UNIT II CONVENTIONAL METAL JOINING PROCESS **9 Periods**

Introduction, classification of welding processes, Welding as compared to riveting and casting, Weld Joints & Metallurgy, Various types of weld joints & weld symbols, Standard location of elements of welding symbols, Heat affected zone and its properties. Soldering, brazing, adhesive bonding processes, Advantages and disadvantages of welding, Soldering, Brazing and Riveting

UNIT III ADVANCED METAL JOINING PROCESS **9 Periods**

Radiant energy welding processes - equipment -electron beam welding (EBW) - laser beam welding (LBW) - applications of EBW and LBW- Friction Steel Welding- Ultrasonic welding, Under water welding, Industrial applications of Modern Welding Processes Defects in welding.

UNIT IV MATERIAL TESTING **9 Periods**

Testing of Materials- Tensile testing, compression testing - Hardness Testing. Testing of Materials- Impact testing, Fatigue testing, Creep.

UNIT V NON DESTRUCTIVE TESTING **9 Periods**

Visual Inspection and Eddy current testing, liquid penetration testing, Magnetic particle testing, Radiographic testing, Ultra sonic testing, Composite Damage Inspection, X-Ray Technique, SEM, Dye Penetration Test.

Total: 45 Periods

COURSE OUTCOME

On successful completion of the course student should be able to

a) Apply the knowledge of metal joining process and its applications to engineering field
b) Understand the concept of welding, riveting and soldering.
c) Evaluate the testing of materials and estimate different types of metal joining process

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

d) Students will be able to understand the concept of Ultrasonic Testing and Acoustic Emission
e) Understand the concept of Radiography

TEXT BOOKS

1. The Metallurgy of Welding, Brazing and Soldering – J.F. Lancaster, George Alien and Unwin Ltd., LondonEdition2012
2. Welding Technology- O.P. Khanna Khanna Pub, Edition 2011
3. Ravi Prakash, "Non-Destructive Testing Techniques", 1st revised edition, New Age International Publishers, 2010

REFERENCE BOOKS

1. P.N. Rao, "Manufacturing Technology", Vol. II, Tata McGraw Hill. Edition 2011
2. S V Nadkarni, Modern Arc Welding Technology, Ador Welding Limited, Edition 2010, New Delhi

3.Paul E Mix, "Introduction to Non-destructive testing: a training guide", Wiley, 2 nd Edition New Jersey, 2005

Course Outcome		PSO1	PSO2	PSO3	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
Co1	Apply the knowledge of metal joining process and its applications to engineering field	3	1		3	2	3	1	3						1	
Co2	Understand the concept of welding, riveting and soldering.	3	1		3	2	3	1	3						1	
Co3	Evaluate the testing of materials and estimate different types of metal joining process	3	1		3	2	3	1	3						1	
Co4	Students will be able to understand the concept of Ultrasonic Testing and Acoustic Emission	3	1		3	2	3	1	3						1	
Co5	Understand the concept of Radiography		2		3	2	3	1	3						1

Hosur - 635 109, Tamil Nadu.

418AEP07	Aircraft Structures Lab - I	L	T	P	C
		0	0	2	1

COURSE OBJECTIVE

To study experimentally the load deflection characteristics structural materials under different types of loads.

LIST OF EXPERIMENTS

1. Determination of Young's modulus of steel using mechanical extensometers.
2. Determination of Young's modulus of aluminum using electrical extensometers
3. Determination of Strain in AL, MS and SS Using Electrical Strain Guage Setup
4. Determination of forces in statically indeterminate force system.
5. Deflection of beams with various end conditions.
6. Verification of Maxwell's Reciprocal theorem & principle of superposition
7. Column – Testing
8. Verification of Castiglione's theorem
9. Testing of Riveted Joints.
10. Determination of membrane stresses in a thin cylinder under internal pressure.

Total: 45 Periods

LIST OF EQUIPMENTS

(For a batch of 36 students)

Sl. No.	Equipment's	Qty	Experiments No.
1.	Universal Testing Machine	1	1,2,9
2.	Mechanical Extensometer	1	1
3.	Electrical strain gauge	10	2, 4, 10
4.	Hinged bar suspended by two wires of different materials.	1	4
5.	Strain indicator	2	2,3, 4, 10
6.	Dial Gauges	10	5, 6, 8
7.	Beam Test set up with various end conditions	2	5, 6, 8
8.	Column Test Apparatus	1	8
9.	Thin walled pressure vessel	1	10

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

Course Outcomes

After successful completion of this course, the students should be able to

1. Identify statically determinate and indeterminate structures.

2. Analyze the response of statically indeterminate structures under various loading conditions.

3. Determine the reactions of structures using strain energy concept.

4. Identify different numerical methods available to solve a single structural problem.

5. Examine the structural failures using failure theories.

Course Outcome		PSO 1	PSO 2	PSO 3	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12
Co1	Identify statically determine and indeterminate structures.	3	1		3	2	3	1	3						1	
Co2	Analyze the response of statically indeterminate structures under various loading conditions	3	1		3	2	3	1	3						1	
Co3	Determine the reactions of structures using strain energy concept	3	1		3	2	3	1	3						1	
Co4	Determine the reactions of structures using strain energy concept	3	1		3	2	3	1	3						1	
Co5	Examine the structural failures using failure theories		2		3	2	3	1	3						1

		L	T	P	C
418AEP08	Aerodynamics Laboratory	0	0	2	1

COURSE OBJECTIVE

To familiarize the students in basic aerodynamics and use of wind tunnels.

LIST OF EXPERIMENTS

1. Pressure distribution over circular cylinder.
2. Pressure distribution over airfoil and estimation of C_L and C_D.
3. Force measurement using wind tunnel balance.
4. Pressure Distribution over an symmetric Airfoil
5. Pressure Distribution on a cylinder
6. Pressure Distribution over a sphere
7. Estimation of aerodynamics characteristics of NACA0012 airfoil
8. Flow visualization in water flow channel
9. Shadow graph system to visualize the flows
10. Torque measurement using wind tunnel on symmetrical airfoil

Total: 45 Periods

COURSE OUTCOME

a) To understand the pressure distribution of circular cylinder and over airfoil, CL and CD
b) Study the wind tunnel balance and pressure distribution on symmetrical airfoil
c) Analyze pressure over an sphere and aerodynamics characteristics of NACA0012
d) Understand the visualization in water flow channel
e) Analyze the measurement using wind tunnel on symmetrical airfoil

LIST OF EQUIPMENT

(For a batch of 36 students)

Sl. No.	Items	Quantity	Experiment No.
1.	Blower, Balance and small aspect ratio model	1 each.	1
2.	Water flow channel & models	1 set	2
3.	Subsonic wind tunnel	1 No.	3, 4,5,6,7
4.	Smoke apparatus and rake	1 each.	3

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu

5.	Manometer, Pitot-Static tube	1 No.	4,5,6
6.	Circular cylinder and Aerofoil pressure distribution models	1 each	5,6
7.	Wind tunnel strain gauge balance	1 No.	7
8.	Supersonic wind tunnel, Mercury manometer	1 No.	8,9,10
9.	Schlieren system and Shadow graph system	1 No.	9,10
10.	Sharp nosed and Blunt nosed models	1 No. each	9,10

Course Outcome		PSO1	PSO2	PSO3	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
Co1	To know the broad view of the space technology with regard to rocket propulsion.	3	1		3	2	3	1	3						1	
Co2	To understand the basic knowledge about satellite orbits, satellite dynamics and orbital elements	3	1		3	2	3	1	3						1	
Co3	To know the different cases of satellite orbit transfer, orbit perturbations and Basic of rocket flight dynamics, and ballistic missile trajectories.	3	1		3	2	3	1	3						1	
Co4	Estimate the trajectory/orbit of a space vehicle or a satellite in a suitable coordinate system.	3	1		3	2	3	1	3						1	
Co5	Perform orbit perturbation analysis for satellite orbits.		2		3	2	3	1	3						1	

Chairman

ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

		L	T	P	C
418AEP11	PRODUCTION TECHNOLOGY LABORATORY	0	0	2	1

COURSE OBJECTIVE

The main objective of this course is

To emphasize the importance manufacturing sciences in the day-to-day life, and to study the basic manufacturing processes and tools used

LIST OF EXPERIMENTS

1. LATHE
   - 1.1. Facing, plain turning and step turning
   - 1.2. Taper turning using compound rest.
   - 1.3. Taper turning using taper turning attachment
   - 1.4. Single start V thread, cutting and knurling
   - 1.5. Boring and internal thread cutting.

2. SHAPER AND SLOTTER
   - 2.1. Machining a V- block (in a Shaper)
   - 2.2. Machining hexagonal shape (in a Shaper)
   - 2.3. Machining internal key-way (in a slotter)

3. DRILLING
   - 3.1 Drilling 4 or 6 holes at a given pitch circle on a plate
   - 3.2. Drilling, reaming and tapping

4. MILLING
   - 4.1. Plain Milling Exercise
   - 4.2. Gear Milling Exercise

5. GRINDING

   Cylindrical Grinding Exercise

Total : 45 Periods

Course Outcome

a) To understand the lathe(facing plain taper turning single start boring)

b) Study about the shaper and slotter

c) Analyze the drilling

d) Understand the milling and its experiments

e) To study the grinding

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

LIST OF EQUIPMENTS

(For A Batch Of 36 Students)

1.	Centre Lathe with accessories	5No.
2.	Shaping Machine	2 No.
3.	Slotting Machine	1 No.
4.	Radial Drilling Machine	2No.
5.	Upright Drilling Machine	2No.
6.	Milling Machine	2No.
7.	Cylindrical Grinding Machine	1 No.

Course Outcome		PSO1	PSO2	PSO3	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
Co1	Able to apply fundamentals of mechanism for the design of new mechanisms and analyse them for optimum design.	3	1		3	2	3	1	3						1	
Co2	An ability to analyze the gear and cam mechanisms.	3	1		3	2	3	1	3						1	
Co3	An ability to use different mechanisms and Torsion vibration in aircraft systems.	3	1		3	2	3	1	3						1	
Co4	Understand the importance of Governors and Gyroscopic effects.	3	1		3	2	3	1	3						1	
Co5	Understand the importance of vibration		2		3	2	3	1	3						1

Hosur - 635 109, Tamil Nadu.

518AET01	Aircraft Structures II	L T P C 3 0 0 3

PRE-REQUISITE:- Knowledge of Aircraft Structures I

COURSE OBJECTIVE

The Students will be able to

a) Study the behavior of various aircraft structural components under different types of loads.
b) Describe forces acting on structural members and to study the shear flow in open and closed sections
c) Understand the Buckling of Plates with Crippling Stresses and different methods
d) Analyze the stress in wing and fuselage with Shear and bending moment.
e) To describe the stress analysis in wing and fuselage

UNIT I BENDING STRESS **9 Periods**

Bending stresses in beams of symmetrical sections – Bending of symmetric sections with Skew Loads and unsymmetrical sections with Skew Loads. Numerical Problems.

UNIT II SHEAR FLOW IN OPEN SECTIONS **9 Periods**

Thin walled beams, Concept of shear flow, shear Centre, Elastic axis. With one axis of symmetry, with wall effective and ineffective in bending, unsymmetrical beam sections.

UNIT III SHEAR FLOW IN CLOSED SECTIONS **9 Periods**

Bredt – Batho formula, Single and multi – cell structures. Approximate methods. Shear flow in single &multi-cell structures under torsion. Shear flow in single and multi-cell under bending with walls effective and ineffective.

UNIT IV BUCKLING OF PLATES **9 Periods**

Introduction to theory of plates & shells. Rectangular sheets under compression, Local buckling stress of thin walled sections, Crippling stresses by Needham's and Gerard's methods, Thin walled column strength. Sheet stiffener panels. Effective width, inter rivet and sheet wrinkling failures.

UNIT V STRESS ANALYSIS IN WING AND FUSELAGE **9 Periods**

Procedure – Shear and bending moment distribution for semi cantilever and other types of wings and fuselage, thin webbed beam. With parallel and non-parallel flanges, Shear resistant web beams, Tension field web beams (Wagner's).

TOTAL: 45 Periods

COURSE OUTCOME

Upon successful completion of the course, students will be able to

a) Understand the behavior of various aircraft structural components under different types of loads
b) Build the Knowledge about shear flow in open and closed sections of aircraft structural parts
c) Apply the concept of Buckling and Crippling stresses with different methods
d) Simplify the Analysis of the stress in wing and fuselage with Shear and bending moment.
e) To understand the stress analysis in wing and fugelage

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)

Hosur - 635 109, Tamil Nadu.

518AET02	Aircraft Performance	L T P C 3 0 0 3

PRE-REQUISITE :- Knowledge of Aerodynamics and Elements of Aeronautics

COURSE OBJECTIVE

The Students will be able to

a) Study the Basics of Flight Performance under various conditions
b) Describe the various climbing and turning performance of an aircraft
c) Learn the condition for minimum drag and minimum power in an aircraft.
d) Understand the Special performances of an aircraft engines and to study about propellers
e) To Describe the propellers and various performance of propollers

UNIT I FLIGHT PERFORMANCE **9 Periods**

Streamlined and bluff bodies, aerofoil classification, Aerofoil characteristics, Pressure distribution around aerofoil's. Types of drag, Effects of Reynolds's number on skin friction and pressure drag, Drag reduction of airplanes. , Induced drag, Chordwise and spanwise pressure distribution. Aspect ratio, Camber and plan form characteristics, drag polar.

UNIT II STEADY FLIGHT **9 Periods**

Steady level flight, Thrust/power, available and required with altitude Estimation of maximum level flight speed, conditions for minimum drag and minimum power, maximum range and gliding.

UNIT III CLIMBING AND TURNING PERFORMANCE **9 Periods**

Minimum rate of skin a glide, Take off power, Rate of glide, Shallow angle of climb, Rate of climb, time to climb and ceilings, Glide hodograph. Bank angle and load factor, Limitations on turn, Pull up and push over, the v-n diagram.

UNIT IV SPECIAL PERFORMANCE **9 Periods**

Aero Engine (Piston, Jet) Range and endurance of jet and propeller type of airplanes estimation of take-off and landing distance. High lift devices, Use of thrust augmentation and reverse thrust.

UNIT V PROPELLERS **9 Periods**

Froude momentum and blade element theories, Propeller coefficients, Use of propeller charts, performance of fixed and variable pitch propeller.

Total: 45 Periods

COURSE OUTCOME:

Upon completion of this course, students will be able to

a) Apply the knowledge of Basics of Flight Performance under various conditions to Aircraft industry.
b) Understand the various climbing and turning performance of an aircraft
c) Analyze the condition for minimum drag and minimum power in an aircraft.
d) Examine the Special performances of an aircraft engines and to study about propellers.
e) Build the knowledge of propeller and about the performance of propoller

Hosur - 635 109, Tamil Nadu.

518AET03	Aerodynamics II	L T P C 3 0 0 3

PRE-REQUISITE :- Knowledge of Aerodynamics-I

COURSE OBJECTIVE

The Students will be able to

a) Understand the behavior of airflow both internal and external in compressible flow regime with particular emphasis on supersonic flows.
b) Analyze the various concepts of shockwaves and Expansion waves
c) Study the High Speed flows in airfoils with Critical Mach numbers and Characteristics of wings
d) Describe different types of Wind tunnels with shock tubes for flow visualization
e) To study the high speed wind tunnels and classification of tunnels

UNIT I ONE DIMENSIONAL COMPRESSIBLE FLOW **9 Periods**

Energy, Momentum, continuity and state equations, velocity of sound, adiabatic steady state flow equations, Flow through converging, diverging passages, Performance under various back pressures.

UNIT II NORMAL, OBLIQUE SHOCKS AND EXPANSION WAVES **9 Periods**

Prandtl equation and Rankine – Hugonoit relation, Normal shock equations, Pitot statictube, corrections for subsonic and supersonic flows, Oblique shocks and corresponding equations, Hodograph and pressure turning angle, shock polars, flow past wedges and concave corners, strong, weak and detached shocks, Rayleigh and Fanno Flow. Flow past convex corners, two dimensional supersonic nozzle contours.

UNIT III DIFFERENTIAL EQUATIONS OF MOTION FOR STEADY COMPRESSIBLE FLOWS **9 Periods**

Small perturbation potential theory, solutions for supersonic flows, Mach waves and Mach angles, Prandtl- Glauert affine transformation relations for subsonic flows, Linearised two dimensional supersonic flow theory, Lift, drag pitching moment and center of pressure of supersonic profiles.

UNIT IV AIRFOIL IN HIGH SPEED FLOWS **9 Periods**

Lower and upper critical Mach numbers, Lift and drag divergence, shock induced separation, Characteristics of swept wings, Effects of thickness, camber and aspect ratio of wings, Transonic area rule, Tip effects.

UNIT V HIGH SPEED WIND TUNNELS **9 Periods**

Blow down, in draft and induction tunnel layouts and their design features, Transonic, supersonic and hypersonic tunnels and their peculiarities, Helium and gun tunnels, Shock tubes, Optical methods of flow visualization.

TOTAL: 45 Periods

COURSE OUTCOMES:

Upon completion of the course, students are able to

a) Categorize the behavior of airflow both internal and external in compressible flow regime with particular emphasis on supersonic flows.
b) Compare the various concepts of shockwaves and Expansion waves
c) Apply the knowledge for High Speed flows in airfoils with Critical Mach numbers
d) Understand the different types of Wind tunnels with shock tubes
e) To understand high speed wind tunnels and its classification

Chairman
Board of Studies

518AET04	PROPULSION II	L T P C 3 0 0 3

COURSE OBJECTIVE:

The Students will be able to

a) Understand the necessary background of the Aircraft Propulsion and Rocket propulsion systems
b) Study the application of various propellant systems and their properties
c) Learn the Various propulsion system, Performances and Advantages of those systems
d) Categorize different types of propulsion systems and concepts applied in nozzle propulsion
e) To understand the advanced propulsion systems and its types of propulsion system

UNIT I GAS TURBINES **9 Periods**

Impulse and reaction blading of gas turbines – Velocity triangles and power output Elementary theory – Vortex theory – Choice of blade profile, pitch and chord – Estimation of stage performance – Limiting factors in gas turbine design- Overall turbine performance – Methods of blade cooling – Matching of turbine and compressor – Numerical problems.

UNIT II RAMJET AND SCRAMJET PROPULSION: **9 Periods**

Operating principle – Sub critical, critical and supercritical operation – Combustion in ramjet engine – Ramjet performance – Sample ramjet design calculations – Introduction to scramjet – Preliminary concepts in supersonic combustion – Integral ram- rocket- Numerical problems.

UNIT III ROCKET PROPULSION **9 Periods**

Operating principle – Specific impulse of rocket – internal ballistics- Rocket nozzle classification – Rocket performance considerations – Liquid Cooling, Ablative cooling, Film cooling, Solid Propellants, Liquid Propellants - Numerical Problems.

UNIT IV CHEMICAL ROCKETS **9 Periods**

Solid propellant rockets – Selection criteria of solid propellants – Important hardware components of solid rockets – Propellant grain design considerations – Liquid propellant rockets – Selection of liquid propellants – Thrust control in liquid rockets – Cooling in liquid rockets – Limitations of hybrid rockets – Relative advantages of liquid rockets over solid rockets- Numerical Problems.

UNIT V ADVANCED PROPULSION SYSTEMS **9 Periods**

Electric rocket propulsion System – Ion propulsion System – Nuclear rocket propulsion System – Nuclear Thermal rocket Types – Solar sail- Preliminary Concepts in nozzle less propulsion.

TOTAL: 45 Periods

COURSE OUTCOME

Upon completion of the course, students will be able to

a) Learn the concept Aircraft and Rocket propulsion systems
b) Classify the applications of various propellant systems and their properties
c) Analyze various propulsion systems, Performances and Advantages and apply the knowledge in Propulsion field.
d) Classify different types of propulsion systems and concepts applied in nozzle propulsion
e) Understand the types of propulsion and advance propulsion system

518AEE05	Aircraft Rules and Regulation	L T P C 3 0 0 3

COURSE OBJECTIVES :

The Students will be able to

a) Understand the civil air rules and regulations which are being followed by Directorate General of Civil Aviation.
b) Learn about the maintenance certification for the airworthiness of the aircraft.
c) Gain the knowledge on basics of airworthiness and certification and health monitoring
d) Analyze Flight evaluation and Testing Procedures

UNIT I AIRWORTHINESS AND PROCEDURE **9 Periods**

Responsibilities of operators / owners- Procedure of CAR issue, amendments. Objectives and targets of airworthiness directorate; Airworthiness regulations and safety oversight of engineering activities of operators list.

UNIT II AIRCRAFT MAINTENANCE **9 Periods**

Investigation, analysis, rectification and defect reporting and monitoring Analytical study of in-flight readings& recordings; Maintenance control by reliability Method. Aircraft maintenance programmer& their approval; Maintenance of fuel and oil uplift and consumption records – Light aircraft engines; Fixing routine maintenance periods– Initial & revisions.

UNIT III AIRWORTHINESS AND CERTIFICATION **9 Periods**

Air worthiness and continued air worthiness ,Procedure relating to registration of aircraft; Procedure for issue / revalidation of Type Certificate of aircraft and its engines / propeller; Issue / revalidation of Certificate of Airworthiness; Requirements for renewal of Certificate of Airworthiness.

UNIT IV HEALTH AND USAGE MONITORING **9 Periods**

On condition of AME License, its classification, experience requirements, Mandatory, Modifications / Inspections. On condition maintenance of reciprocating engines;

UNIT V FLIGHT EVALUATION **9 Periods**

Flight testing of aircraft, Registration Markings of aircraft; Weight and balance control of an aircraft; Provision of first aid kits & Physician's kit in an aircraft; Use furnishing materials in an aircraft; Concessions; Aircraft log books; Document to be carried on board on Indian registered aircraft; Procedure for issue of tax permit; Procedure for issue of type approval of aircraft components and equipment including instruments.

Total: 45 Periods

COURSE OUTCOMES

Upon completion of this course, students will be able to

a.) Apply the knowledge of Airworthiness regulations and CAR procedures which are being followed by DGCA.
b.) Understand the Issuing of Airworthiness certificate and its requirements of aircraft
c.) Clear analysis of aircraft maintenance.
d.) Determine the Flight evaluation and Testing Procedures techniques for further applications
e.) Classification of maintenance of reciprocating engines

518AEE10 **Aircraft Control Engineering**

L	T	P	C
3	0	0	3

COURSE OBJECTIVES

The Students are able to

a) Understand the Feedback control systems and representation of control systems.
b) Define the basic concepts of Mechanical and electrical components, Development of flight Control systems.
c) Learn the Characteristic Equation and Functions of control system with Sample data Systems.
d) Analyze the concept of stability, bode techniques with frequency response

UNIT I INTRODUCTION **9 Periods**

Historical review – Simple pneumatic, hydraulic and thermal systems, Series and parallel systems, Analogies –Mechanical and electrical components, Development of flight control systems.

UNIT II OPEN AND CLOSED LOOP SYSTEMS **9 Periods**

Feedback control systems – Block diagram representation of control systems, Reduction of block diagrams, Output to input ratios, Signal flow graph.

UNIT III CHARACTERISTIC EQUATION AND FUNCTIONS **9 Periods**

Laplace transformation, Response of systems to different inputs viz., Step input, impulse, ramp, parabolic and sinusoidal inputs, Time response of first and second order systems, steady state errors and error constants of unity feedback circuit.

UNIT IV CONCEPT OF STABILITY **9 Periods**

Necessary and sufficient conditions, Routh – Hurwitz criteria of stability, Root locus and Bode techniques, Concept and construction, frequency response.

UNIT V SAMPLED DATA SYSTEMS **9 Periods**

Introduction to digital control system, Digital Controllers and Digital PID Controllers.

TOTAL: 45 Periods

COURSE OUTCOME

Upon completion of the course, students are able to

(a) Describe the Feedback control systems and representation of control systems
(b) Analyze the basic concepts of Mechanical and electrical components with the Development of flight Control systems
(c) Apply the knowledge of Characteristic Equation and Functions of control system with Sample data Systems An ability to understand the aircraft stability analysis.
(d) Learn the concept of stability, bode techniques with frequency response

518AEP07 **Aircraft Structures Lab II**

L	T	P	C
0	0	2	1

COURSE OBJECTIVE

The Students will be able to

a) Determine the Bending in Symmetric and Unsymmetrical Sections
b) Find the shear center location for open and closed sections
c) Conduct Experiment on photo elastic techniques and vibration of beams
d) Test flexibility matrix for cantilever beam and Beam with combined loading
e) Find the elastic materials and stresses in circular, beams using photo elastic techniques
f) Determine the measurement of vibration of beams and tension field beam experiment

LIST OF EXPERIMENTS

1. Determination of Unsymmetrical bending of different materials using bend test set up.
2. Determination of Shear center location for open sections
3. Determination of Shear center location for closed sections
4. Experiment on Constant strength beam
5. Finding out flexibility matrix for cantilever beam
6. Testing of Beam with combined loading
7. Calibration of Photo- elastic materials
8. Determination of Stresses in circular discs and beams using photo elastic techniques
9. Measurement of Vibrations of beams
10. Wagner beam – Tension field beam experiments.

TOTAL: 45 Periods

COURSE OUTCOME

Upon completion of the course, students will be able to

a) Find the Bending in Symmetric and Unsymmetrical Sections
b) Compute the shear center location for open and closed sections
c) Calculate the Stress values of photo elastic techniques and vibration of beams
d) Analyze the Experiments on flexibility matrix for cantilever beam and Beam with combined loading
e) Calculate the elastic material of calibration of photo and beams (photo elastic techniques)
f) Analyze the vibration of beams and tension field beams

LIST OF EQUIPMENTS

(for a batch of 36 students)

Sl.No	Details of Equipments	Qty Req.	Experiment No.
1.	Unsymmetrical sections like 'Z' sections	2	1, 2, 3
2.	Channel section and angle section	2	1, 2, 3
3.	Dial gauges	10	1, 2, 3
4.	Weights 1Kg	12	1, 2, 3
5.	Weights 2 Kg	10	1,2,3
6.	Beam Test Set – up	2	1, 2, 3
7.	Strain indicator and strain gauges	One set	4,5,6
8.	Photo – elastic apparatus	1	7,8
9.	Amplifier	2	9
10.	Exciter	2	9
11.	Oscilloscope	2	9
12.	Wagner beam set up	1	10

518AEP08 **Propulsion laboratory**

L	T	P	C
0	0	2	1

COURSE OBJECTIVE:

The Students will be able to

a) Understand the basic concepts of aero engines and carry out experiments on diffusers
b) Estimate the Performance of a propellers
c) Determine the Velocity in free jet and wall jet set up
d) Analyze the Flow visualization of water flow channel
e) Understand the basic concepts of aircraft piston engine and jet engine

List of Experiments:

1. Study of an aircraft piston engine (includes study of assembly sub systems, various components, their functions and operating principles)
2. Study of an aircraft jet engine (includes study of assembly of sub systems, various components, their functions and operating principles
3. Performance of 2d diffuser a) Stable Flow b) Separated flow
4. Determine the performance of a propeller
5. Determination of heat of combustion of aviation fuel
6. Combustion performance studies in a duct (duct burner)
7. Determine the Velocity measurements in free jet set up
8. Determine the Velocity measurements in wall jet set up
9. Flow visualization of water flow channel

TOTAL: 45 Periods

COURSE OUTCOME

Upon completion of the course, students will be able to

a) Apply the knowledge of Engine operations in Aeronautical field
b) Analyze the Performance of Propellers
c) Calculate the velocity of free jet and wall jet experiments and Apply in Industrial applications
d) Make use of Flow visualization and categorize the flow based on Reynolds number.
e) Determining the heat of combustion of aviation fuel.

List of Equipment:

(For a batch of 36 students)

S. No	Equipment	Quantity	Experiment No
1	Piston Engine	1	1
2	Jet Engine	1	2
3	2D Diffuser	1 (separated flow) & 1(stable flow)	3
4	Axial Turbine Blade Row Model (with pressure tapping)	1	4
5	Axial compressor Blade Row Model (with pressure tapping)	1	4
6	Water tube manometers with 20 channels	1	9
7	Propeller Model	1	4
8	2D Traverse Mechanism	1	3, 4
9	Free Jet Test Setup	1	7

Chairman
Board of Studies

518AEP09	Aircraft Structures Repair Lab	L T P C 0 0 2 1

COURSE OBJECTIVE

The Students will be able to

a) Conduct Experiment on Patch repair work by using composites
b) Weld the given Material by using TIG and MIG welding setup
c) Make use of sandwich panels for Aircraft industry
d) Use Sheet Metals for Aircraft Body development and other works

LIST OF EXPERIMENTS

1. Patch repair welding using TIG.
2. Patch repair welding using MIG.
3. Patch repair welding using Plasma Arc.
4. Experiment on pipe bending
5. Experiment on Riveted joints & repair work.
6. Experiment on composites & repair work.
7. Repair of Sandwich panels.
8. Exercise on Sheet metal forming.
9. Exercise on cable swaging

TOTAL: 45 Periods

COURSE OUTCOME

Upon completion of the course, students will be able to

a) Learn Patch repair work by using composites
b) Analyze the Weld for the given Material by using TIG and MIG welding setup
c) Use of sandwich panels for Aircraft industry
d) Know the use of Sheet Metals for Aircraft Body development and other works

LIST OF EQUIPMENTS

(For a batch of 36 students)

S.No	Details of Equipments	Qty Req.	Experiment No.
1.	Shear cutter pedestal type	1	6,8
2.	Drilling Machine	1	5,6,8
3.	Bench Vices	1	5,6,8
4.	Radius Bend bars	1	4
5.	Pipe Flaring Tools / Pipe Bending Tools	1	9
6.	Carbide Gas Plant	1	3
7.	MIG Weld Plant	1	2
8.	TIG Weld Plant	1	1
9.	Plasma welding setup	1	3
10.	Cable And Swaging Block	1	9
11.	Sandwich / Composite Panels	5	6,7

Chairman
Board of Studies

618AET01	Composite Materials and Structures	L	T	P	C
		3	0	0	3

COURSE OBJECTIVE

The students will be able to

a) Know the various composite materials and structures used in aircraft Applications and their test methods.
b) Understand the effect of sandwich construction in the aircraft materials and its prevention methods.
c) Knowing about the sandwich construction process and failure modes
d) Learn the various open and closed mould processes and fabrication process.
e) Learn the process of metal matrix and composite material and its applications

UNIT I INTRODUCTION TO COMPOSITE MATERIALS **9 Periods**

Introduction to Composite Materials: Definition, classification and characteristics of composite Materials – fibrous composites, laminated composites, particulate composites. Applications: Automobile, Aircrafts missiles. Space hardware, Electrical and electronics, Marine, recreational and sports equipment, future potential of composites.

UNIT II MICRO AND MACRO ANALYSIS OF COMPOSITES **9 Periods**

Micro Mechanical Analysis of a Lamina: Introduction, Evaluation of the four elastic moduli by Rule of mixture, Numerical problems. Macro Mechanics of a Lamina: Hooke's law for different types of materials, Number of elastic constants, Two - dimensional relationship of compliance and stiffness matrix.

UNIT III SANDWICH CONSTRUCTIONS **9 Periods**

Basic design concepts of sandwich construction -Materials used for sandwich construction – Failure modes of sandwich panels.

UNIT IV FABRICATION PROCESS **9 Periods**

Layup and curing, fabricating process, open and closed mould process, hand lay-up techniques; structural laminate bag moulding, production procedures for bag moulding; filament winding, pultrusion, pulforming, thermo-forming, injection moulding, blow moulding.

UNIT V METAL MATRIX COMPOSITES & CERAMIC COMPOSITES **9 Periods**

Reinforcement materials, types, characteristics and selection base metals selection. Need for production MMC's and its application. Fabrication Process for MMC's: Powder metallurgy technique, liquid metallurgy technique and secondary processing, special fabrication techniques. Ceramic composites & its Applications.

TOTAL: 45 Periods

COURSE OUTCOME

On successful completion of this course, student should be able to

a) Apply the various composite materials and structures used in aircraft Applications and their test methods.
b) Learn simple micromechanics and failure modes of composites.
c) Analyse the effect sandwich construction in the aircraft materials and its prevention methods.
d) Learn the various open and closed mould processes, fabrication process.
e) Construct the methods of manufacturing and analysis of different composite technique.

TEXT BOOKS

1. Jones, R.M., "Mechanics of Composite Materials", McGraw-Hill, Kogakusha Ltd., Tokyo, 2012.

2. Krishnan K Chawla "Mechanics of Composite Materials", McGraw-Hill. 2011.

REFERENCE BOOKS

1. Agarwal, B.D., and Broutman, L.J., "Analysis and Performance of Fibre Composites", John Wiley and sons. Inc., New York, 2010.
2. Lubin, G., "Handbook on Advanced Plastics and Fibre Glass", Von Nostrand Reinhold Co., New York, 2011.
3. Calcote, L R. "The Analysis of laminated Composite Structures", Von – Noastrand Reinhold Company, New York 2008.

Course Outcome		PSO1	PSO2	PSO3	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
Co1	Apply the various composite materials and structures used in aircraft Applications and their test methods.	2	1		3	2	3	1					1		1	
Co2	Learn simple micromechanics and failure modes of composites.	3	1		3	2	3	1		2					1	
Co3	Analyse the effects sandwich construction in the aircraft materials and its prevention methods.	3	1		3	2	3	1			1				1	
Co4	Learn the various open and closed mould processes, fabrication process.	3	1		3	2	3	1							1	
Co5	Construct the methods of manufacturing and analysis of different composite technique.		2		3	2	3	1							1	

Chairman

ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

618AET02	Heat Transfer	L T P C 3 0 0 3

COURSE OBJECTIVE

The students will be able to

a) Know basic study of the phenomena of heat transfer.
b) Develop a knowledge-based design problem requiring the formulations of solid conduction and fluid convection and the technique of numerical computation.
c) Account for the consequence of heat transfer in thermal analyses of engineering systems.
d) The radiative heat transfer that should be learnt in detailed
e) Heat exchangers and heat transfer in aerospace engineering

UNIT I HEAT CONDUCTION **9 Periods**

Basic Modes of Heat Transfer – One dimensional steady state heat conduction: Composite Medium – Critical thickness – Effect of variation of thermal Conductivity – Extended Surfaces – Unsteady state. Heat Conduction: Lumped System Analysis – Heat Transfer in Semi-infinite and infinite solids – Use of Transient – Temperature charts – Application of numerical techniques.

UNIT II CONVECTIVE HEAT TRANSFER **9 Periods**

Review of basic equations of fluid flow – Free convection in atmosphere free convection on a vertical flat plate – Empirical relation in free convection – Forced convection – Laminar and turbulent convective heat transfer analysis in flows between parallel plates, over a flat plate and in a circular pipe. Empirical relations, application of numerical techniques in problem solving.

UNIT III RADIATIVE HEAT TRANSFER **9 Periods**

Basic definitions – concept of black body -Irradiation – total and monochromatic quantities - Laws of Planck, Wien, Kirchhoff, Lambert, Stefan and Boltzmann – laws of black body radiation-radiation between black surfaces –Radiation shape factors – Radiation shields.

UNIT IV HEAT EXCHANGERS **9 Periods**

Classification–Temperature Distribution–Overall heat transfer coefficient, Heat Exchange Analysis – LMTD Method and E-NTU Method. Mechanics of fins and its operations.

UNIT V HEAT TRANSFER PROBLEMS IN AEROSPCAE EGINEERING **9 periods**

High-Speed flow Heat Transfer, Heat Transfer problems in gas turbine combustion chambers – Rocket thrust chambers – Aerodynamic heating – Ablative heat transfer.

TOTAL: 45 Periods

COURSE OUTCOME

On successful completion of this course, student should be able to

a) Derive the equation for temperature distribution in fins, to estimate the rate of heat transfer through conduction through slabs, cylindrical and spherical surface objects.
b) Knowledge about the rate of heat transfer and heat transfer coefficients for forced and free convection Heat transfer problems.
c) Evaluate the radiant heat transfer between solid bodies, black or gray.
d) Perform the LMTD & NTU analysis to the heat exchanger problems, to analyze and design the boiling heat transfer problems.
e) Apply heat transfer principles (conduction, convection and radiation) in solving aerospace engineering problems that are related to heat transfer.

TEXT BOOKS

1. Yunus A. Cengel., "Heat Transfer – A practical approach", Second Edition, Tata McGraw-Hill, 2002.
2. Nag. P.K., "Heat and Mass Transfer", Tata McGraw-Hills Co., Ltd.-2015,

ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

618AET03	Experimental Stress Analysis	L T P C 3 0 0 3

COURSE OBJECTIVE

The students will be able to

a) Knowledge about measuring instruments, factors affecting measurements, errors and corrective measurements.
b) Impart a brief introduction to the emerging techniques like digital image correlation.
c) Study about NDT, Radiography, ultrasonic, magnetic particle inspection, acoustic emission technique, holography, thermograph, fiber optic sensor.
d) Boosting knowledge about photoelasticity of two and three dimensions
e) The fundamentals of non destructive testing and thermograhy

UNIT I MEASUREMENTS **9 Periods**

Introduction to Measuring Instruments, Principles of measurements, Types of Measuring Instruments, Factors affecting measurements, Errors in measurements and corrective actions. Accuracy, Sensitivity and range of measurements.

UNIT II EXTENSOMETERS **9 Periods**

Mechanical, Optical Acoustical and Electrical extensometers and their uses, Advantages and disadvantages.

UNIT III ELECTRICAL RESISTANCE STRAIN GAUGES **9 Periods**

Principle of operation and requirements, Types and their uses, Materials for strain gauge. Calibration and temperature compensation, cross sensitivity, Rosette analysis, Wheatstone bridge and potentiometer circuits for static and dynamic strain measurements, strain indicators.

UNIT IV PHOTOELASTICITY **9 Periods**

Two dimensional photo elasticity, Concept of light – photo elastic effects, stress optic law, Interpretation of fringe pattern, Compensation and separation techniques, Photo elastic materials. Introduction to three dimensional photo elasticity.

UNIT V NON – DESTRUCTIVE TESTING **9 Periods**

Fundamentals of NDT, Radiography, ultrasonic, magnetic particle inspection, Fluorescent penetrant technique, Eddy current testing, Acoustic Emission Technique, Fundamentals of brittle coating methods, Introduction to Moiré techniques, Holography, ultrasonic C- Scan, Thermograph, Fiber – optic Sensors.

TOTAL: 45 Periods

COURSE OUTCOME

On successful completion of this course, student should be able to

a) Understood the Measuring instruments; factors affecting measurements, errors and corrective measurements
b) Demonstrate the principles of different types of extensometers.
c) Analyze the principles of rosettes and gather the requirements of the Strain gauges.
d) Get knowledge about photo elasticity, stress optic law, compensation and separation techniques, interpretation of fringe pattern.
e) Understand NDT, Radiography, ultrasonic, magnetic particle inspection, acoustic emission technique, holograph techniques were studied.

Hosur - 635 109, Tamil Nadu.

618AET04	Finite Element Analysis	L T P C 3 0 0 3

COURSE OBJECTIVES

The students will be able to

a) Understand the concept of numerical analysis of structural components.
b) Utilize of FEA as Engineering solution tool to problems (both vector and scalar) involving various fields for Design Analysis and Optimization.
c) Impart knowledge on both ANSYS, NASTRAN.
d) understanding the concept of one and two dimensional problems
e) The concepts should be understand about the axisymmetric continuum and case studies.

UNIT I INTRODUCTION **9 Periods**

Historical background – Matrix approach – Application to the continuum – Discretisation – Matrix algebra – Gaussian elimination – Governing equations for continuum – Classical Techniques in FEM – Weighted residual method – Ritz method

UNIT II ONE DIMENSIONAL PROBLEMS **9 Periods**

Finite element modelling – Coordinates and shape functions- Potential energy approach – Galarkin approach – Assembly of stiffness matrix and load vector – Finite element equations – Quadratic shape functions – Applications to plane trusses

UNIT III TWO DIMENSIONAL CONTINUUM **9 Periods**

Introduction – Finite element modelling – Scalar valued problem – Poisson equation – Laplace equation – Triangular elements – Element stiffness matrix – Force vector – Galarkin approach - Stress calculation – Temperature effects

UNIT IV AXISYMMETRIC CONTINUUM **9 Periods**

Axis-symmetric formulation – Element stiffness matrix and force vector – Galarkin approach – Body forces and temperature effects – Stress calculations – Boundary conditions – applications to cylinders under internal or external pressures – Rotating discs

UNIT V CASE STUDIES BY USING ANSYS AND NASTRON **9 Periods**

The four node quadrilateral – Shape functions – Element stiffness matrix and force vector – Numerical integration - Stiffness integration – Stress calculations – Four node quadrilateral for axis-symmetric problems.

TOTAL: 45 Periods

COURSE OUTCOME

On successful completion of this course, student should be able to

a) Understood the approximate analytical methods in FEA and concept of numerical analysis of structural components.
b) Analyze the mathematical models for physical system using principle of minimum potential energy / principle of Virtual Work
c) Acquired the finite element attributes, types, different types of boundary Conditions and interpolation functions. (2D & 3D)
d) Application of FEA to simple bars, Truss, Beam and Isoperimetric Element Formulation.
e) Derive global stiffness matrix for triangular plane and they will analyses using ANSYS.

618ME007	Applied Hydraulics and Pneumatics	L T P C 3 0 0 3

PRE-REQUISITES: Knowledge of Engineering Physic I, Basics of Civil and Mechanical Engineering and Fluid Mechanics and Machinery are required.

COURSE OBJECTIVES

The students will be able to

a) Familiar with applications, advantages of the fluid power engineering and transmission systems.

b) Learn the function of fluid power systems in automation for the machine tools and others industrial equipment's like heavy earth movers and construction equipment's.

c) Draw the invention of circuits for hydraulic and pneumatic power systems in the industrial applications.

d) calculating the fluid flow in the components and the system of hydraulics.

e) understand about pneumatic systems.

UNIT I FLUID POWER PRINCIPLES AND FUNDAMENTALS **9 Periods**

Introduction to Fluid power- Advantages and Applications- Types of fluid power systems – Fluid power symbols-Types of fluids- Properties of hydraulics fluids – Applications of Pascal's Law- Principles of flow – Work, Power and Torque-Darcy–Weisbach equation, Losses in pipe, valves and fittings .

UNIT II HYDRAULIC SYSTEMS AND COMPONENTS **9 Periods**

Sources of Hydraulic power: Pumping theory – Pump classification- Variable displacement pumps for Gear pump, Vane pump and Piston pump Construction, working principle, advantages, disadvantages and Performance-Types of hydraulic cylinders- Linear cylinders, Rotary cylinders, construction, working principle, advantages, disadvantages and applications- Cushioning Mechanism in cylinder.

UNIT III CONTROL COMPONENTS, ACCESSORIES OF HYDRAULIC SYSTEMS **9 Periods**

Control Components: Direction control, Flow control and Pressure control valves- Types, Construction and Operation, Applications – Types of actuation- Accessories: Reservoirs, Accumulators, Intensifiers and Pressure Switches- Applications.

UNIT IV PNEUMATIC SYSTEMS AND COMPONENTS **9 Periods**

Properties of air-Compressors- (FRL)Filter, Regulator, Lubricator ,Muffler, Air control Valves, Quick Exhaust valves, Pneumatic actuators, Servo systems and Proportional valves -Introduction the fluidics devices -Pneumatic logic circuits.

UNIT V HYDRAULIC AND PNEUMATIC CIRCUITS AND TROUBLESHOOTING **9 Periods**

Hydraulic circuits: Regenerative (with accumulator devices), Fail-safe, Speed control, Sequence, Electro hydraulic circuits-Case studies of to draw the circuits of hydraulic system for the Shaping and Punching operation (with intensifier device).Pneumatic circuits: Sequential circuit design for simple application (of two or three cylinders) using cascade method-Electro pneumatic circuits- Fluid power circuits failures and troubleshooting.

TOTAL: 45 Periods

COURSE OUTCOMES

On successful completion of this course, student should be able to

a) Gaining the concept of fluid power systems and applications in industries.
b) Understanding the working principle of hydraulic and pneumatic systems.

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

c) Design the hydraulic and pneumatic circuits and exposure of diagnose or troubleshoot the power systems.
d) An ability to apply the applied hydraulics concepts to machining operations like shaping, punching, etc.
e) Recognize the standard symbols of the different components used in fluid power and pneumatics systems.

TEXT BOOKS

618AEE07	Wind Tunnel Techniques	L T P C 3 0 0 3

COURSE OBJECTIVE

The students will be able to

a) Study the principles of model testing
b) Understand the calibration of wind tunnels
c) Learn about the techniques in Flow Visualization
d) Learn about Instrumentation of wind tunnels and measurements
e) Understand the concepts of flow visualization.

UNIT I INTRODUCTION OF WIND TUNNELS **9 Periods**

Classification – Special problems of Testing in Subsonic, Transonic, supersonic and hypersonic speed regions – Layouts – sizing and design parameters.

UNIT II PRINCIPLES OF MODEL TESTING **9 Periods**

Introduction to different models, types of testing, Buckingham Theorem – Non-Dimensional Numbers –Scale Effect Types of Similarities

UNIT III CALIBRATION OF WIND TUNNELS **9 Periods**

Test section speed – Horizontal buoyancy – Flow angularities – Turbulence measurements – Associated instrumentation – Calibration of supersonic tunnels.

UNIT IV INSTRUMENTATION AND MEASUREMENTS, DATA ACTUATING SYSTEMS **9 Periods**

Pressure and velocity measurements – Force measurements – Three component and six component balances – Internal balances.

UNIT V FLOW VISUALIZATION TECHNIQUES **9 Periods**

Smoke and Tuft grid techniques – Dye injection special techniques – Optical methods of flow visualization.

TOTAL: 45 Periods

COURSE OUTCOME

Upon completion of course, students will able to

a) Understood about the Test section speed
b) Describe about the wind tunnel measurements
c) Study the flow visualization in wind tunnel techniques
d) Understand the Calibration of supersonic tunnels.
e) Describe about the model testing in wind tunnel

TEXT BOOKS

1. Rae, W.H. and Pope, A. "Low Speed Wind Tunnel Testing", John Wiley Publication, 2004.

618AEP07	Aircraft Design Lab	L T P C 0 0 2 1

COURSE OBJECTIVE

The students will be able to

a) Compare different configuration of airplanes on Specifications and performance details of aircraft.
b) Prepare comparative data sheets and compare different graph and selection of main parameters for the aircraft design.
c) Calculate the preliminary weight estimations, power plant selection, airfoil selection, wing tail and control surfaces.
d) Estimate the load of the aircraft design.
e) Analysis the design of the aircraft and testing.

LIST OF EXPERIMENTS

1. To study and Construct V-n diagram for the design study
2. Gust and manoeuvrability envelopes
3. Critical loading performance and final V-n graph calculation
4. Structural design study – Theoretical approach
5. Load estimation of wings and fuselage.
6. Balancing and Manoeuvring loads on tail plane, Aileron and Rudder loads.
7. Detailed structural layouts
8. Design of any two components of wings, fuselage
9. Preparation of a detailed design report with CAD drawings.
10. Any one Proto type model of UAV

TOTAL: 45 Periods

COURSE OUTCOME

On successful completion of this course, student should be able to

a) Based upon the mission of the aircraft the students designated for a collection of data are collected from different aircraft having the same mission.
b) Analyze the main design parameter for the aircraft design.
c) Knowledge about the approximate weight of the aircraft that they design by specifying the different types of weight of the aircraft, the types of power plant selected as well as aero foil selection and tail empennage.
d) Evaluate the overall drag of the newly designed aircraft for further calculation on performance of the aircraft.
e) The aircraft analysis should be clarified with the exact graph results and calculations

Hosur - 635 109, Tamil Nadu.

618AEP08	Material Testing Lab	L T P C 0 0 2 1

PRE-REQUISITES: Knowledge of strength of materials is required.

COURSE OBJECTIVE

The students will be able to

a) Knowledge about the basic principles of strength of materials to the undergraduate students through a series of experiments.
b) Understand the fatigue endurance limit or fatigue life and fatigue strength of the materials.
c) Basic concept of testing of materials under untreated and heat treated conditions.
d) Know the failure modes and usage of destructive and nondestructive testing techniques of engineering materials.
e) Understanding the concept of non destructive testing and various types of NDT

LIST OF EXPERIMENTS PART-A

1. Tension test on mild steel rod
2. Double shear test on Mild steel and Aluminium rods
3. Impact test on metal specimen
4. Creep testing of materials
5. Fatigue test on mild steel and Aluminium rods
6. Flexural testing on composite materials

PART-B

7. Preparation of specimen for metallographic examination of different engineering materials. Identification of microstructures of plain carbon steel, tool steel, gray C.I, SG iron, Brass, Bronze & metal matrix composites
8. Heat treatment: Annealing, normalizing, hardening and tempering of steel. Hardness studies of heat-treated samples.
9. To study the wear characteristics of ferrous, non-ferrous and composite material for different parameters.
10. Non-Destructive test experiments like,
    a. Ultrasonic flaw detection.
    b. Magnetic crack detection.
    c. Dye penetrant testing, to study the defects of casted and welded specimens.

TOTAL: 45 Periods

COURSE OUTCOME

On successful completion of this course, student should be able to

a) Acquired the knowledge to perform various mechanical testing.
b) Analyze the microstructure of various engineering materials.
c) Knowledge of performing various non-destructive tests.
d) Describe structures of metallic materials and their effects on mechanical properties.
e) understanding the basic cocepts of aluminium rods of fatigue.

Chairman
Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

LIST OF EQUIPMENTS

(For a batch of 36 students)

Sl.No	Details of Equipment's	Qty Required	For Experiments
1.	Universal Testing Machine	1	1
2.	shear testing machine	1	2
3.	Impact Testing Machine	1	3
4.	Creep testing machine	1	4
5.	fatigue testing machine	1	5
6.	Flexural testing machine	1	6
7.	Scanning Electron Microscopy (SEM/EDS)	1	7
8.	Wear testing machine	1	8
9.	Portable induction heat treatment machine	1	9
10.	NDT Equipment's (Defect scope, Dye-penetrant method, Hot oil Chalk Method, Ultrasonic, Magnetic)	1 each	10

Course Outcome		PSO1	PSO2	PSO3	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
Co1	Acquired the knowledge to perform various mechanical testing.	3	1		3	2	3	1	3						1	
Co2	Analyze the microstructure of various engineering materials	3	1	1	3	2	3	1	3						1	
Co3	. Knowledge of performing various non-destructive tests	2	1		2	2	3	1	3						1	
Co4	Describe structures of metallic materials and their effects on mechanical properties.	3	1	1	3	2	3	1	3						1	
Co5	understanding the basic cocepts of aluminium rods of fatigue	1	2		3	2	3	1	3						1

618AEP09	Aero Engine Repair and Maintenance Laboratory aircraft Design Lab	L	T	P	C
		0	0	2	1

COURSE OBJECTIVES

The students will be able to

a) Understand the basic concept of piston engine components.
b) Know the Importance of Combustor, Propellers and Nozzles in Aircraft Engines.
c) Gain the knowledge about Engine performance and quality testing.
d) The failure modes and the use of destructive and nondestructive testing techniques of engineering materials
e) Learning engine starting procedures and taxing aircraft.

LIST OF EXPERIMENTS

1. Disintegration of an aircraft piston engine.
2. Engine (Piston Engine) - cleaning, visual inspection.
3. Study of Piston Engine Components - dimensional checks.
4. Engine Piston reassembly.
5. Disintegration and study of fuel system of a jet engine
6. Identification of components & trouble shooting of Jet Engine
7. NDT checks and dimensional checks of Jet Engine
8. Engine starting procedures.
9. Ground running of aircraft.
10. NDT checks and dimensional checks of piston engine components.

TOTAL: 45 Periods

COURSE OUTCOMES

After successful completion of this course, the students should be able to

a) Identify the defects in an aircraft's piston engine and jet engine.
b) Start the piston and jet engines of an aircraft with the help of user manuals.
c) Evaluate the performance of various non-destructive tests.
d) Develop the knowledge of Performance of air breathing engines.
e) Develop the knowledge of disintegration of piston engine.

LIST OF EQUIPMENTS

(For a batch of 36 students)

Sl. No	Details of Equipment's	Qty Req.	Experiment No.
1.	Piston Engines	2	1,2,3,4
2.	Jet Aero Engines	2	5,6,7,8
3.	Aircraft with serviceable stand	1	1 to 9
4.	Precision instruments (Vernier Caliper, Micro meter, Cylinder bore gauge, depth gauge, Bevel Protector and DTI	2 each	3,1,7
5.	NDT Equipment's (Defect scope, Dye penetrant method, Hot oil Chalk Method	1 each	7,10

718AET01	Fracture Mechanics and Mechanisms	L	T	P	C
		3	0	0	3

COURSE OBJECTIVE

The students will be able to

a) Obtain the knowledge about mechanical behavior of a material under various loading conditions.
b) Understand concept of stress concentration and able to plot S-N curves for various component fractures.
c) Identify and formulate the stress intensity factor for typical crack configurations.
d) Predict the critical loads that will cause catastrophic failure in a structure.
e) Understand the behavior of material failures and their quality.

UNIT I FRACTURE MECHANICS PRINCIPLES **9 Periods**

Introduction, Mechanisms of Fracture, Tensile Testing, and Crack in structure, Brittle Fracture, Ductile Fracture. Griffith's criterion, modern design – strengths, stiffness and toughness. Stress intensity approach.

UNIT II STRESS ANALYSIS FOR MEMBERS WITH CRACKS **9 Periods**

Linear elastic fracture mechanics, Crack tip stress and deformations, Relation between stress intensity factor and fracture toughness, Stress intensity based solutions. Crack tip plastic zone estimation, Plane stress and plane strain concepts. The Dugdale approach, the thickness effect.

UNIT III ELASTIC – PLASTIC FRACTURE MECHANICS **9 Periods**

Elastic–plastic factor criteria, crack resistance curve, J-integral, Crack opening displacement, crack tip opening displacement. Importance of R-curve in fracture mechanics, experimental determination of J-integral, COD and CTOD.

UNIT IV FATIGUE AND FATIGUE CRACK GROWTH RATE **9 Periods**

Introduction to fatigue, factors Affecting Fatigue, Fatigue loading, various stages of crack propagation, the load spectrum, approximation of the stress spectrum, the crack growth integration, fatigue crack growth laws.

UNIT V FRACTURE TOUGHNESS AND FATIGUE TESTING OF METALS **9 Periods**

Specimen size requirements, various test procedures, effects of temperature, loading rate and plate thickness on fracture toughness. Fracture testing in shear modes, fatigue testing, and NDT methods.

TOTAL: 45 Periods

COURSE OUTCOME

On successful completion of this course, student should be able to

a) Learn and understand the mechanical behavior of a material under various loading conditions
b) Acquire knowledge about the concept of stress concentration and able to plot S-N curves for various component fractures.
c) Have Exposure on nonlinear fracture-mechanics parameters, such as J and T integral.
d) Get Knowledge about the rate of stress concentration statistical aspects of fatigue behaviour and Finite Element analysis.
e) Analyze the effect of fatigue and fracture mechanics to engineering issues.

718AET02	Avionics	L	T	P	C
		3	0	0	3

Pre-requisite: Aircraft Systems and Instruments

COURSE OBJECTIVE

The students will be able to

a) Understand the needs of avionics for both Civil and Military Aircraft.
b) Know the knowledge about digital electronic principles and working operations of digital circuit
c) Integrate the digital electronics with cockpit equipment.
d) Understand the various principles in flight desk and cockpit panels.
e) Study the communication and navigation systems.

UNIT I INTRODUCTION TO AVIONICS **9 Periods**

Need for Avionics in civil and military aircraft and space systems – Integrated Avionics and Weapon system – Typical avionics sub systems – Design and Technologies.

UNIT II PRINCIPLES OF DIGITAL SYSTEMS **9 Periods**

Digital Computers – Microprocessors – Memories- Multiplexers and De-multiplexers-Latches and Flip FlopsCounters-Shift Registers: Memories- A/D and D/A converters

UNIT III DIGITAL AVIONICS ARCHITECTURE **9 Periods**

Avionics system architecture–Data buses MIL–STD 1553 B–ARINC 429–ARINC 629, Avionics Full-Duplex Switched Ethernet.

UNIT IV FLIGHT DECK AND COCKPITS **9 Periods**

Control and display technologies, CRT, LED, LCD, EL and plasma panel - Touch screen - Direct voice input (DVI) - Civil cockpit and Military cockpit: MFDS, HUD, MFK, HOTAS

UNIT V COMMUNICATION AND NAVIGATION SYSTEMS **9 Periods**

Communication Systems: Radio Frequency Spectrum, HF, VHF, UHF, SATCOM, ATC Transponder and Interrogator, TCAS, GPWS, and ADS-B.

Navigation Systems: Classification, VOR/DME, LORAN, RNAV, Doppler and Inertial Navigation, Satellite Navigation, Hybrid Navigation – Approach and Landing aids: ILS, GLS and MLS.

TOTAL: 45 Periods

COURSE OUTCOME

On successful completion of this course, student should be able to

a) Understood the needs of Avionics in Civil, Military Aircraft and Space systems.
b) Apply basic inputs to aircraft digital instruments for efficient output.
c) Knowledge about the various Avionics systems architecture and apply to sub systems in Aircraft.
d) Demonstrate the principles for different displays used in aircraft systems.
e) Awareness of communication and navigation systems and their applications in aircraft.

718AET03	Airline and Airport Management	L	T	P	C
		3	0	0	3

Pre-requisite: Air Traffic Control and Aerodrome Design

COURSE OBJECTIVE

The students will be able to

a) Gain the knowledge about Airline, Airport management principles and their functions.
b) Acquire knowledge about economic parameters in an aviation industry.
c) Understand the basic steps involved in airline, airport scheduling and maintenance.
d) Ensure methods to follow the aircraft maintenance reliability.
e) Apply the product quality technologies to use in aircraft maintenance.

UNIT I AIRLINE AND AIRPORT ADMINISTRATION **9 Periods**

Development of air transportation, comparison with other modes of transport – Role of IATA, ICAO – The general aviation industry airline – Factors affecting general aviation, use of aircraft, airport: airline management and organization – levels of management, functions of management, Principles of organization planning the organization – chart, staff departments & line departments.

UNIT II AIRLINE ECONOMICS **9 Periods**

Forecasting – Fleet size, Fleet planning, the aircraft selection process, operating cost, passenger capacity, load factor etc. – Passenger fare and tariffs – Influence of geographical, economic & political factors on routes and route selection.

Fleet Planning: The aircraft selection process – Fleet commonality, factors affecting choice of fleet, route selection and Capitol acquisition – Valuation & Depreciation – Budgeting, Cost planning – Aircrew evaluation – Route analysis – Aircraft evaluation.

UNIT III PRINCIPLES OF AIRLINES SCHEDULING **9 Periods**

Equipment maintenance, Flight operations and crew scheduling, Ground operations and facility limitations, equipment's and types of schedule – hub & spoke scheduling, advantages / disadvantages & preparing flight plans – Aircraft scheduling in line with aircraft maintenance practices.

UNIT IV AIRCRAFT RELIABILITY **9 Periods**

Aircraft reliability – The maintenance schedule & its determinations – Condition monitoring maintenance – Extended range operations (EROPS) & ETOPS – Ageing aircraft maintenance production.

UNIT V TECHNOLOGY IN AIRCRAFT MAINTENANCE **9 Periods**

Airlines scheduling (with reference to engineering) – Product support and spares – Maintenance sharing – Equipment's and tools for aircraft maintenance – Aircraft weight control – Budgetary control. On board maintenance systems – Engine monitoring – Turbine engine oil maintenance – Turbine engine vibration monitoring in aircraft – Life usage monitoring – Current capabilities of NDT – Helicopter maintenance – Future of aircraft maintenance.

TOTAL: 45 Periods

Board of Studies
Faculty of Aeronautical Engineering
ADHIYAMAAN COLLEGE OF ENGINEERING (Autonomous)
Hosur - 635 109, Tamil Nadu.

COURSE OUTCOME

On successful completion of this course, student should be able to

a) Analyze the design requirements related to Airport Management operations.
b) Estimate the runway requirements for performance of aircraft during takeoff and landing.
c) Understood the functions and operation of the aircraft control, ground electronics airfield lighting, runway and taxi way markings.
d) Appreciate the importance of weather, safety and collision avoidance to ensure Aviation safety and Security.
e) Familiarize with next generation Radar, communication, ATC network and compliance to environmental acts.

718AET04	Vibrations and Aero elasticity	L	T	P	C
		3	0	0	3

Pre-requisite: Engineering Mechanics

COURSE OBJECTIVE

The students will be able to

a) Understand the simple harmonic motion and terminologies involved in D' Alembert's principle of motion.
b) Divide vibrations based on the parameters and their significant measuring instruments.
c) Know the multi degree freedom of a system and its importance.
d) Know the natural frequency of a given object by numerical examples.
e) Understand the application of Aero elasticity and its effects on aircraft components.

UNIT I BASIC NOTIONS **9 Periods**

Simple harmonic motion – Terminologies – Newton's Law – D' Alembert's principle –Energy Methods

UNIT II SINGLE DEGREE OF FREEDOM SYSTEMS **9 Periods**

Free vibrations – Damped vibrations – Forced Vibrations, with and without damping –support excitation – Vibration measuring instruments.

UNITI II MULTI DEGREES OF FREEDOM SYSTEMS **9 Periods**

Two degrees of freedom systems – Static and Dynamic couplings vibration absorber- Principal co-ordinates, Principal modes and orthogonal condition – Eigen value problems. Hamilton's principle- Lagrangian equation and application – Vibration of elastic bodies- Vibration of strings- Longitudinal, Lateral and Torsional vibrations.

UNIT IV APPROXIMATE METHODS **9 Periods**

Rayleigh's and Holzer Methods to find natural frequencies.

UNIT V ELEMENTS OF AEROELASTICITY **9 Periods**

Concepts – Coupling – Aero elastic instabilities and their prevention – Basic ideas on wing divergence, loss and reversal of aileron control – Flutter and its prevention.

TOTAL: 45 Periods

COURSE OUTCOME

On successful completion of this course, student should be able to

a) Understand the basics of vibrations and simple harmonic motion.
b) Differentiate between types of vibrations according to dampness and particle motion.
c) Learn and Understand the need of a multi degrees of freedom particle and its characteristics.
d) Measure the natural frequency of an object by using Rayleigh and Holzer method.
e) Explain the formation of Aileron reversal, flutter and wing divergence.

TEXT BOOKS

718AEE07	High Temperature Materials	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

a) To acquaint the student with the fundamentals of creep.
b) To make the student understand about design with creep resistance.
c) To familiarize the student about fracture, cracks and their mechanics.
d) To introduce to the student about oxidation and corrosion in hot environments.
e) To acquaint the student with various super alloys and other materials.

UNIT I CREEP **9 Periods**

Factors influencing functional life of components at elevated temperatures, definition of creep curve, various stages of creep, metallurgical factors influencing various stages, effect of stress, temperature and strain rate.

UNIT II DESIGN FOR CREEP RESISTANCE **9 Periods**

Design of transient creep time, hardening, strain hardening, expressions of rupture life of creep, ductile and brittle materials, Monk man-Grant relationship.

UNIT III FRACTURE **9 Periods**

Various types of fracture, brittle to ductile from low temperature to high temperature, cleavage fracture, and ductile fracture due to micro void coalescence-diffusion controlled void growth; fracture maps for different alloys and oxides.

UNIT IV OXIDATION AND HOT CORROSION **9 Periods**

Oxidation, Pilling, Bed worth ratio, kinetic laws of oxidation- defect structure and control of oxidation by alloy additions, hot gas corrosion deposit, modified hot gas corrosion, fluxing mechanisms, effect of alloying elements on hot corrosion, interaction of hot corrosion and creep, methods of combat hot corrosion.

UNIT V SUPERALLOYS AND OTHER MATERIALS **9 Periods**

Iron base, Nickel base and Cobalt base super alloys, composition control, solid solution strengthening, precipitation hardening by gamma prime, grain boundary strengthening, TCP phase, embrittlement, solidification of single crystals, Intermetallic, high temperature ceramics.

TOTAL: 45 Periods

COURSE OUTCOMES

On successful completion of this course, students should be able to

a) Acquire knowledge of creep and their different stages of creep curve.
b) Understand the mechanical behavior of material rupture life of brittle and ductile.
c) Analyze the concept of fracture and their mechanics due to elevated temperature.
d) Attain the knowledge about oxidation and hot corrosion by addition of alloy elements.
e) Familiarize the various super alloys and other materials.

718MEO02	Non-destructive Testing and Materials	L	T	P	C
		3	0	0	3

PRE-REQUISITES: Knowledge of Manufacturing technology and Material science are required.

COURSE OBJECTIVES

a) To understand principle behind various NDT techniques.
b) To study about NDT equipments and accessories.
c) To learn working procedures of various NDT techniques.
d) To know the applications and recent trends in NDT.
e) To know about the NDT techniques for flaw detection.

UNIT I INTRODUCTION AND VISUAL INSPECTION TECHNIQUE **9 Periods**

Introduction to various non-destructive methods – Comparison of Destructive and Non destructive Tests, Visual Inspection, Optical aids used for visual inspection, Applications.

UNIT II LIQUID PENETRANT TESTING AND MAGNETIC PARTICLE TESTING **9 Periods**

Physical principles, procedure for penetrant testing, Characteristics of penetrants - Developers, Penetrant testing methods – Applications, Principle of MPT, Magnetising technical and procedure used for testing a component, Equipment used for MPT, Applications

UNIT III EDDY CURRENT TESTING AND ACOUSTIC EMISSION TESTING **9 Periods**

Principles, Instrumentation for ECT, Various Techniques – High sensitivity Techniques, Single, Multi and high frequency ECT, Applications - Principle of AET, AE signal parameters, Applications.

UNIT IV ULTRASONIC TESTING **9 Periods**

Introduction, Principle of operation, Types of Ultrasonic propagation – Ultrasonic probes. Types of Ultrasonic Transducers – Testing Techniques and Inspection methods – Pulse Echo, ABC scans, Transmission angle beam, Testing procedures and its applications.

UNIT V RADIOGRAPHY, COMPARISON AND SELECTION OF NDT METHODS **9 Periods**

Basic principle, Effect of radiation of Film, Radiographic Imaging – Inspection Techniques – Single wall single image, Double wall Penetration & Multiwall Penetration technique – Comparison and selection of various NDT techniques.

TOTAL : 45 Periods

COURSE OUTCOMES

The students will be able to

a) Apply scientific and technical knowledge to the field of non-destructive testing.
b) Use the relevant non-destructive testing methods for various engineering practice.
c) Analyse and interpret the defects to improve the overall quality of products.
d) Develop their skills in inspection of the components.
e) Increase overall reliability of the products by selection of suitable inspection techniques.

718AEP07	Avionics Laboratory	L	T	P	C
		0	0	2	1

Pre-requisite: Digital Electronics and Microprocessor

COURSE OBJECTIVE

Design and implementation of data buses in avionics with MIL – Std. 1553B and remote terminal configuration and their importance in different applications in the field of Avionics.

LIST OF EXPERIMENTS DIGITAL

ELECTRONICS:

1. Addition/Subtraction of binary numbers.
2. Multiplexer/ De- Multiplexer Circuits.
3. Encoder/Decoder Circuits.
4. Timer Circuits, Shift Registers, Binary Comparator Circuits.

MICROPROCESSORS:

5. Addition and Subtraction of 8-bit and 16-bit numbers.
6. Sorting of Data in Ascending & Descending order.
7. Sum of a given series with and without carry.
8. Greatest in a given series & Multi-byte addition in BCD mode. 9. Interface programming with 4 digit 7 segment Display & Switches & LED's. 10. 16 Channel Analog to Digital Converter & Generation of Ramp, Square, Triangular wave by Digital to Analog Converter.

AVIONICS DATA BUSES:

11. Study of Different Avionics Data Buses.
12. MIL-STD – 1553 Data Buses Configuration with Message transfer.
13. MIL-STD – 1553 Remote Terminal Configuration.

TOTAL: 45 Periods

LIST OF EQUIPMENT *(for a batch of 30 students)*

Sl.No	Items	Quantity	Experiment No.
1.	Adder/Subtractor Binary bits Kit	6	1
2.	Timer Kit	6	1
3.	Encoder Kit	6	3
4.	Decoder Kit	6	3
5.	Comparator Kit	6	4
6.	Multiplexer Kit	6	2
7.	De- Multiplexer Kit	6	2
8.	Shift Registers Kit	6	4
9.	Electronic Design Experimenter	6	6,7,9,10
10.	Microprocessor 8085 Kit	9	5,6,7,8,9,10
11.	4 Digit 7 Segment Display	3	6
12.	Switches & LED's Circuit	3	6
13.	16 Channel AD Converter	6	10,9
14.	Digital to Analog Converter	6	10
15.	Cathode Ray Oscilloscope	3	9,10
16.	Regulated Power Supply (5V DC)	9	1,2,3,4

18.	Computers	2	11,12,13

COURSE OUTCOMES

After successful completion of this course, the students should be able to

a) Design and analyze complex digital circuits.
b) Develop and execute assembly language programs using 8085 for any applications.
c) Interface and control stepper motors using 8085 microprocessor.
d) Integrate avionic systems using MIL-STD-1553B data bus.
e) Integrate avionic systems using ARINC 429 data bus.

Course outcome		Ps 01	Ps 02	Ps 03	P 01	P 02	P 03	P 04	P 05	P 06	P 07	P 08	P 09	P 10	P 11	P 12
C01	Design and analyze complex digital circuits	3	2		2	2	2	1					2		1

718AEP07	Aircraft Systems Laboratory	L	T	P	C
		0	0	2	1

Pre-requisite: Aircraft Systems and Instruments

COURSE OBJECTIVE

To train the students "ON HAND" experience in maintenance of various air frame systems in aircraft and rectification of common snags.

LIST OF EXPERIMENTS

1. Aircraft "Jacking Up" procedure.
2. Aircraft "Levelling" procedure.
3. Control System "Rigging check" procedure.
4. Aircraft "Symmetry Check" procedure.
5. "Flow test" to assess of filter element clogging.
6. "Pressure Test" To assess hydraulic External/Internal Leakage.
7. "Functional Test" to adjust operating pressure.
8. "Pressure Test" procedure on fuel system components. 9. "Brake Torque Load Test" on wheel brake units.
10. Maintenance and rectification of snags in hydraulic and fuel systems.

TOTAL: 45 Periods

LIST OF EQUIPMENTS *(for a batch of 36 students)*

S.No	Items	Quantity	Experiment No.
1.	Serviceable aircraft with all above systems	1	1 to 10
2.	Hydraulic Jacks (Screw Jack)	4	4,5,10
3.	Trestle adjustable	1	1,2,4,8
4.	Spirit Level	2	1,2,4,8
5.	Levelling Boards	2	8
6.	Cable Tensiometer	1	8
7.	Adjustable Spirit Level	1	8
8.	Plumb Bob	2	8
9.	Brake load test rig	1	9

COURSE OUTCOMES

After successful completion of this course, the students should be able to

a) Perform aircraft jacking in order to perform maintenance and inspection.
b) Remove and reinstall aircraft wings and undercarriage using manufacturer's manual.
c) Disassemble and assemble sub components of aircraft engines to perform maintenance and inspection.
d) Describe engine ground running procedure.
e) Troubleshoot various systems of aircraft.

718AEP08	Design and Fabrication of Aeromodelling	L	T	P	C
		0	0	2	1

COURSE OBJECTIVES

The students will be able to

a) Define the problem for the project work.
b) Create aircraft system component models using CATIA, AutoCAD, etc.
c) Conduct experiments by considering the constraints such as economics, environment, health and safety.

LIST OF EXPERIMENTS

1. Analyzing the defined problem.
2. Determining the existing solutions.
3. Proposing new solutions.
4. Evaluating all solutions and deciding on a reasonable solution.
5. Implementing the solution.
6. Writing an elaborate report, discussing the results achieved.
7. Making suggestions if any for further work.

TOTAL: 45 Periods

GUIDELINES

1. Selection of a topic or project title in consultation with project guide.
2. Develop a project planning strategy.
3. If it is an industry-sponsored project, a concurrent letter from industry is required.
4. A maximum of 4 students per group will do the project.
5. The project may be done in one of the labs under the supervision of a guide or in the selected industry.
6. At the end of the project, a report will be written and a technical presentation along with demonstration will be made by the students.
7. The report, project demonstration and technical presentation will be evaluated at the end of the semester.

COURSE OUTCOMES

After successful completion of this course, the students should be able to

a) Apply the knowledge of Mathematics, Science, and fundamentals of Aerodynamics, Structures, and Propulsion to identify and formulate the engineering problems in aerospace applications.
b) Analyze and estimate the cost and time
c) Simulate, analyze and interpret data using software tools such as MATLAB, ANSYS fluent, CFX, CFD++, ICEM CFD, GAMBIT, etc.
d) Develop a project planning strategy and work as an individual or as a member on project teams and communicate the results effectively by compiling project reports and presentations.
e) Develop an end product and prepare a technical report/paper.

718AEP12	Industrial internship	L	T	P	C
		0	0	2	1

COURSE OBJECTIVE

a) Engage and motivate student learning.
b) Connect academic concepts and knowledge to skills and responsibilities required for various careers.
c) Develop occupational and employment skills and habits.
d) Contributes to an understanding of how a business/professional organization operates.
e) Allows student access and a chance to become acclimated to various work environments.
f) Establishes desirable work habits, attitudes, and communication skills while developing a sense of responsibility

LIST OF EXPERIMENTS

1. Introduction to professional industrial internship program.
2. Planning of industrial internship program.
3. Dos and Don'ts during an industrial internship program.
4. Time management and document management activities.
5. Essential qualification skills to perform a role.
6. Role playing as an administrator and select the students who fit the roles.
7. Required forms and other official documents to undergo industrial internship.
8. Role playing as a coordinator of industrial internship.
9. Responsibilities to be as an administrator.
10. Handling of critical and stressful situations.

TOTAL: 45 Periods

COURSE OUTCOME

Students will able to

a) Undergo and organize an industrial internship.
b) Handle stressful and critical situation.
c) Efficiently interact with the industry.
d) Efficient decision making
e) Responsibility of administrator

Course outcome		Ps 01	Ps 02	Ps 03	P 01	P 02	P 03	P 04	P 05	P 06	P 07	P 08	P 09	P 10	P 11	P 12

818AET01	Rocket and Missiles	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

The students will be able to

a) Understand the Fundamentals and uses of solid, liquid and hybrid propellants in rocket systems.
b) Describe the drag and lift forces acting on rocket and missile.
c) Predict the solid rocket motors to achieve specific missile mission goals.
d) Understand the launch vehicle booster rocket systems and its separation techniques.
e) Gain the knowledge about selection of materials in rockets and missiles.

UNIT I ROCKETS SYSTEMS **9 Periods**

Ignition System in rockets – Types of Igniters – Igniter Design Considerations – Design Consideration of liquid Rocket Combustion Chamber, Injector Propellant Feed Lines, Valves, Propellant Tanks Outlet and Helium Pressurized and Turbine feed Systems – Propellant Slash and Propellant Hammer - Elimination of Geysering Effect in Missiles – Combustion System of Solid Rockets.

UNIT II AERODYNAMICS OF ROCKETS AND MISSILES **9 Periods**

Airframe Components of Rockets and Missiles – Forces Acting on a Missile While Passing Through Atmosphere – Classification of Missiles – methods of Describing Aerodynamic Forces and Moments – Lateral Aerodynamic Moment – Lateral Damping Moment and Longitudinal Moment of a Rocket – lift and Drag Forces – Drag Estimation – Body Up wash and Downwash in Missiles – Numerical Problems.

UNIT III ROCKET MOTION IN FREE SPACE AND GRAVITATIONAL FIELD **9 Periods**

One Dimensional and Two Dimensional rocket Motions in Free Space and Homogeneous Gravitational Fields – description of Vertical, Inclined and Gravity Turn Trajectories – Determination of range and Altitude Simple Approximations to Burnout Velocity.

UNIT IV STAGING AND CONTROL OF ROCKETS AND MISSILES **9 Periods**

Rocket Vector Control – Methods – Thrust determination – SITVC – Multistaging of rockets – Vehicle Optimization – Stage Separation Dynamics – Separation Techniques.

UNIT V MATERIALS FOR ROCKETS AND MISSILES **9 Periods**

Selection of Materials – Special Requirements of Materials to Perform under Adverse Conditions.

TOTAL: 45 Periods

COURSE OUTCOMES

On successfully completing of this course, students will be able to

a) Design Consideration of liquid Rocket Combustion Chamber and Igniter.
b) Acquire the knowledge about Aerodynamic Forces and Moments. Lateral Damping Moment and Longitudinal Moment of a Rocket.
c) Learn about the 1D and 2D rocket Motions in Free Space and Homogeneous Gravitational Fields.
d) Understood the Vertical, Inclined and Gravity Turn Trajectories in rocket motion and also the rockets Separation Techniques.
e) Familiarize with the selection of suitable materials for different rocket systems

818AEE03	Computer Integrated Manufacturing	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

The students will be able to

a) To impart knowledge about the integration of interdisciplinary fields of computer aided design.
b) To design and analysis various automatic material handling systems.
c) To make the students aware about various techniques of data collection.
d) To understand about the cellular technology.
e) To understand the application of robotics in industry.

UNIT I INTRODUCTION **9 Periods**

Brief introduction to CAD and CAM – Manufacturing Planning, Manufacturing control- Introduction to CAD/CAM – Concurrent Engineering-CIM concepts – Computerized elements of CIM system –Types of production - Manufacturing models and Metrics – Manufacturing Control – Simple Problems – Basic Elements of an Automated system – Levels of Automation – Lean Production and Just-In-Time Production

UNIT II PRODUCTION AND PROCESS PLANNING **9 Periods**

Process planning – Computer Aided Process Planning (CAPP) – Logical steps in Computer Aided Process Planning – Aggregate Production Planning and the Master Production Schedule – Material Requirement planning – Capacity Planning- Control Systems-Shop Floor Control-Inventory Control – Brief on Manufacturing Resource Planning-II (MRP-II) & Enterprise Resource Planning (ERP) - Simple Problems.

UNIT III CELLULAR MANUFACTURING **9 Periods**

Group Technology(GT), Part Families – Parts Classification and coding – Simple Problems in Opitz Part Coding system – Production flow Analysis – Cellular Manufacturing – Composite part concept – Machine cell design and layout – Quantitative analysis in Cellular Manufacturing – Rank Order Clustering Method - Arranging Machines in a GT cell – Hollier Method – Simple Problems.

UNIT IV FLEXIBLE MANUFACTURING SYSTEM AND VEHICLE GUIDANCE **9 Periods**

Types of Flexibility - FMS – FMS Components – FMS Application & Benefits – FMS Planning and Control– Quantitative analysis in FMS – Simple Problems. Automated Guided Vehicle System (AGVS) – AGVS Application – Vehicle Guidance technology – Vehicle Management &Safety.

UNIT V INDUSTRIAL ROBOTICS **9 Periods**

Robot Anatomy and Related Attributes – Classification of Robots- Robot Control systems – End Effectors – Sensors in Robotics – Robot Accuracy and Repeatability - Industrial Robot Applications – Robot Part Programming – Robot Accuracy and Repeatability – Simple Problems.

COURSE OUTCOMES **TOTAL: 45 Periods**

On successful completion of this course, students should be able to

a) Solve the design problems of different type of transfer mechanism.
b) Perform design and analysis of automatic storage and retrieval system.
c) Evaluate the space requirements of different storage system.
d) Design the workstation requirement for unattended operations and automated production system.
e) Optimize the number of machines required for machine cell in a given production system.

818AEE07	Operation Research	L	T	P	C
		3	0	0	3

COURSE OBJECTIVES

Students will able to,

a) The industrial management and techniques of decision making, customer involvement, work-study, incentive schemes.
b) The process improvement, the role of staffing, work study, incentives, health and safety in management.
c) The queuing system and their characteristics.
d) The network construction and other network related topics.
e) The formulation of games and graphical solutions and dominance property.

UNIT I LINEAR PROGRAMMING **9 Periods**

Linear programming, Definition, scope of Operations Research (O.R) approach and limitations of OR Models, Characteristics and phases of OR Mathematical formulation of L.P. Problems. Graphical solution methods.

UNIT II TRANSPORTATION PROBLEM **9 Periods**

Formulation of transportation model, Basic feasible solution using different methods, Optimality Methods, Unbalanced transportation problem, Degeneracy in transportation problems, Applications of Transportation problems. Assignment Problem: Formulation, unbalanced assignment problem, Traveling salesman problem.

UNIT III SEQUENCING & QUEUING THEORY **9 Periods**

Johnson's algorithm, n - jobs to 2 machines, n jobs 3machines, n jobs m machines without passing sequence. 2 jobs n machines with passing. Graphical solutions priority rules.

Queuing system and their characteristics. The M/M/1 Queuing system, Steady state performance analyzing of M/M/ 1 and M/M/C queuing model.

UNIT IV PERT-CPM TECHNIQUES **9 Periods**

Network construction, determining critical path, floats, scheduling by network, project duration, variance under probabilistic models, prediction of date of completion, crashing of simple networks.

UNIT V GAME THEORY **9 Periods**

Formulation of games, Two person-Zero sum game, games with and without saddle point, Graphical solution (2x n, m x 2 game), dominance property

Total:45 periods

COURSE OUTCOMES

On successful completion of this course, student should be able to

a) Recall the history and describe the various management functions.
b) Identify the role of staffing, work study, incentives, health and safety in management.
c) Apply techniques of decision making, customer involvement, work-study, incentive schemes and process improvement.
d) Describe the various management behavioral technique.
e) Acquire the knowledge about graphical solution for all the problems.

818AEP04	PROJECT WORK	L	T	P	C
		0	0	14	10

Course Objective:

Students in a group of three or four will be assigned a project involving – design fabrication – theoretical studies - experimental studies on some problem related to Aeronautical Engineering.

Continuous internal assessment marks for the project will be given during project review meetings. The student has to prepare and present a detailed project report at the end of the semester and give a talk about the work done. End semester examination mark will be based on viva voce examination.

Total: 300 Periods

Course Outcomes:

CO1: The students will be able to think innovatively.

CO2: The students will be able to works as team.

CO3: They will be able to understand the concept of system engineering and product developments.

CO4: They will be in a position to use the theoretical knowledge in the practical applications.

CO5: They will be better placed to be practically exposed in the particular field of the domain, they work.

Course Outcome		PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PS O1	PS O2	PS O3
CO 1	The students will be able to think innovatively.	3	1		2								3			
CO 2	The students will be able to works as team.		3				2									
CO 3	They will be able to understand the concept of system engineering and product developments.	3		3	1											
CO 4	They will be in a position to use the theoretical knowledge in the practical applications.						3								3	
CO 5	They will be better placed to be practically exposed in the particular field of the domain, they work.	2												3
